When a specific chapter of the International Building Code is marked "Not adopted by the State of California" but appears in the code, it may be available for adoption by local ordinance.

Note: Matrix Adoption Tables at the front of each chapter may aid the code user in determining which chapter or sections within a chapter are applicable to buildings under the authority of a specific state agency, but they are not to be considered regulatory.

1.1.12 Validity. If any chapter, section, subsection, sentence, clause or phrase of this code is for any reason held to be unconstitutional, contrary to statute, exceeding the authority of the state as stipulated by statutes or otherwise inoperative, such decision shall not affect the validity of the remaining portion of this code.

~~1103B.1 Scope. Accessibility to buildings or portions of buildings shall be provided for all occupancy classifications except as modified or enhanced by this chapter. Occupancy requirements in this chapter may modify general requirements, but never to the exclusion of them. When a building or facility contains more than one use, the occupancy specific accessibility provisions for each portion of the building or facility shall apply.~~

~~An accessible route of travel complying with Section 1114B.1.2 shall connect all elements and spaces within a building or facility. Multistory buildings and facilities must provide access to each level, including mezzanines, by ramp or passenger elevator complying with Section 1116B. If more than one elevator is provided, each passenger elevator shall comply with Section 1116B.~~

~~Exceptions:~~

- ~~1. Floors or portions of floors not customarily occupied, including, but not limited to, nonoccupiable or employee spaces accessed only by ladders, catwalks, crawl spaces, very narrow passageways or freight (nonpassenger) elevators, and frequented only by service personnel for repair or maintenance purposes, including, but not limited to, elevator pits and elevator penthouses, piping and equipment catwalks, and machinery rooms.~~
- ~~2. The following types of privately funded multistory buildings do not require a ramp or elevator above and below the first floor:~~

 - ~~2.2 Any other privately funded multistoried building that is not a shopping center, shopping mall or the professional office of a health care provider, or a terminal, depot or other station used for specified public transportation, or an airport passenger terminal and that is less than three stories high or less than 3,000 square feet (279 m²) per story if a reasonable portion of all facilities and accommodations normally sought and used by the public in such a building are accessible to and usable by persons with disabilities.~~

~~———— The elevator exception set forth in this section does not obviate or limit in any way the obligation to comply with the other accessibility requirements in this code. For example, floors above or below the accessible ground floor must meet the requirements of this section except for elevator service. If toilet or bathing facilities are provided on a level not served by an elevator, then toilet or bathing facilities must be provided on the accessible ground floor.~~

~~———— If a building or facility is eligible for this exception but a passenger elevator is nonetheless planned, that elevator shall meet the requirements of Section 1116B and shall serve each level in the building. A passenger elevator that provides service from a garage to only one level of a building or facility is not required to serve other levels.~~

~~In existing buildings, where elevators are required by Section 1134B.2 or 1103B.1, if an escalator or stair is installed where none existed previously and major structural modifications are necessary for such installation, then a means of accessible vertical access via ramp, elevator or lift shall be provided.~~

~~1103B.2 Distance to elevators. In new construction of buildings where elevators are required by Section 1103B.1, and which exceed 10,000 square feet (929 m²) on any floor, an accessible means of vertical access via ramp, elevator or lift shall be provided within 200 feet (60 960 mm) of travel of each stair and each escalator. In existing buildings that exceed 10,000 square feet (929 m²) on any floor and in which elevators are required by Sections 1134B.2 and 1103B.1, whenever a newly constructed means of vertical access is provided via stairs or an escalator, an accessible means of vertical access via ramp, elevator or lift shall be provided within 200 feet (60 960 mm) of travel of each new stair or escalator.~~

~~Exception: Stairs used solely for emergency egress.~~

SECTION 1104B

ACCESSIBILITY FOR GROUP A OCCUPANCIES

~~1104B.1 General. All Group A occupancies shall be accessible as provided in this chapter. See also the general requirements in Section 1114B.1.1.~~

~~1104B.2 Assistive listening systems in assembly areas. Assembly areas, conference and meeting rooms shall provide assistive listening systems for persons with hearing impairments as provided in this section.~~

~~Exception: This section does not apply to systems used exclusively for paging, or background music, or a combination of these two uses.~~

- ~~1. Number of personal receivers required. The minimum number of receivers to be provided shall be equal to 4 percent of the total number of seats, but in no case less than two.~~
- ~~2. Types of listening systems. Types of assistive listening systems include, but are not limited to, audio-induction loops, radio frequency systems (AM or FM) and infrared transmission.~~
- ~~3. Location. If the assistive listening system provided is limited to specific areas or seats, then such areas or seats shall be within a 50-foot (15 240 mm) viewing distance of the stage or playing area and shall have a complete view of the stage or playing area.~~
- ~~4. Signage. A sign shall be posted in a prominent place (for example, a customer service counter, ticket booth or assembly area entrance) indicating the availability of assistive listening devices. The sign complying with Section 1117B.5.1, Items 2 and 3 shall include the International Symbol of Access for Hearing Loss complying with Figure 11B-14C and include wording that states "Assistive Listening System Available."~~
- ~~5. Fees and charges. Nothing in this section shall preclude a facility charging for such assistive listening system its usual fee for audiovisual equipment. However, no surcharge may be placed directly on any particular individual with a disability or any group of individuals with disabilities to cover the costs of such equipment.~~
- ~~6. Permanent and portable systems. Permanently installed assistive listening systems are required in areas if (1) they accommodate at least 50 persons or if they have audio-amplification systems, and (2) they have fixed seating. If portable assistive listening systems are used for conference or meeting rooms, the system may serve more than one room. An adequate number of electrical outlets or other supplementary wiring necessary to support a portable assistive listening system shall be provided.~~

~~1104B.3 Auditoriums, assembly halls, theaters and related facilities.~~

~~1104B.3.1 Seating. In all assembly places where seating is provided, there shall be spaces for persons using wheelchairs and semi-ambulant persons, as provided in this section.~~

~~Exceptions:~~

- ~~1. In existing buildings and facilities when the enforcing agency determines that compliance with the seating requirements of this code would create an unreasonable hardship, such requirements shall not apply. When the unreasonable hardship finding is applied, at least 1 percent of the total seating provided shall be accessible to and usable by persons with disabilities who use wheelchairs, and such seating shall comply with the level requirements and the individual space requirements of this code.~~
- ~~2. When an existing theater is subdivided into more than one facility having upper levels not accessible by ramp or elevator, and the enforcing agency determines that full compliance with this code would create an unreasonable hardship, such upper levels need not be made accessible, provided all facilities at grade are accessible and any event, showing of motion pictures or other activities made available to the public in all of the facilities are scheduled to ensure that all such functions are available to the public in the accessible facility.~~

~~1104B.3.2 Accessibility to key facilities. Seating for persons with disabilities shall be accessible from the main lobby or from a primary entrance, together with related toilet facilities.~~

~~1104B.3.3 Variety of locations. Accessible seating or accommodations in places of public amusement and resort, including theaters, concert halls and stadiums, shall be provided in a variety of locations so as to provide persons with disabilities a choice of admission prices otherwise available to members of the general public.~~

~~1104B.3.4 Wheelchair spaces.~~

- ~~1. The number of such spaces is as shown in Table 11B-1.~~

**TABLE 11B-1
WHEELCHAIR SEATING SPACES**

| SEATING CAPACITY | NO. OF WHEELCHAIR SEATING SPACES |
|------------------|---|
| 4 to 25 | 1 |
| 26 to 50 | 2 |
| 51 to 150 | 4 |
| 151 to 300 | 5 |
| 301 to 500 | 6 |
| 501 to 5,000 | 6 plus 1 for each 100, or fraction thereof, between 501 through 5,000 |
| 5,001 and over | 46, plus 1 for each 200, or fraction thereof, over 5,000 |

- ~~3. The ground or floor at spaces shall be level and shall comply with Section 1124B.~~

~~1104B.3.5 Placement of wheelchair locations. Wheelchair areas shall be an integral part of any fixed seating plan, and shall be arranged so as to provide persons with disabilities a choice of admission prices and lines of sight comparable to those for members of the general public. Each wheelchair area shall adjoin an accessible route which shall also serve as a means of egress in case of emergency. At least one companion fixed seat shall be provided next to each wheelchair seating area. When the seating capacity exceeds 300, wheelchair spaces shall be provided in more than one location in addition to complying with Section 1104B.3.3.~~

Exceptions:

- ~~1. Accessible viewing positions where seating capacity is less than 300 may be clustered for bleachers, balconies and other areas having sight lines that require slopes of greater than one unit vertical in 20 units horizontal (5 percent slope). Equivalent accessible viewing positions may be located on levels having accessible egress.~~
- ~~2. Where it is determined that dispersing accessible seating throughout an existing assembly area would create an unreasonable hardship, accessible seating areas may be clustered. Each accessible seating area shall have provisions for companion seating and shall be located on an accessible route that also serves as a means of emergency egress.~~

~~1104B.3.6 Size of wheelchair location. Each wheelchair location shall provide minimum clear floor or ground space as shown in Figure 11B-15, and shall adjoin an egress aisle on at least one side.~~

~~1104B.3.7 Removable seats. Readily removable seats may be installed in these wheelchair spaces when such spaces are not required to accommodate wheelchair users.~~

~~1104B.3.8 Seating for semi-ambulant individuals. In addition to spaces provided for wheelchair users as noted in Sections 1104B.3.4 through 1104B.3.7 above, there shall be provided seating for semi-ambulant individuals. The number of such seating shall be equal to at least 1 percent of the total seating and shall be no fewer than two. Such seats shall provide at least 24 inches (610 mm) clear leg space between the front of the seat to the nearest obstruction or to the back of the seat immediately in front.~~

~~1104B.3.9 Designated aisle seats. In addition to the wheelchair spaces required, 5 percent, but not less than one, of all aisle seats, shall be designated aisle seats with no armrests on the aisle side, or with removable or folding armrests on the aisle side. The designated aisle seats shall be those located closest to accessible routes. Each such seat shall be identified by a sign or marker with the International Symbol of Accessibility (see Figure 11B-6). Signage notifying patrons of the availability of such seats shall be posted at the ticket office. Signs and markers shall comply with Section 1117B.5.1 Items 2 and 3, as applicable.~~

Division II – SITE ACCESSIBILITY

SECTION 1127B

EXTERIOR ROUTES OF TRAVEL

~~1127B.1 General. Site development and grading shall be designed to provide access to all entrances and exterior ground floor exits, and access to normal paths of travel, and where necessary to provide access, shall incorporate pedestrian ramps, curb ramps, etc. Access shall be provided within the boundary of the site from public transportation stops, accessible parking spaces, passenger loading zones if provided, and public streets or sidewalks. When more than one building or facility is located on a site, accessible routes of travel complying with Section 1114B.1.2 shall be provided between buildings and accessible site facilities, accessible elements, and accessible spaces that are on the same site. The accessible route of travel shall be the most practical direct route between accessible building entrances, accessible site facilities and the accessible entrance to the site. If access is provided for pedestrians from a pedestrian tunnel or elevated walkway, entrances to the building from each tunnel or walkway must be accessible.~~

Exceptions:

- ~~1. Where the enforcing agency determines that compliance with these regulations would create an unreasonable hardship because of topography, natural barriers, etc., an exception may be granted when equivalent facilitation is provided through the use of other methods and materials.~~
- ~~2. In existing buildings, this section shall not apply in those conditions where, due to legal or physical constraints, the site of the project would not allow compliance with these regulations or equivalent facilitation without creating an unreasonable hardship. See Section 109.1.5 1.9.1.5.~~

~~1127B.2 Design and construction. When accessibility is required by this section, it shall be designed and constructed in accordance with this Building Code. See Section 1114B.1 for a list of applicable sections.~~

~~1127B.3 Signs. At every primary public entrance and at every major junction where the accessible route of travel diverges from the regular circulation path along or leading to an accessible route of travel, entrance or facility, there shall be a sign displaying the International Symbol of Accessibility. Signs shall indicate the direction to accessible building entrances and facilities and shall comply with the requirements found in Sections 1117B.5.1 Item 2 and 1117B.5.8.1.~~

~~1127B.4 Outside stairways. See Section 1133B.4.~~

~~1127B.5 Curb ramps.~~

- ~~1. General. Curb ramps shall be constructed at each corner of street intersections and where a pedestrian way crosses a curb. Built-up curb ramps shall be located so that they do not project into vehicular traffic lanes. The preferred and recommended location for curb ramps is in the center of the crosswalk of each street corner. Where it is necessary to locate a curb ramp in the center of the curb return and the street surfaces are marked to identify pedestrian crosswalks, the lower end of the curb ramp shall terminate within such crosswalk areas. See Figure 11B-20C, Case E and Figure 11B-22.~~
- ~~2. Width of curb ramps. Curb ramps shall be a minimum of 4 feet (1219 mm) in width and shall lie, generally, in a single sloped plane, with a minimum of surface warping and cross slope.~~
- ~~3. Slope of curb ramps. The slope of curb ramps shall not exceed one unit vertical in 12 units' horizontal (8.33 percent slope). The slope shall be measured as shown in Figure 11B-20E. Transitions from ramps to walks, gutters or streets shall be flush and free of abrupt change. Maximum slopes of adjoining gutters, road surface immediately adjacent to the curb ramp, or accessible route shall not exceed one unit vertical in 20 units' horizontal (5 percent slope) within 4 feet (1219 mm) of the bottom of the curb ramp. The slope of the fanned or flared sides of curb ramps shall not exceed one unit vertical in 10 unit's horizontal (10 percent slope).~~
- ~~4. Level landing. A level landing 4 feet (1219 mm) deep shall be provided at the upper end of each curb ramp over its full width to permit safe egress from the ramp surface, or the slope of the fanned or flared sides of the curb ramp shall not exceed one unit vertical in 12 units horizontal (8.33 percent slope).~~
- ~~5. Finish. The surface of each curb ramp and its flared sides shall comply with Section 1124B, Ground and Floor Surfaces, and shall be of contrasting finish from that of the adjacent sidewalk.~~
- ~~6. Border. All curb ramps shall have a grooved border 12 inches (305 mm) wide at the level surface of the sidewalk along the top and each side approximately $\frac{3}{4}$ inch (19 mm) on center. All curb ramps constructed between the face of the curb and the street shall have a grooved border at the level surface of the sidewalk. See Figures 11B-19A and 11B-19B.~~
- ~~7. Detectable warnings. Curb ramps shall have a detectable warning that extends the full width and depth of the curb ramp, excluding the flared sides, inside the grooved border. Detectable warnings shall be slip-resistant and consist of raised truncated domes with a diameter of nominal 0.9 inch (22.9 mm) at the base tapering to 0.45 inch (11.4 mm) at the top, a height of nominal 0.2 inch (5.08 mm) and a center-to-center spacing of nominal 2.35 inches (59.7 mm) in compliance with Figure 11B-23A. "Nominal" here shall be in accordance with Section 12-11A and B-102, State Referenced Standards Code. The detectable warning shall contrast visually with adjoining surfaces, either light-on-dark or dark-on-light. The material used to provide contrast shall be an integral part of the walking surface. The domes may be constructed in a variety of methods, including cast in place or stamped, or may be part of a prefabricated surface treatment.~~

~~Only approved DSA-AC detectable warning products and directional surfaces shall be installed as provided in the California Code of Regulations (CCR), Title 24, Part 1, Articles 2, 3 and 4. Refer to CCR Title 24, Part 12, Chapter 12-11A and B, for building and facility access specifications for product approval for detectable warning products and directional surfaces.~~

~~Detectable warning products and directional surfaces installed after January 1, 2001, shall be evaluated by an independent entity, selected by the Department of General Services, Division of the State Architect Access Compliance, for all occupancies, including transportation and other outdoor environments, except that when products and surfaces are for use in residential housing, evaluation shall be in consultation with the Department of Housing and Community Development. See Government Code Section 4460.~~

- ~~8. Obstructions. Curb ramps shall be located or protected to prevent their obstruction by parked vehicles.~~
- ~~9. Diagonal curb ramps. If diagonal (or corner-type) curb ramps have returned curbs or other well-defined edges, such edges shall be parallel to the direction of pedestrian flow. The bottom of diagonal curb ramps shall have 48 inches (1219 mm) minimum clear space as shown in Figure 11B-22(c) and (d). If diagonal curb ramps are provided at marked crossings, the 48-inch (1219 mm) clear space shall be within the markings [see Figure 11B-22(c) and (d)]. If diagonal curb ramps have flared sides, they shall also have at least a 24 inch (610 mm) long segment of straight curb located on each side of the curb ramp and within the marked crossing [see Figure 11B-22 (c)].~~

Notes:

- ~~1. For additional curb details, see Figures 11B-19A and 11B-19B.~~
- ~~2. If the distance from curb to back of sidewalk is too short to accommodate a ramp and a 4 foot (1219 mm) platform as in Figure 11B-20A, Case A, the sidewalk may be depressed longitudinally as in Figure 11B-20A, Case B, or Figure 11B-20B, Case C, or may be widened as in Figure 11B-20B, Case D.~~
- ~~3. If the sidewalk is less than 5 feet (1524 mm) wide, the full width of the sidewalk shall be depressed as shown in Figure 11B-20B, Case C.~~
- ~~4. As an alternate to Figure 11B-20A, Case A, one ramp may be placed in the center of the curb return as in Figure 11B-20C, Case E.~~
- ~~5. When a ramp is located in the center of a curb return, the crosswalk configuration must be similar to that shown on the plan to accommodate wheelchairs. See Figure 11B-22.~~
- ~~6. If the planting area width is equal to or greater than the ramp length, the ramp side slope distance equals 3 feet (914 mm). See Figure 11B-20D, Case G.~~
- ~~7. For Figure 11B-20C, Case F, and Figure 11B-20D, Case G, the longitudinal portion of the sidewalk may need to be depressed as shown in Figure 11B-20A, Case B.~~
- ~~8. If located on a curve, the sides of the ramp need not be parallel, but the minimum width of the ramp shall be 4 feet (1219 mm).~~
- ~~9. The ramp shall have a 12-inch-wide (305 mm) border with ¼-inch (6 mm) grooves approximately ¾ inch (19 mm) on center. See grooving detail, Figure 11B-20D, Case H.~~

~~_____ Pedestrian ramps on pedestrian grade separations shall comply with the requirements of Section 1133B.5 for ramps.~~

~~_____ Cross slopes of walking surfaces shall be the minimum possible and shall not exceed one unit vertical in 50 unit's horizontal (2 percent slope). The slope of any appreciably warped walking surface shall not exceed one unit vertical in 12 unit's horizontal (8.33 percent slope) in any direction. Where pedestrian grade separations cross streets or other vehicular traffic ways, and where a street level crossing can reasonably and safely be used by persons with physical disabilities, there shall be provided conforming curb ramps and a usable pathway.~~

~~_____ Exceptions:~~

- ~~1. When the grade differential of the walking surface of a pedestrian grade separation exceeds 14 feet (4267 mm) due to required height clearance and grade conditions, and the enforcing agency finds that because of right-of-way restrictions, topography or natural barriers, wheelchair accessibility or equivalent facilitation would create an unreasonable hardship, such accessibility need not be provided. However, the requirements in these regulations relating to other types of mobility shall be complied with.~~
- ~~2. For existing facilities, this section shall not apply where, due to legal or physical constraints, the site of the project will not allow compliance with these regulations or equivalent facilitation without creating an unreasonable hardship. See Section 1.9.1.5.~~

SECTION 1129B ACCESSIBLE PARKING REQUIRED

~~1129B.1 General. Each lot or parking structure where parking is provided for the public as clients, guests or employees, shall provide accessible parking as required by this section. Accessible parking spaces serving a particular building shall be located on the shortest accessible route of travel (complying with Section 1114B.1.2) from adjacent parking to an accessible entrance. In parking facilities that do not serve a particular building, accessible parking shall be located on the shortest accessible route of travel to an accessible pedestrian entrance of the parking facility. In buildings with multiple accessible entrances with adjacent parking, accessible parking spaces shall be dispersed and located closest to the accessible entrances. Table 11B-6 establishes the number of accessible parking spaces required.~~

~~1129B.2 Medical Care Outpatient Facilities. At facilities providing medical care and other services for persons with mobility impairments, parking spaces complying with this section shall be provided in accordance with Table 11B-6 except as follows:~~

- ~~1. Outpatient units and facilities. Ten percent of the total number of parking spaces provided shall serve each such outpatient unit or facility.~~
- ~~2. Units and facilities that specialize in treatment or services for persons with mobility impairments. Twenty percent of the total number of parking spaces provided shall serve each such unit or facility.~~

~~1133B.4.2.4 The orientation of at least one handrail shall be in the direction of the run of the stair and perpendicular to the direction of the stair nosing, and shall not reduce the minimum required width of the stairs.~~

~~1133B.4.2.5 Handrails projecting from a wall shall have a space of 1-½ inches (38 mm) between the wall and the handrail.~~

~~Handrails may be located in a recess if the recess is a maximum of 3 inches (76 mm) deep and extends at least 18 inches (457 mm) above the top of the rail. Handrails shall not rotate in their fittings. See Figure 11b-36(b).~~

~~1133B.4.2.6 Handgrips. The handgrip portion of handrails shall be not less than 1-¼ inches (32 mm) nor more than 1-½ inches (38 mm) in cross-sectional nominal dimension or the shape shall provide an equivalent gripping surface. The handgrip portion of handrails shall have a smooth surface with no sharp corners. Gripping surfaces (top or sides) shall be uninterrupted by newel posts, other construction elements or obstructions. Adjacent elements shall be positioned to provide unobstructed use of handrails. Any wall or other surface adjacent to the handrail shall be free of sharp or abrasive elements. Edges shall have a minimum radius of ¼ inch (3.2 mm). See Figure 11b-36.~~

~~Exceptions:~~

- ~~1. In existing buildings when the enforcing agency determines that compliance with any requirement under Section 1133B.4.2 would create an unreasonable~~

~~hardship, an exception to the requirement for persons with disabilities may be granted when equivalent facilitation is provided~~

- ~~2. These regulations shall not apply in existing buildings where legal or physical constraints will not allow compliance with these regulations or equivalent facilitation without creating an unreasonable hardship. See Section 1.9.1.5.~~

~~1133B.4.3 Tactile floor identification signs that comply with Section 1117B.5 Item 1 shall be located at each floor level landing in all enclosed stairways in buildings two or more stories in height to identify the floor level. At exit discharge level, the sign shall include a raised five pointed star located to the left of the identifying floor level. The outside diameter of the star shall be the same as the height of the raised characters.~~

~~1133B.4.4 Striping for the visually impaired. Interior stairs shall have the upper approach and lower tread marked by a stripe providing clear visual contrast. Exterior stairs shall have the upper approach and all treads marked by a stripe providing clear visual contrast. See Figures 11b-35,~~

~~The stripe shall be a minimum of 2 inches (50.8 mm) wide to a maximum of 4 inches (101.6 mm) wide placed parallel to, and not more than 1 inch (25.4 mm) from, the nose of the step or upper approach. The stripe shall extend the full width of the step or upper approach and shall be of a material that is at least as slip resistant as the other treads of the stair. A painted stripe shall be acceptable.~~

~~1133B.4.5 Stair treads, risers and nosing. Stair treads shall be no less than 11 inches (279 mm) deep, measured from riser to riser. Stair riser heights shall be 7 inches (187 mm) maximum and 4 inches (102 mm) minimum. On any given flight of stairs, all steps shall have uniform riser height and uniform tread widths.~~

~~1133B.4.5.1 Treads. All tread surfaces shall be slip resistant. Weather exposed stairs and their approaches shall be designed so that water will not accumulate on the walking surfaces. Treads shall have smooth, rounded or beveled exposed edges. See Figure 11b-35.~~

~~1133B.4.5.2 Risers. Risers shall be solid and shall be vertical [see Figure 11B-35(a)] or sloped from the underside of the leading edge of the tread above at an angle not more than 30 degrees (0.52 rad) from the vertical [see Figure 11B-35(b)]. Open risers are not permitted.~~

~~Exceptions:~~

- ~~1. On exterior stairways, an opening of not more than ½ inch (12.7 mm) may be permitted between the base of the riser and the tread.~~
- ~~2. On exterior stairways, risers constructed of grating containing openings of not more than ½ inch (12.7 mm) may be permitted.~~

~~1133B.4.5.3 Nosing. The radius of curvature at the leading edge (nosing) of the tread shall be no greater than ½ inch (12.7 mm). Beveling of nosings shall not exceed ½ inch (12.7 mm). Nosings shall not project more than 1¼ inches (31.8 mm) past the face of the riser below. Nosings that project beyond risers shall have the underside of the leading edge beveled at an angle not more than 30 degrees (0.52 rad) from the vertical (see Figure 11B-35(c)). The transition from the nosing to the riser shall be free of abrupt edges. All projections shall be of uniform size, including nosings at landings.~~

~~Exceptions:~~

- ~~1. In existing buildings there is no requirement to retroactively alter existing nosing projections of 1½ inches (38.1 mm) which were constructed in compliance with the building code in effect at the time of original construction.~~
- ~~2. In existing buildings, when the enforcing agency determines that compliance with any requirement under this section would create an unreasonable hardship, an exception to persons with disabilities requirements may be granted when equivalent~~

~~facilitation is provided.~~

- ~~3. These regulations shall not apply to existing buildings when legal or physical constraints will not allow compliance with these regulations or equivalent facilitation without creating an unreasonable hardship. See Section 1.9.1.5.~~

~~1133B.5 Ramps.~~

~~1133B.5.1 General. Ramps shall conform to the provisions of this section. Any accessible route of travel shall be considered a ramp if its slope is greater than one unit vertical in 20 units horizontal (5-percent slope).~~

~~1133B.5.2 Width. Ramps shall have a minimum clear width of 48 inches (1219 mm), unless required to be wider by some other provision of this code. Ramps serving entrances to buildings where the ramp is the only exit/discharge path and serves an occupant load of 300 or more shall have a minimum clear width of 60 inches (1524 mm). Ramps serving Group R occupancies may be 36 inches (914 mm) clear width when the occupant load is 50 or less.~~

~~1133B.5.3 Slope. The least possible slope shall be used for any ramp. The maximum slope of a ramp shall be one unit vertical in 12 unit's horizontal (8.33-percent slope). The maximum rise for any run shall be 30 inches (762 mm). Examples of ramp dimensions are as follows:~~

| SLOPE | MAXIMUM RISE | MAXIMUM LENGTH |
|------------------|-------------------------------|---------------------------------|
| 1:12 | 30 inches (762 mm) | 30 feet (9144 mm) |
| 1:13 | 30 inches (762 mm) | 32.5 feet (9906 mm) |
| 1:14 | 30 inches (762 mm) | 35 feet (10668 mm) |
| 1:15 | 30 inches (762 mm) | 37.5 feet (11430 mm) |
| 1:16 | 30 inches (762 mm) | 40 feet (12192 mm) |
| 1:17 | 30 inches (762 mm) | 42.5 feet (12954 mm) |
| 1:18 | 30 inches (762 mm) | 45 feet (13716 mm) |
| 1:19 | 30 inches (762 mm) | 47.5 feet (14478 mm) |

~~1133B.5.3.1 The cross slope of ramp surfaces shall be no greater than 1 unit vertical in 50 unit's horizontal (2-percent slope).~~

~~1133B.5.4 Landings. Level ramp landings shall be installed as follows:~~

~~1133B.5.4.1 Location of landings. Level ramp landings shall be provided at the top and bottom of each ramp. Intermediate landings shall be provided at intervals not exceeding 30 inches (762 mm) of vertical rise and at each change of direction. Landings are not considered in determining the maximum horizontal distance of each ramp. Landings shall be level as specified in the definition of "level area" in Section 1102B.~~

~~1133B.5.4.2 Size of top and bottom landings. Top landings shall be not less than 60 inches (1524 mm) wide and shall have a length of not less than 60 inches (1524 mm) in the direction of ramp run. Landings at the bottom of ramps shall have a dimension in the direction of ramp run of not less than 72 inches (1829 mm).~~

~~1133B.5.4.3 Doors at ramp landings. Doors at ramp landings shall comply with the maneuvering clearance requirements of Section 1133B.2.4.2, and the requirements of Section 1133B.5.4.4.~~

~~1133B.5.4.4 Encroachment of doors at ramp landings. Doors in any position shall not reduce the minimum dimension of the ramp landing to less than 42 inches (1067 mm) and shall not reduce the required width by more than 3 inches (76 mm) when fully open. See Figure 11B-39(b).~~

~~1133B.5.4.5 Landing width. At bottom and intermediate landings, the width shall be at least the same~~

~~as required for the ramps.~~

~~1133B.5.4.6 Change of direction. Intermediate and bottom landings at a change of direction shall have a dimension in the direction of ramp run of not less than 72 inches (1829 mm) to accommodate the handrail extension.~~

~~1133B.5.4.7 Other intermediate landings. Other intermediate landings shall have a dimension in the direction of ramp run of not less than 60 inches (1524 mm).~~

~~1133B.5.4.8 For existing ramps or ramps not covered by Section 1133B.5.4.1, landings shall be provided as set forth in Section 1133B.5.4.1.~~

~~1133B.5.4.9 Hazards. Required ramps shall have a curb at least 2 inches (51 mm) high, or a wheel guide rail 2 to 4 inches (51 to 102 mm) high on each side of the ramp landing that has a vertical drop exceeding 4 inches (102 mm) and that is not bounded by a wall or fence.~~

~~1133B.5.5 Handrails for ramps.~~

~~1133B.5.5.1 Handrails are required on ramps that provide access if slope exceeds one unit vertical in 20 units horizontal (5-percent slope). Handrails shall be placed on each side of each ramp, shall be continuous the full length of each ramp run, shall be 34 to 38 inches (864 to 965 mm) above the ramp surface to the top of the handrails, shall extend a minimum of 1 foot (305 mm) beyond the top and bottom of the ramp and shall be parallel with the floor or ground surface. The extensions of handrails shall be in the same direction of the ramp runs. The inside handrail on switchback or dogleg ramps shall always be continuous. Handrails may project into the required clear width a distance of 3-½ inches (89 mm) maximum from each side of a ramp at the handrail height. The ends of handrails shall be either rounded or returned smoothly to floor, wall or post. Handrails projecting from a wall shall have a space of 1-½ inches (38 mm) between the wall and the handrail. Handrails may be located in a recess if the recess is a maximum of 3 inches (76 mm) deep and extends at least 18 inches (457 mm) above the top of the rail. The grip portion shall not be less than 1-¼ inches (32 mm) nor more than 1-½ inches (38 mm) in cross-sectional nominal dimension or the shape shall provide an equivalent gripping surface, and all surfaces shall be smooth with no sharp corners. Adjacent elements shall be positioned to provide unobstructed use of handrails at the specified locations. Handrails shall not rotate within their fittings. Any wall or other surface adjacent to the handrail shall be free of sharp or abrasive elements. Edges shall have a minimum radius of 1/8 inch (3 mm). See Figure 11B-27.~~

~~Exceptions:~~

- ~~1. Handrails at ramps immediately adjacent to fixed seating in assembly areas are not required.~~
- ~~2. Curb ramps do not require handrails.~~
- ~~3. At door landings, handrails are not required on ramp runs less than 6 inches (152 mm) in rise or 72 inches (1829 mm) in length.~~

~~1133B.5.5.1.1 Ramp handrails. In existing buildings or facilities, where the extension of the handrail in the direction of the ramp run would create a hazard, the extension on the handrail may be turned 90 degrees to the run of the ramp.~~

~~1133B.5.6 Guide curbs and wheel guide rails. Where the ramp surface is not bounded by a wall, guide curbs in compliance with Section 1133B.5.6.1 or wheel guide rails in compliance with Section 1133B.5.6.2, shall be provided.~~

~~Where handrails or guards are attached to the ramp surface with posts or similar elements, provide guide curbs in compliance with Section 1133B.5.6.1 or wheel guide rails in compliance with Section 1133B.5.6.2.~~

~~—To prevent wheel entrapment, guide curbs or wheel guide rails shall provide a continuous and uninterrupted barrier along the length of the ramp.~~

~~1133B.5.6.1 A guide curb a minimum of 2 inches (51 mm) in height above the ramp surface.~~

~~1133B.5.6.2 A wheel guide rail centered 3 inches (76 mm) plus or minus 1 inch (25 mm) above the ramp surface.~~

~~1133B.5.7 Guards. Ramps more than 30 inches (762 mm) above the adjacent ground shall be provided with guards that comply with Section 1013. Such guards shall be continuous from the top of the ramp to the bottom of the ramp.~~

~~1133B.5.8 Outdoor ramps. Outdoor ramps and their approaches shall be designed so that water will not accumulate on walking surfaces.~~

~~1133B.6 Aisles.~~

~~1133B.6.1 General. Every portion of every building in which are installed seats, tables, merchandise, equipment or similar materials shall be provided with aisles leading to an exit.~~

~~1133B.6.2 Width. Every aisle shall not be less than 36 inches (914 mm) wide if serving only one side, and not less than 44 inches (1118 mm) wide if serving both sides. In addition, aisles shall comply with Figure 11B-5E(a) and (b) for circulation around obstructions.~~

~~1133B.7 Walks and Sidewalks.~~

~~1133B.7.1 Continuous surface. Walks and sidewalks subject to these regulations shall have a continuous common surface, not interrupted by steps or by abrupt changes in level exceeding ½ inch (12.7 mm) (see Section 1133B.7.4), and shall be a minimum of 48 inches (1219 mm) in width. If a walk or sidewalk has less than 60 inch (1525 mm) clear width, then passing spaces at least 60 inches by 60 inches (1525 mm by 1525 mm) shall be located at reasonable intervals not to exceed 200 feet (61 m). A T-intersection is an acceptable passing place. Surfaces shall be slip-resistant as follows:~~

~~Exception: When, because of right-of-way restrictions, natural barriers or other existing conditions, the enforcing agency determines that compliance with the 48-inch (1219 mm) clear sidewalk width would create an unreasonable hardship, the clear width may be reduced to 36 inches (914 mm).~~

~~1133B.7.1.1 Slopes less than 6 percent. Surfaces with a slope of less than 6 percent slope shall be at least as slip-resistant as that described as a medium salted finish.~~

~~1133B.7.1.2 Slopes 6 percent or greater. Surfaces with a slope of 6 percent slope shall be slip-resistant.~~

~~1133B.7.1.3 Surface cross slopes. Surface cross slopes shall not exceed one unit vertical in 50 unit's horizontal (2 percent slope).~~

~~1133B.7.2 Gratings. Walks, sidewalks and pedestrian ways shall be free of gratings whenever possible. For gratings located in the surface of any of these areas, grid openings in gratings shall be limited to ½ inch (12.7 mm) in the direction of traffic flow.~~

~~Exceptions:~~

- ~~1. Where the enforcing agency determines that compliance with this section would create an unreasonable hardship, an exception may be granted when equivalent facilitation is provided.~~
- ~~2. This section shall not apply in those conditions where, due to legal or physical constraints, the site of the project will not allow compliance with these building standards or equivalent facilitation without creating an unreasonable hardship. See Section 109.1.5 1.9.1.5.~~

~~1133B.7.3 Five percent gradient. When the slope in the direction of travel of any walk exceeds 1 unit vertical in 20 units horizontal (5-percent slope), it shall comply with the provisions of Section 1133B.5.~~

~~1133B.7.4 Changes in level. Changes in level shall comply with Section 1124B.2.~~

~~1133B.7.5 Level areas. All walks with continuous gradients shall have level areas at least 5 feet (1524 mm) in length at intervals of 400 feet (121 920 mm) maximum.~~

~~1133B.8 Hazards.~~

~~1133B.8.1 Warning curbs. Abrupt changes in level, except between a walk or sidewalk and an adjacent street or driveway, exceeding 4 inches (102 mm) in a vertical dimension, such as at planters or fountains located in or adjacent to walks, sidewalks or other pedestrian ways, shall be identified by curbs projecting at least 6 inches (152 mm) in height above the walk or sidewalk surface to warn the blind of a potential drop-off.~~

~~When a guard or handrail is provided, no curb is required when a guide rail is provided centered 3 inches (76 mm) plus or minus 1 inch (25 mm) above the surface of the walk or sidewalk, the walk is 5 percent or less gradient or no adjacent hazard exists.~~

~~1133B.8.2 Overhanging obstructions. Any obstruction that overhangs a pedestrian's way shall be a minimum of 80 inches (2032 mm) above the walking surface as measured from the bottom of the obstruction. Where a guy support is used parallel to a path of travel, including, but not limited to sidewalks, a guy brace, sidewalk guy or similar device shall be used to prevent an overhanging obstruction as defined (see Figure 11B-28).~~

~~Hazards such as drop-offs adjacent to walk ways or overhanging obstructions can be dangerous to persons with sight problems. This section addresses these situations.~~

~~1133B.8.3 Detectable warnings at transit boarding platforms. See Section 1121B.3.1, Item 8(a).~~

~~1133B.8.4 Detectable directional texture at boarding platforms. See Section 1121B.3.1, Item 8(b).~~

~~1133B.8.5 Detectable warnings at hazardous vehicular areas. If a walk crosses or adjoins a vehicular way, and the walking surfaces are not separated by curbs, railings or other elements between the pedestrian areas and vehicular areas, the boundary between the areas shall be defined by a continuous detectable warning which is 36 inches (914 mm) wide, complying with Section 1121B.3.1 Item 8(a).~~

~~Only approved DSA-AC detectable warning products and directional surfaces shall be installed as provided in the California Code of Regulations (CCR), Title 24, Part 1, Articles 2, 3 and 4. Refer to CCR Title 24, Part 12, Chapter 12-11A and B, for building and facility access specifications for product approval for detectable warning products and directional surfaces.~~

~~Detectable warning products and directional surfaces installed after January 1, 2001, shall be evaluated by an independent entity, selected by the Department of General Services, Division of the State Architect-Access Compliance, for all occupancies, including transportation and other outdoor environments, except that when products and surfaces are for use in residential housing evaluation shall be in consultation with the Department of Housing and Community Development. See Government Code Section 4460.~~

~~1133B.8.6 Protruding objects.~~

~~1133B.8.6.1 General. Objects projecting from walls (for example, telephones) with their leading edges between 27 inches (686 mm) and 80 inches (2032 mm) above the finished floor shall protrude no more than 4 inches (102 mm) into walks, halls, corridors, passageways or aisles. Objects mounted with their leading edges at or below 27 inches (686 mm) above the finished floor may protrude any amount. Free-standing objects mounted on posts or pylons may overhang 12 inches (305 mm)~~

~~maximum from 27 inches (686 mm) to 80 inches (2032 mm) above the ground or finished floor. Protruding objects shall not reduce the clear width of an accessible route or maneuvering space. See Figure 11B-7A.~~

~~1133B.8.6.2 Head room. Walks, halls, corridors, passageways, aisles or other circulation spaces shall have 80 inches (2032 mm) minimum clear head room. If vertical clearance of an area adjoining an accessible route is reduced to less than 80 inches (nominal dimension), a barrier to warn blind or visually impaired persons shall be provided. See Figures 11B-7A and 11B-7C.~~

~~1133B.8.6.3 Free-standing signs. Wherever signs mounted on posts or pylons protrude from the posts or pylons and the bottom edge of the sign is at less than 80 inches (2032 mm) above the finished floor or ground level, the edges of such signs shall be rounded or eased and the corners shall have a minimum radius of 0.125 inches.~~

~~1133B.8.7 Detectable warnings at reflecting pools. The edges of reflecting pools shall be protected by railings, walls, warning curbs or detectable warnings complying with Section 1121B.3.1, Item 8(a).~~

Division IV—ACCESSIBILITY FOR EXISTING BUILDINGS

SECTION 1134B ACCESSIBILITY FOR EXISTING BUILDINGS

~~1134B.1 Scope. The provisions of this division apply to renovation, structural repair, alteration and additions to existing buildings, including those identified as historic buildings. This division identifies minimum standards for removing architectural barriers, and providing and maintaining accessibility to existing buildings and their related facilities.~~

~~———— No renovation, structural repair, alteration or addition shall be undertaken which decreases or has the effect of decreasing accessibility or usability of a building or facility below the requirements for new construction at the time of renovation, structural repair, alteration or addition.~~

~~1134B.2 General. When alterations, structural repairs or additions are made to existing buildings or facilities, they shall comply with all provisions of Division I, New Buildings, except as modified by this division. These requirements shall apply only to the area of specific alteration, structural repair or addition and shall include those areas listed below:~~

~~1134B.2.1 A primary entrance to the building or facility and the primary path of travel to the specific area of alteration, structural repair or addition, and sanitary facilities, drinking fountains, signs and public telephones serving the area.~~

Exceptions:

- ~~1. When the total construction cost of alterations, structural repairs or additions does not exceed a valuation threshold of \$50,000, based on January 1981, "ENR US20 Cities" Average construction cost index of 3372.02 (Engineering News-Record, McGraw-Hill Publishing Company), and the enforcing agency finds that compliance with this code creates an unreasonable hardship, compliance shall be limited to the actual work of the project. The enforcing agency shall annually update the valuation threshold to a current amount based on the increase in the index since the last figure used. (For example, the January 2011 amount is \$132,536.28) For purposes of this exception, an unreasonable hardship exists where the cost of providing an accessible entrance, path of travel, sanitary facilities, public phones and drinking fountains, is disproportionate to the cost of the project; that is, where it exceeds 20 percent of the cost of the project without these features. Where the cost of alterations necessary to make these features fully accessible is disproportionate, access shall be provided to the extent that it can be without incurring disproportionate cost. In choosing which accessible elements to provide, priority should be given to those elements that will provide the greatest access in the following order:~~

- ~~1.1. An accessible entrance,~~

- ~~1.2. An accessible route to the altered area;~~
- ~~1.3. At least one accessible restroom for each sex;~~
- ~~1.4. Accessible telephones;~~
- ~~1.5. Accessible drinking fountains; and~~
- ~~1.6. When possible, additional accessible elements such as parking, storage and alarms.~~

~~The obligation to provide access may not be evaded by performing a series of small alterations to the area served by a single path of travel if those alterations could have been performed as a single undertaking. If an area has been altered without providing an accessible path of travel to that area, and subsequent alterations of that area or a different area on the same path of travel are undertaken within three years of the original alteration, the total cost of alterations to the areas on that path of travel during the preceding three-year period shall be considered in determining whether the cost of making that path of travel accessible is disproportionate. Only alterations undertaken after January 26, 1992, shall be considered in determining if the cost of providing an accessible path of travel is disproportionate to the overall cost of the alterations.~~

- ~~2. Certain types of privately funded, multistory buildings and facilities were formerly exempt from accessibility requirements above and below the first floor under this code, but as of the effective date of this regulation are no longer exempt due to more restrictive provisions in the federal Americans with Disabilities Act. In alteration projects involving buildings and facilities previously approved and built without elevators, areas above and below the ground floor are subject to the 20 percent disproportionality provisions described in Exception 1, above, even if the value of the project exceeds the valuation threshold in Exception 1. The types of buildings and facilities are:~~

- ~~2.1. Office buildings and passenger vehicle service stations of three stories or more and 3,000 or more square feet (279m²) per floor.~~
- ~~2.2. Offices of physicians and surgeons.~~
- ~~2.3. Shopping centers.~~
- ~~2.4. Other buildings and facilities three stories or more and 3,000 or more square feet (279 m²) per floor if a reasonable portion of services sought and used by the public is available on the accessible level.~~

~~For the general privately funded multistory building exception applicable to new construction and alterations, see Section 1103B.1, Exception 2.~~

~~The elevator exception set forth in this section does not obviate or limit in any way the obligation to comply with the other accessibility requirements in this code. For example, floors above or below the accessible ground floor must meet the requirements of this section except for elevator service. If toilet or bathing facilities are provided on a level not served by an elevator, then toilet or bathing facilities must be provided on the accessible ground floor.~~

- ~~3. Alterations, structural repairs or additions consisting of one or more of the following shall be limited to the actual work of the project:~~
- ~~3.1. Altering one building entrance to meet accessibility requirements.~~
- ~~3.2. Altering one existing toilet facility to meet accessibility requirements.~~

- ~~3.3. Altering existing elevators to meet accessibility requirements.~~
- ~~3.4. Altering existing steps to meet accessibility requirements.~~
- ~~3.5. Altering existing handrails to meet accessibility requirements.~~
- ~~3.6. Alteration solely for the purpose of removing barriers barrier removal undertaken pursuant to the requirements of Sections 36.402 and 36.404 through 36.406 of Title III of the Department of Justice regulations promulgated pursuant to the Americans with Disabilities Act (Public Law 101-336, 28 C.F.R., Section 36.304 Section 36.402, 28 C.F.R. Section 36.404, 28 C.F.R. Section 36.405, and 28 C.F.R. 36.406) or the accessibility requirements of this code as those requirements or regulations now exist or are hereafter amended, including the following:~~
- ~~3.6.1. Installing ramps.~~
- ~~3.6.2. Making curb cuts in sidewalks and entrance.~~
- ~~3.6.3. Repositioning shelves.~~
- ~~3.6.4. Rearranging tables, chairs, vending machines, display racks, and other furniture.~~
- ~~3.6.5. Repositioning telephones.~~
- ~~3.6.6. Adding raised markings on elevator control buttons.~~
- ~~3.6.7. Installing flashing alarm lights.~~
- ~~3.6.8. Widening doors.~~
- ~~3.6.9. Installing offset hinges to widen doorways.~~
- ~~3.6.10. Eliminating a turnstile or providing an alternative accessible path.~~
- ~~3.6.11. Installing accessible door hardware.~~
- ~~3.6.12. Installing grab bars in toilet stalls.~~
- ~~3.6.13. Rearranging toilet partitions to increase maneuvering space.~~
- ~~3.6.14. Insulating lavatory pipes under sinks to prevent burns.~~
- ~~3.6.15. Installing a raised toilet seat.~~
- ~~3.6.16. Installing a full-length bathroom mirror.~~
- ~~3.6.17. Repositioning the paper towel dispenser in a bathroom.~~
- ~~3.6.18. Creating designated accessible parking spaces.~~
- ~~3.6.19. Installing an accessible paper cup dispenser at an existing inaccessible water fountain.~~
- ~~3.6.20. Removing high pile, low density carpeting.~~
- ~~3.6.21. Installing vehicle hand controls.~~

~~3.7. Altering existing parking lots by resurfacing and/or restriping.~~

- ~~4. Projects which consist only of heating, ventilation, air conditioning, reroofing, electrical work not involving placement of switches and receptacles, cosmetic work that does not affect items regulated by this code, such as painting, equipment not considered to be a part of the architecture of the building or area, such as computer terminals, office equipment, etc., are not considered alteration projects for the purposes of accessibility for persons with disabilities and shall not be subject to this code unless they affect the usability of the building or facility. For the purposes of this section, the term "construction cost" does not include building permit fees or discretionary permit fees.~~

~~The only purpose of this exception is to exclude projects from activating the provisions of this section. The exceptions are not intended to relieve projects from complying with other applicable provisions of this code (e.g., replacement of carpet does not activate the provisions of this section; however, it still must comply with Section 1124B.3).~~

- ~~5. If an element listed in Section 1134B.2.1, Exception 5, Items 5.1 through 5.5 has been constructed or altered in accordance with the accessibility requirements in either the 2007 or 2010 California Building Code, retrofit of that element to reflect the incremental changes in the August 1, 2012 Emergency Supplement to the 2010 California Building Code shall not be required solely because of an alteration to an area served by the element.~~

~~5.1 Accessible water closet — distance to adjacent wall or partition.~~

~~5.2 Accessible water closet — encroachment of the adjacent fixture at the rear wall into the required clear floor space at the wide side of an accessible water closet.~~

~~5.3 Toilet tissue dispenser — distance in front of water closet.~~

~~5.4 Drinking fountain spout outlet (bubbler outlet) — distance from front edge of the fountain.~~

~~5.5 Drinking fountain spout — angle of water stream.~~

~~1134B.2.2 Where it is technically infeasible in the area of an alteration to make existing toilet facilities code compliant and to install separate toilet facilities for each sex, then the installation of at least one unisex toilet facility per floor being altered, located in the same area as existing toilet facilities, will be permitted. 2. Toilet and bathing facilities serving the area.
3. Drinking fountains serving the area.
4. Public telephones serving the area, and

For example, floors above or below the accessible ground floor must meet the requirements of this section except for elevator service. If toilet or bathing facilities are provided on a level not served by an elevator, then toilet or bathing facilities must be provided on the accessible ground floor.

TOPIC 11C.1

~~CHAPTER 11C~~
~~STANDARDS FOR CARD READERS AT GASOLINE FUEL-DISPENSING FACILITIES~~

~~SECTION 1101C~~
~~CARD-READER DEVICES AT FUEL-DISPENSING EQUIPMENT~~

~~1101C.1 General. Notwithstanding other requirements in the California Building Code (CBC), only the requirements and additional definitions in this section shall apply to card-reading devices in motor vehicle fuel facilities, except that administrative requirements which are found in Chapter 1 – California Administration Division I still apply.~~

~~_____ For purposes of this section, the following definitions shall apply:~~

~~ACCESSIBLE. See Chapter 11A, Section 1107A.1-A and Chapter 11B, Section 1102B.~~

~~ACCESSIBLE ELEMENT. See Chapter 11B, Section 1102B.~~

~~ALTERNATE CARD READER shall be defined in this section as functionally equal card reader and control directly attached to or an integral part of the fuel dispenser in addition to the primary card reader which is an integral part of the dispenser.~~

~~FREE-STANDING PEDESTAL is a card-reading device which controls one or more remote fuel dispensers that have no card reader as an integral part of the fuel dispenser.~~

~~GRADE (Adjacent Ground Elevation). See Chapter 2, Section 202.~~

~~INTERNATIONAL SYMBOL OF ACCESSIBILITY. See Chapter 11A, Section 1107A.9-I and Chapter 11B, Section 1102B.~~

~~LEVEL ACCESSIBLE AREA, for the purposes of this section, shall mean a slope of not more than one unit vertical in 50 units horizontal (2-percent slope) in front of the dispensing device; however, the slope may extend to one unit vertical in 20 units horizontal (5-percent slope) where the enforcing authority determines that, due to unusual site conditions, the 2-percent slope is not obtainable.~~

~~LEVEL AREA. See Chapter 11A, Section 1107A.12-L and Chapter 11B, Section 1102B.~~

~~RECOMMEND. See Chapter 2, Section 202.~~

~~TYPE OF MOTOR FUEL shall mean gasoline, diesel, compressed natural gas, methanol, electricity or ethanol.~~

SECTION 1102C APPLICATION

~~This section shall apply to equipment located at the following facilities:~~

- ~~1. New motor vehicle fuel facilities.~~
- ~~2. Existing motor vehicle fuel facilities built before the effective date of this section when:~~
 - ~~1.1. Remodeling or reconstruction includes removal and replacement of one or more islands and associated piping and tank(s); or~~
 - ~~1.2. Remodeling includes reconstruction or removal and replacement of fuel islands at facilities that provide free-standing pedestal card readers.~~

SECTION 1103C NUMBER OF ACCESSIBLE CARD-READING DEVICES REQUIRED

~~Where only one card-reading device is installed for use with any type of motor fuel, it shall meet the required features of this section. When more than one card-reading location is available for a specific type of motor fuel, a minimum of two for that type shall have the accessible features of this section.~~

SECTION 1104C REQUIRED FEATURES

~~Card-reading devices at motor vehicle fuel facilities shall be accessible by complying with only the following:~~

- ~~1. The highest operable part of each primary or alternate card reader shall be no more than 54 inches (1372 mm) measured from the base of the fuel dispenser. Where card readers are located on free-standing pedestals, the card-reading control function shall be no more than 54 inches (1372 mm) above an accessible level area which is served by an accessible route of travel.~~

~~Exception: If an enforcing agency requires that fuel dispensers or card-reading devices be placed in a manner where the card-reading device exceeds the requirements described herein, the provisions of Section 1104C do not apply. Any enforcing agency having jurisdiction over retail fueling facilities may not require islands or impose other regulations which conflict with this section, unless the agency documents and justifies the specific necessity for such a rule or ordinance and complies with the requirements of Health and Safety Code Section 18941.~~

- ~~2. An accessible route of travel shall be provided to the base of all fuel dispensers required to meet the provisions of this section. Such fuel dispensers shall be mounted on the accessible level area.~~
- ~~3. An accessible level area shall be provided which is minimally 30 inches by 48 inches (762 mm by 1219 mm) level and clear. This area shall be provided within 10 inches (254 mm) in plain view of the face of the controls and shall be unobstructed by any features, except pump nozzles and hoses, with the long side of this space parallel to and centered [plus or minus 9 inches (229 mm)] with the face of the card reader controls. See Figures 11C-1 and 11C-2.~~

Enabling of the alarm verification feature shall be protected by password or limited access.

(2) A smoke detector that is continuously subjected to a smoke concentration above alarm threshold does not delay the system functions of Sections 10.6 through 10.13, 23.8.1.1, or 21.2.1 by more than 30 seconds.

(3) Actuation of an alarm-initiating device other than a smoke detector causes the system functions of 4.4.3, 6.8.1.1, or 6.16.2.1 without additional delay.

(4) The current status of the alarm verification feature is shown on the record of completion (see Figure 4.5.2.1, item 10).
