To Whom it may Concern,

It has been brought to my attention that CBSC is looking to possibly expand the use of NSF 350 systems. I ask to make sure you have documentation supporting real life live use. These systems are new and take much maintenance and could be a public health nuisance. Please put the citizens health (physical and financial) in your consideration. If approved for use and it turns out it shouldn't be on the market. It will affect the integrity of CBSC, and could support the argument of Politics and awards before Public Health and Safety. Sustainable has its awards and own color but Sustainable is actually something that can work on its own with little help and many products painted green do the opposite. They take energy, time and lots of money to maintain. That's not very sustainable to me. Thank you for your time and feel free to contact me for any questions you may have in regards to this item or any involving Plumbing.

Have a good day!
