Dear Mr. Palmer:

This report documents a Phase I environmental site assessment for the RESD State Street property at 345 West Ash Street and 1301 State Street in San Diego, California. If you have any questions about the report or require additional information, please do not hesitate to contact the undersigned at (949) 296-0977 Ext. 111 or at dsiren@avocetenv.com. As always, Avocet Environmental, Inc. appreciates the opportunity to be of service to the California Department of General Services.

Respectfully submitted,

AVOCET ENVIRONMENTAL, INC.

EXECUTIVE SUMMARY

This report documents a Phase I environmental site assessment (ESA) for the property located southeast of the corner of State and Ash Streets in San Diego, California (the "property" or "site"). The site, which occupies a full city block, is utilized primarily as a parking lot and contains two buildings, one at 345 West Ash Street and the other at 1301 State Street. The building at 345 West Ash Street is currently used by the State of California, Department of General Services, Real Estate Services Division (DGS) for storage, while the 1301 State Street building is currently unoccupied. Avocet Environmental, Inc. (Avocet) conducted the Phase I ESA on behalf of DGS, which may lease the property for low-income housing redevelopment. The primary objective of the Phase I ESA is to evaluate the history and current condition of the site in the context of the use, storage, handling, and disposal of potentially hazardous substances that could have adversely impacted the underlying vadose zone and groundwater. The Phase I ESA was conducted in general accordance with the scope and limitations of ASTM International (ASTM) Standard E1527-13. Based on the site's history and current condition, the possible existence of "Recognized Environmental Conditions" (RECs), "Controlled RECs" (CRECs), and "Historical RECs" (HRECs), as defined in ASTM Standard E1527-13 (ASTM, 2013), and "other environmental features" (OEFs) have been evaluated. For Phase I ESA purposes, OEFs are defined as conditions that do not meet the definition of a REC, CREC, or HREC but which Avocet believes warrant mention in a comprehensive Phase I ESA. The site location is shown in Figure 1 and the site and vicinity are shown in Figure 2. A larger-scale plan of the site is presented in Figure 3.

SITE HISTORY AND OPERATIONS

The approximately 1.38-acre site encompasses a city block in downtown San Diego. The block is bound by West Ash Street to the north, Union Street to the east, West A Street to the south, and State Street to the west. The site currently features two buildings associated with the addresses of 345 West Ash Street and 1301 State Street. The building at 345 West Ash Street is an approximately 10,000-square-foot single-story garage located in the northwestern corner of the site and is currently used by DGS as a maintenance storage facility. The building at 1301 State Street is an approximately 14,000-square-foot two-story commercial building in the southwestern corner of the site and is currently vacant. The remainder of the site consists of asphalt-paved parking areas that are divided in the central portion of the block. The western paved parking area between the two buildings has 30 stalls and the eastern paved parking area, which occupies the entire eastern half of the site, has a reported 115 stalls. Vehicular access is controlled by chain link and metal fencing along the perimeters with an automated gate for access/egress from Union Street to the east. An additional, small, paved parking area is present in the southwestern corner of the site.

The site appears to have been developed for residential purposes prior to 1888 and remained as such through the early 1920s. From the late 1920s to the early 1960s, the site usage gradually changed from residential, to mixed residential and commercial, to largely commercial. By the mid-1960s, the site appears to consist primarily of commercial automotive repair businesses and

parking garages/lots. By the late-1960s, the site appears to have attained its current configuration, with the garage and office building in the northwest and southwest corners, respectively, and the balance of the site utilized for parking. Site visits on January 24 and March 4, 2020 revealed that the 1301 State Street office building (i.e., the office building) is presently vacant and unsuitable for occupancy due to extensive water damage, and the 345 West Ash Street garage (i.e., the garage) is being utilized by DGS for storage. Stored materials in the garage include hazardous materials and waste, including multiple quart to 5-gallon-sized containers (and one small drum) of paint and various new and used petroleum products, including engine and hydraulic oil and fuel. There is no visible evidence of releases in the paved hazardous materials storage area and no documented evidence of hazardous substance releases anywhere on the property.

PRINCIPAL FINDINGS

The principal findings of the Phase I ESA for the subject site are outlined below followed by a summary of the identified RECs, CRECs, HRECs, and OEFs, which are depicted on Figure 3.

- The site is located in the coastal subprovince of the Peninsular Ranges Physiographic Province. The Peninsular Ranges consist of a series of elongated northwest-trending mountain ranges and intervening valleys and structural basins. The coastal subprovince consists of a broad plain that trends roughly parallel to the coastline. The coastal plain is characterized by a broad wedge of Tertiary-aged sedimentary deposits that increase in thickness to the west and are capped by Quaternary terrace deposits. The area is seismically active, with several known active faults crossing the province.

- The site is located in the Coastal Plain of the San Diego Basin, a groundwater basin defined by the area underlain by the San Diego Formation. The groundwater quality in the Coastal Plain of San Diego is predominately brackish (i.e., contains moderate to high levels of salinity) due primarily to natural geologic sources and sea water intrusion. It is due to this natural salinity that the basin has previously had no designated beneficial uses. Since 1999, the City of San Diego had been desalinating groundwater from the basin for potable purposes. In the site vicinity, groundwater occurs under unconfined conditions at depths ranging from 46 to 49 feet bgs and flows toward the southwest into San Diego Bay.

- The subject site is not located within the administrative boundaries of any oil field.

- Naturally occurring radon levels in the site vicinity are expected to be low and within regulatory agency criteria.

- The subject site was developed prior to 1888 and has supported mixed residential and commercial/industrial uses, including various automotive sales, storage, and repair businesses and aircraft parts manufacturing.

- The State of California appears to have taken ownership of the property around 1966 and cleared all but the two remaining buildings from the site. The two buildings were used by the State for vehicle maintenance and office space. The remainder of the site is used for parking.

RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2013) defines RECs as:

> *". . . the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

Based on the subject Phase I ESA, Avocet has identified five RECs at the site.

- **REC 1 – Former Aircraft Parts Factory, Automotive Repair, Auto Greasing, Tire Service, and Badge Manufacturing.** Multiple former manufacturing and automotive repair businesses operated at the site from the late 1920s through the late 1960s. These types of businesses commonly use petroleum hydrocarbons and/or solvents in their operations, which have the potential to impact the subsurface if spilled or released either from improper usage or disposal. Therefore, the historical use of the central and southwestern portions of the site for manufacturing and automotive repair is considered a REC for purposes of this Phase I ESA.

- **REC 2 – Former Auto Repair Garage.** The garage at 345 West Ash Street has been present in the northwestern corner of the site since prior to 1928. The building is identified as having been used for auto repair and maintenance since at least 1970 and is presently being used to store a relatively small amount of hazardous materials, including paints, oils, and hydraulic fluid. Although the floors are in good condition with no apparent cracking, the hazardous materials are not being stored with secondary containment. Moreover, the building is equipped with floor drains that could, in the event of an inadvertent release, convey hazardous materials to the storm drain and subsequently to San Diego Bay. The historical use of the 345 West Ash Street garage for automotive repairs and the current storage of hazardous materials without secondary containment are considered a REC for the purposes of this Phase I ESA.

- **REC 3 – In-Ground Hydraulic Lifts.** Two in-ground hydraulic lifts were observed in the east-central portion of the 345 West Ash Street building. The lifts

appeared to be in disrepair and not currently used. The lifts were likely installed for use during automotive repairs. The in-ground lifts use hydraulic fluid that is stored in a remote reservoir and pumped under pressure through a system of pipes into an in-ground cylinder to displace a piston, thereby raising the lift and vehicle. Over time, the reservoirs, pipes, and/or cylinders have the potential to leak hydraulic fluid and can impact the subsurface soil. Therefore, the in-ground hydraulic lifts are considered a REC for the purposes of this Phase I ESA.

- **REC 4 – Possible Remaining USTs.** It was common in the 1960s and 1970s for State maintenance garages to use underground storage tanks (USTs) for vehicle refueling and/or waste oil storage. Although no conclusive evidence has been discovered that USTs have ever been present on the property, an apparent vent pipe fastened to the south wall of the 345 West Ash Street garage near the canopy (Figure 3 and Photograph E-22) is circumstantial evidence of a former or existing UST. Until the purpose of the "vent" pipe is determined, the possibility of remaining USTs is considered a REC for the purposes of this Phase I ESA.

- **REC 5 – Possible Remaining Oil/Water Separator.** It was noted in a 1995 San Diego County Department of Environmental Health (SDCoDEH) site inspection report that an oil/water separator was permitted at the site. In the same inspection report, it was noted that the separator sump was full, had not been pumped out in at least four years, and the State was ordered to clean out the separator. An oil/water separator was not observed at the site during the walkover survey, and it is assumed that if the separator had been removed, a post-closure report would be on file with the SDCoDEH. Since oil/water separators accumulate petroleum hydrocarbons and solids that may contain heavy metals (i.e., potentially hazardous materials), the possible presence of an oil/water separator at the site is considered a REC for the purposes of this Phase I ESA.

CONTROLLED RECS (CRECS)

ASTM (2013) defines CRECs as a REC:

> *". . . resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."*

Based on the subject Phase I ESA, Avocet has not identified any CRECs at the site.

HISTORICAL RECS (HRECS)

ASTM defines HRECs as:

> *". . . a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."*

Based on the subject Phase I ESA, Avocet has not identified any HRECs at the site.

OTHER ENVIRONMENTAL FEATURES (OEFS)

OEFs are environmental features or conditions that do not meet the ASTM definition of a REC, CREC, or HREC but which may warrant mention for visibility purposes in the context of acquiring and redeveloping the site. Based on the subject Phase I ESA, Avocet has identified three OEFs at the site, as summarized below. To minimize possible confusion, the REC and OEF identification numbers are sequential.

- **OEF 6 – POL staining.** Pavement areas are locally stained with petroleum-based fuels, oils, and lubricants (POLs) from parked vehicles. In some areas the pavement is cracked, providing possible access for POLs to the subsurface. However, the POL staining seen across the parking areas of the site is considered *de minimis*, and as such, it is considered an OEF for Phase I ESA purposes.

- **OEF 7 - ACMs and LBPs.** The use of asbestos-containing materials (ACMs) and lead-based paint (LBP) in commercial construction was banned in the late 1970s. Since the site buildings were constructed earlier than the late 1970s, it is possible that ACMs and LBP exist at the site. Although available records indicate that 6 tons of asbestos-containing waste was removed from the site in 2007, no records were located or provided that indicate that the site structures were ever surveyed for ACMs and LBP. Until the site is formally surveyed and the potential for these materials to exist at the site is eliminated, ACMs and LBP are identified as an OEF.

- **OEF 8 – Impacted Fill.** It is common knowledge among local environmental professionals and regulatory agencies that artificial/undocumented fill or burn pit materials can be found in the downtown San Diego area and neighboring communities. These fills are often found to be debris-laden and sometime contain elevated levels of metals, such as lead. Typically, these fills are found while redeveloping a site. While the possible presence of undocumented fill material is not considered a recognized environmental condition, it is a constraint that should be considered when developing budgets for new construction projects. As such, the potential for impacted fill is considered an OEF.

VAPOR INTRUSION/VAPOR ENCROACHMENT

As part of the Phase I ESA, Avocet evaluated the potential presence of vapor intrusion conditions (VICs) and/or vapor encroachment conditions (VECs) at the subject site. A VIC can occur if volatile organic compounds (VOCs) are present in the vadose zone or in groundwater beneath a property at concentrations such that vapor could intrude into, and accumulate in, an overlying structure at concentrations hazardous to human health. Avocet has not reviewed any documentation that indicates VOCs were used in significant quantities at the site in the past, although petroleum hydrocarbons and solvents related to vehicle maintenance were likely to have been used at the site. Due to the past automobile repair conducted in multiple locations since at least 1950, the existence of a VIC cannot be ruled out. A VEC can occur if VOCs from an offsite source migrate beneath a property in the vapor phase. Given the proximity of several facilities at which petroleum hydrocarbon and solvents might have been used for fueling and/or degreasing and/or other purposes, the possibility of a VEC at the site, however unlikely, also cannot be ruled out.

1.0 INTRODUCTION

This report documents a Phase I environmental site assessment (ESA) for the property located southeast of the corner of State and Ash Streets in San Diego, California (the "property" or "site"). The property currently consists primarily of a parking lot but also supports two buildings, one at 345 West Ash Street and the other at 1301 State Street. The building at 345 West Ash Street is currently used by the State of California, Department of General Services, Real Estate Services Division (DGS) for storage, while the 1301 State Street building is currently vacant and extensively water damaged. Avocet Environmental, Inc. (Avocet) conducted the subject Phase I ESA on behalf of DGS, which may lease the property for redevelopment as low-income housing. The primary purpose of the Phase I ESA is to document and evaluate the history and current condition of the site in the context of the use, storage, handling, and disposal of potentially hazardous substances that could have impacted the subsurface environment or that may pose other human health risks. Avocet conducted the Phase I ESA in general accordance with the requirements and limitations of ASTM International (ASTM) Standard E1527-13. The site location is shown in Figure 1, an aerial photograph of the site and vicinity is presented in Figure 2, and a plan of the site is presented in Figure 3.

1.1 OVERVIEW

The approximately 1.38-acre site encompasses a city block in downtown San Diego and is identified as Assessor's Parcel Number 533-411-10-00. The block is bound by West Ash Street to the north, Union Street to the east, West A Street to the south, and State Street to the west. The site currently features two buildings associated with the addresses 345 West Ash Street and 1301 State Street. The building at 345 West Ash Street is an approximately 10,000-square-foot single-story garage located in the northwestern corner of the site and is currently used by DGS as a materials storage facility. The building at 1301 State Street is an approximately 14,000-square-foot two-story commercial building in the southwestern corner of the site and is currently unoccupied. The remainder of the site consists of asphalt-paved parking areas that are divided in the central portion of the block. The western parking area, between the two buildings, has 30 stalls and the eastern parking area, which occupies the entire eastern half of the site, has a reported 115 stalls. Vehicular access to the lots is controlled by chain link and metal fences along the perimeters with an automated gate for access/egress from Union Street to the east. An additional, small, unfenced, paved parking area is present in the southwestern corner of the site.

The site appears to have been developed for residential purposes prior to 1888 and remained as such through the early 1920s. From the late 1920s to the early 1960s, the site usage gradually changed from residential, to mixed residential and commercial, to solely commercial. By the mid-1960s, the site appears to be occupied primarily by commercial automotive repair businesses and parking garages/lots. By the late 1960s, the site appears to have attained its current configuration, with the garage and office building in the northwest and southwest corners with the balance of the site being used for parking.

1.2 PHASE I ESA OBJECTIVES

The overall objective of the Phase I ESA documented herein is to assess the possible presence of potentially hazardous substances in structures at the site and in the subsurface environment beneath the site. Specific objectives of the Phase I ESA are as follows:

- Document the history of the site in the context of the use, storage, handling, or disposal of potentially hazardous substances.
- Review and evaluate available information related to the investigation and remediation of known or suspected subsurface impacts, if any, at or near the site.
- Assess the possible presence of previously unidentified hazardous substances that could be present in the subsurface as a result of their past use, storage, handling, or disposal at or near the site.
- Identify "Recognized Environmental Conditions" (RECs), "Controlled" RECs (CRECs), and Historical RECs (HRECs), as defined in ASTM E1527-13 (ASTM, 2013).
- Identify "other environmental features" (OEFs), defined for Phase I ESA purposes as features or conditions that do not meet the ASTM definition of a REC, CREC, or HREC, but which warrant mention for visibility purposes in the context of divestment or redevelopment of the site.

1.3 APPROACH

The subject Phase I ESA was conducted in general accordance with the scope and limitations of ASTM E1527-13 (ASTM, 2013) and included:

- A review of relevant background information, including the history of the site and adjacent properties, past land use, and regional hydrogeological conditions.
- A review of historical topographic maps, historical aerial photographs, and environmental records pertaining to the site and the surrounding area.
- Walkover surveys of the site and in-person interviews with DGS personnel on January 24 and March 4, 2020.
- A review of potential onsite and offsite sources of contamination that could adversely impact the subsurface environment (including soil, soil vapor, and groundwater) beneath the site, including a search of regulatory agency databases and visual surveys of adjoining and selected nearby properties.

The format of this Phase I ESA report deviates from that suggested by ASTM; however, all of the elements required by ASTM E1527-13 are included or otherwise addressed.

1.4 LIMITATIONS

This Phase I ESA was performed in general accordance with the scope and limitations of current ASTM practice (ASTM, 2013) and the standard of care customary in the environmental consulting industry as of the date of this report. The conclusions in this Phase I ESA report are based on the information available to Avocet from the sources cited; however, Avocet makes no warranty regarding the accuracy or completeness of this information. Moreover, this Phase I ESA specifically excludes any evaluation of geotechnical conditions, the stability of onsite or adjacent slopes or retaining walls, flooding hazards, seismicity, and the possible impact, if any, of electromagnetic fields associated with nearby electrical facilities. Also, this report cannot and does not include any evaluation of undocumented activities at the site or on adjacent or nearby properties. The exclusions noted above should not be interpreted to mean that every other environmental condition or potential environmental condition has been considered in the subject Phase I ESA.

DGS may rely upon the information provided in this Phase I ESA report for a period of 180 days from the date of issue. After 180 days, this Phase I ESA should be updated in accordance with ASTM guidance. Avocet will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond 180 days of its issue date, or from unauthorized use by third parties.

1.5 REPORT ORGANIZATION

Including the introduction, this Phase I ESA report is organized into six sections. Section 2.0 describes the various sources of information utilized in conducting the Phase I ESA. Section 3.0 presents a summary of relevant background and regional information. Section 4.0 documents the history and current condition of the site. Section 5.0 summarizes information gathered from a review of environmental databases maintained by local, state, and federal government agencies and describes adjoining and selected nearby properties. Section 6.0 presents conclusions in terms of identified RECs, CRECs, HRECs, and OEFs. Supporting information is contained in tables, figures, and six appendices, all of which follow the text of this report.

2.0 SOURCES OF INFORMATION

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps; historical aerial photographs; a walkover survey of the site and in-person discussions with DGS personnel; a review of environmental records available at selected local and state regulatory agencies; a review of databases maintained by local, state, and federal government agencies; and review of other records available from commercial and online sources.

2.1 TOPOGRAPHIC MAPS

To evaluate the history of the site and past land uses, Avocet obtained and reviewed copies of historical U.S. Geological Survey (USGS) topographic maps published between 1904 and 2012 from Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut. The maps, which EDR marks up with the approximate site boundary, are included in chronological order in Appendix A.

2.2 AERIAL PHOTOGRAPHS

To further evaluate the site's history, Avocet obtained and reviewed a "Decade Package" of historical aerial photographs from EDR. EDR's Decade Package generally includes at least one aerial photograph from each decade from the 1920s through the present day. For the subject site, EDR provided aerial photographs taken between 1928 and 2016. The photographs, which EDR marks up with the approximate site boundary, are included in chronological order in Appendix B.

2.3 FIRE INSURANCE MAPS

To further evaluate the site's history, Avocet obtained and reviewed a "Certified Sanborn® Map Report" from EDR. For the subject site, EDR provided fire insurance maps prepared between 1887 and 1971. The maps, which EDR marks up with the approximate site boundary, are included in chronological order in Appendix C.

2.4 CITY DIRECTORIES

Telephone and business directories have been published for cities and counties across the United States since the 1700s and often contain potentially useful information on past land uses and the types of business that operated at specific street addresses. EDR extracts information from such directories and consolidates it in its "The EDR-City Directory Abstract," a copy of which is included as Appendix D to this report.

2.5 WALKOVER SURVEYS AND RELATED COMMUNICATIONS

Avocet personnel conducted walkover surveys of the site on January 24 and March 4, 2020. Selected photographs taken during the walkover surveys are included in Appendix E. In-person interviews conducted on January 24, 2020 involved the following knowledgeable persons:

- Mr. John (Jack) Appel, Office Building Manager II, Facilities Management Division – State of California, Department of General Services

- Mr. Moises Aranda, Chief Engineer, Facilities Management Division – State of California, Department of General Services

The information obtained from the persons listed above is referenced, as appropriate, throughout the remainder of this Phase I ESA report.

2.6 GOVERNMENT DATABASES

To document potential sources of contamination at or near the site, EDR conducted a government records search on Avocet's behalf. The search included local, state, and federal records for the site and for other properties within ASTM-standard radii of the site. The records search is summarized in Section 5.0 and Table 1, and a copy of "The EDR Radius Map™ Report with GeoCheck®" is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were "current," i.e., had been updated within 90 days prior to the search date.

In addition to the above, Avocet searched for potentially relevant environmental records pertaining to the site and nearby properties on the GeoTracker and EnviroStor websites maintained by the California Environmental Protection Agency (CalEPA). Relevant information from this review is incorporated or referred to, as appropriate, throughout the remainder of this report.

2.7 INFORMATION FROM LOCAL AND STATE AGENCIES

Selected federal, state, and local regulatory agencies were contacted on October 11, 2019 to determine whether they have environmental records pertaining specifically to 345 West Ash Street and 1301/1385 State Street, the street addresses of the subject site, which could be relevant for Phase I ESA purposes. In particular, Avocet requested records relating to underground storage tanks (USTs), aboveground storage tanks (ASTs), environmental permits, and enforcement orders; reports and correspondence related to site investigation/assessment, soil sampling, monitoring, cleanup/remediation, removal actions, and closures; and any records related to conditions in air, soil, surface water, groundwater, or other environmental media. The agencies contacted and Avocet's interactions with them were as follows:

- Avocet searched the U.S. Environmental Protection Agency (EPA)'s MyProperty online portal for records related to the subject site address; however, no records were available.

- Written requests were faxed to the California Department of Toxic Substances Control offices in Sacramento, San Diego, Chatsworth, and Berkeley, on October 11, 2019. All four offices responded by letter that they have no records responsive to Avocet's request.

- A records request form was emailed to the San Diego County Department of Environmental Health (SDCoDEH) on October 11, 2019. In an email dated October 15, 2019, SDCoDEH responded with records of four site inspections (1995-1998). Relevant documents provided by SDCoDEH are discussed throughout the remainder of the subject report and referenced as appropriate.

- A records request form was emailed to San Diego Regional Water Quality Control Board (SDRWQCB) on October 11, 2019. In an email on October 11, 2019, SDRWQCB indicated that it could find no records for the addresses requested.

- A records request form was emailed to the San Diego County Air Pollution Control District (SDCoAPCD) on October 11, 2019. On October 16, 2019, the SDCoAPCD emailed site history records for a 1999 Permit to Operate a cold solvent degreaser that expired and was not renewed in 2011. There were reportedly no violations associated with the permit. No further information was provided.

- A records request form was mailed to the San Diego Fire Department on October 11, 2019. In a letter dated October 16, 2019, the City of San Diego, Fire-Rescue Department indicated that it had no inspection reports or related documents for the target addresses.

- An online records request form was submitted through the City of San Diego website on October 11, 2019. The online request is intended to facilitate access to public records for multiple city departments. In an email on October 23, 2019, the City of San Diego indicated that it has no records for the addresses requested.

As noted previously, Avocet also searched for potentially relevant environmental records pertaining to the site and nearby properties on the GeoTracker and EnviroStor websites maintained by CalEPA. Relevant information from GeoTracker and EnviroStor is incorporated or referred to, as appropriate, throughout the remainder of this report.

2.8 OIL AND GAS RECORDS

To assess the possible presence of oil and/or natural gas wells at and in the vicinity of the site, Avocet checked information available online from the California Geologic Energy Management Division (CalGEM). The findings of this review are summarized in Section 3.4.

2.9 RADON GAS RECORDS

To assess the possible presence of naturally occurring radon gas in the subsurface, Avocet reviewed data available from EPA and the California Department of Public Health (CDPH), as summarized in "The EDR Radius Map™ Report With GeoCheck,®" (Appendix F). The available radon gas data are summarized in Section 3.5.

3.0 BACKGROUND AND REGIONAL INFORMATION

Background and regional information considered relevant to the subject Phase I ESA includes nearby surface water features, the site's physiographic setting, and regional geologic and hydrogeological conditions.

3.1 PHYSIOGRAPHIC SETTING AND DRAINAGE

The San Diego region consists of a coastal plain area, a central mountain-valley area, and an eastern mountain-valley area. The coastal plain comprises a series of wave-cut benches covered by thin terrace deposits. This terraced surface has been deeply dissected by streams draining westerly toward the Pacific Ocean and has been smoothed and rounded by erosion. The surface of this area ranges from sea level to about 1,200 feet above mean sea level (msl) and extends from the coast inland in a band about 10 miles wide. The central mountain-valley area is characterized by ridges and intermontane basins, which extend from the coastal plain northeastward to the Elsinore fault zone.

On a more local basis, the site is located on the San Diego coastal plain between San Diego Bay to the west, Mission Valley and the San Diego River to the north, Balboa Park to the east, and Chollas Creek to the south. The ground surface in the site vicinity generally slopes to the southwest toward San Diego Bay. The closest surface water body is San Diego Bay which is located approximately 2,200 feet to the west of the site at its closest point.

3.2 REGIONAL GEOLOGY

The downtown area of San Diego is located in the coastal subprovince of the Peninsular Ranges Physiographic Province. The Peninsular Ranges consist of a series of elongated northwest-trending mountain ranges and intervening valleys and structural basins. The coastal subprovince consists of a broad plain that trends roughly parallel to the coastline. The coastal plain is characterized by a broad wedge of Tertiary-aged sedimentary deposits that increase in thickness to the west and are capped by Quaternary terrace deposits. The extensive terrace deposits define broad, relatively flat mesa surfaces. The area is seismically active, with several known active faults crossing the province.

A basement complex of Jurassic and Cretaceous plutonic and metavolcanic rocks underlies the area at approximately 4,000 feet below msl (California Department of Water Resources [CDWR], June 1967). The basement rocks are overlain by Upper Cretaceous, Tertiary, and Quaternary sedimentary formations. The upper Tertiary and Quaternary marine and non-marine sediment of the Bay Point Formation, San Diego Formation, and Poway Group (Poway Conglomerate) are of primary interest with regard to the occurrence and movement of groundwater in the San Diego region.

In the downtown area of San Diego, the Bay Point Formation is generally present beneath artificial fill or at the surface where artificial fill is not present (Kennedy and Tan, 2008). The Bay Point Formation is a Quaternary-aged (late Pleistocene - Sangamon) near-shore marine and

nonmarine, poorly-consolidated sedimentary deposit that is about 100,000-years old. This formation has produced a large and diverse collection of well-preserved marine invertebrate and vertebrate fossils. The Bay Point Formation is widespread and well exposed along the present-day coastline, notably along the northern shore of Mission Bay, along the San Diego waterfront, and throughout the city of Coronado. The Bay Point Formation is composed mostly of marine and non-marine poorly consolidated, fine- and medium-grained, pale-brown, fossiliferous sandstone. In the site area, the Bay Point Formation is reportedly underlain by the San Diego Formation, a middle or late Pliocene, fine- to medium-grained poorly indurated sandstone at a depth of approximately 37 feet (Construction Testing & Engineering, January 19, 2018).

3.3 REGIONAL HYDROGEOLOGY

In a regional sense, the site is located in the Coastal Plain of San Diego groundwater basin, a basin whose importance has only recently been recognized[1] as southern California municipalities have committed to protecting even marginal groundwater resources. The Coastal Plain of San Diego underlies the cities of San Diego, National City, Chula Vista, Imperial Beach, and San Ysidro in southwestern San Diego County. The basin boundary represents the area underlain by the San Diego Formation (CDWR, May 4, 2018). The basin is bound on the west by San Diego Bay and the Pacific Ocean. The basin is bound on the south by the international border with Mexico and on the north by the alluvium of the Mission Valley Basin. The basin is bound on the east by the La Nacion fault, the lateral extents of the San Diego Formation, and the alluvial areas in Otay Valley and Sweetwater Valley.

The groundwater quality in the Coastal Plain of San Diego is predominately brackish (i.e., contains moderate to high levels of salinity) due primarily to natural geologic sources and sea water intrusion. It is due to this natural salinity that the groundwater in the basin was designated by the State to be of non-beneficial use and was afforded only minimal protection with regard to anthropomorphic groundwater quality degradation. However, in 2014, as part of the Sustainable Groundwater Management Act, the City of San Diego committed to protecting all of its groundwater resources and preserving its established water rights, including those in the Coastal Plain of San Diego groundwater basin (City of San Diego, Public Utilities Department, February 21, 2019). The interest in the Coastal Plain groundwater basin was the result of technological improvements over recent decades that have enhanced the treatability of certain water sources, such as brackish groundwater, and reduced the associated costs. Therefore, the water resource contained in the Coastal Plain of San Diego groundwater basin, previously considered non-beneficial, is now viewed by the City as valuable protection against draught and interruptions in imported water supplies. The Richard A. Reynolds Groundwater Desalination Facility in Chula Vista, California (6.3 miles to the southeast of the site) is currently producing

[1] As part of the City of San Diego's Sustainable Groundwater Management Act of 2014, a basin boundary modification was submitted to the California Department of Water Resources in 2016 requesting a modification to the boundaries of the Sweetwater Valley, Otay Valley, and Tijuana Valley groundwater basins. The requested modification was approved in October 2016 and the three basins were consolidated to include the whole of the underlying San Diego Formation aquifer as a "new" groundwater basin, referred to as the "Coastal Plain of San Diego."

10 million gallons of drinking water per day from ten brackish groundwater wells completed in the San Diego Formation (Coastal Plain of San Diego groundwater basin).

In the Coastal Plain of San Diego groundwater basin, groundwater is primarily found under unconfined conditions in the Pliocene San Diego Formation and underlying Eocene Poway Group. The San Diego Formation is principally marine in origin and consists of sandstone, siltstone, and conglomerate, along with some volcanic tuff beds, all of which vary in thickness. Although this formation is considered to be only of low to moderate permeability, water wells penetrate it to depths of more than 1,000 feet. The Poway Group is about 1,000 feet in maximum thickness, principally non-marine in origin, and is composed of gravel, cobbles, and boulders derived largely from volcanic sources. Westward-thickening interbeds of claystone of brackish water origin, reflecting periods of shoreline retreat (transgressive deposits), locally compose up to 20 percent of the sequence.

Groundwater investigations have been conducted at several properties within 1 mile of the subject site. The nearest such property is the County of San Diego Fleet Services facility located approximately 0.02 mile southeast of the subject site, at 1251 Union Street. Groundwater investigations at this facility were initiated following the detection of unauthorized releases from three former gasoline USTs during tank closure in 1998. Although the site was closed with no further action required in 2013, hydrologic information obtained in the interim from the three groundwater monitoring wells indicates that groundwater occurs at depths ranging from 46 to 49 feet below ground surface (bgs) and flows toward the southwest into San Diego Bay.

3.4 OIL AND GAS WELLS

CalGEM records available online indicate that the site is not located within the administrative boundary of an oil or gas field (CalGEM Well Finder, February 27, 2020). CalGEM records indicate that no oil or gas wells appear to have been drilled within the boundaries of the site itself. The nearest well to the site is Balboa Oil Company Well Number 1 (API 0407300047), located approximately 2.8 miles to the north, and the well status is listed as plugged. According to CalGEM records, Well Number 1 was drilled in 1911-1919; however, no oil-bearing zones were discovered during drilling. At this distance, neither this well nor any other is likely to have impacted the subsurface environment beneath the subject site, although it should be noted that the accuracy of reported well locations is not easily verified.

3.5 RADON GAS

EPA recommends avoiding long-term exposure to radon levels greater than 4 picocuries per liter (pCi/L). CDPH maintains a radon database for California sorted by zip code (CDPH, February 2017). In brief, indoor radon measurements were performed throughout the state, and the percentage of buildings with reported radon levels greater than 4 pCi/L within each zip code was reported, along with the number of buildings tested. Of the nine buildings tested for radon within the zip code for the site (92101), only one contained radon at a level above 4 pCi/L. Moreover, the EPA (1993) and the USGS developed a Map of Radon Zones for the United States, organized by county. According to the map, San Diego County is a Radon Zone 3, indicating that radon levels in buildings are expected to be less than 2 pCi/L. EDR's Radius Map

Report (Appendix F) indicates that the average radon activity on the ground floor of residential structures in San Diego County was 0.677 pCi/L, which is well below EPA's recommended maximum exposure level. Based on the above, naturally occurring radon is unlikely to be of concern at the subject site.

4.0 SITE HISTORY AND CONDITION

This section documents the history of the site and describes current site conditions, with emphasis on existing and former environmental features.

4.1 SITE HISTORY

The history of the site and vicinity has been compiled based on information from the sources outlined in Section 2.0, particularly the historical aerial photographs, historical topographic maps, and fire insurance maps. Photographs and maps from the following years were reviewed:

- Topographic maps from 1904, 1930, 1942, 1953 1967, 1975, 1991, 1994, 1996, and 2012 (Appendix A).
- Aerial photographs from 1928, 1949, 1953, 1964, 1970, 1979, 1985, 1989, 1994, 2005, 2009, 2012, and 2016 (Appendix B).
- Fire insurance maps from 1887, 1888, 1906, 1921, 1950, 1956, 1957, 1959, 1962, 1963, 1965, 1970, and 1971 (Appendix C)

Photographs and maps that showed significant changes to the subject site and/or changes to the surrounding land use are referenced, where appropriate, throughout this section.

4.1.1 Initial-Development, <1870 – 1966

The downtown area of San Diego was developed in the late 1860s when the area was promoted as being more convenient to shipping than the old town area, which was several miles from navigable water. Still, San Diego remained a relatively backwater town until the arrival of a railroad connection in 1878. The earliest record reviewed for Phase I ESA purposes was a fire insurance map from 1888 (Appendix C), as the fire insurance map from 1887 provided by EDR only included the southern site boundary and did not show any site features. The site and nearby properties appear to have been initially developed prior to 1888. The map shows present-day streets in their current alignments, with Ash Street to the north, Union Street to the east, A Street to the south, and Columbia Street (future State Street) to the west. The fire insurance map also indicates the site was originally divided into 12 lots, 7 of which include structures labeled “D” to indicate a residential dwelling, one labeled “3 Tenement,” and one in the northeast corner labeled “Shops” on one half and “D” on the other. Two of the lots in the southeast corner of the site appear to have been undeveloped as of 1888. Like the subject site, nearby surrounding properties also appear to have been developed with primarily residential dwellings prior to 1888.

The earliest topographic map reviewed for Phase I ESA purposes was published in 1904 (Appendix A). The map shows San Diego as being gridded and developed more or less along current street alignments. Consistent with the 1888 fire insurance map, the 1904 topographic map shows multiple small probable residential structures occupying most of the site. The 1906 fire insurance map indicates that all of the structures on the property and most of those

surrounding the property are residential, though most of the structures had been enlarged or otherwise modified and the four southernmost lots were consolidated into two larger parcels, one occupying each of the southwest and southeast corners of the site. Likewise, the 1921 fire insurance map indicates an entirely residential land use on the property, though the size and density of the structures is increased and several of the structures are labeled as apartments or multi-family dwellings. The earliest available aerial photograph was taken in 1928 (Appendix B) and indicates the beginning of a progressive change in land use from residential to commercial. The 1928 photograph shows that several of the residential structures in the northern half of the site had been demolished, the two lots in the northwest corner of the site had been consolidated, and the existing garage at 345 West Ash Street had been constructed. Similarly, it appears that relatively large commercial structures were added to the two lots south of the garage and the lot cater-corner to the southeast. The northeast corner and most of the southern portion of the site appear to still be occupied primarily by residential structures.

Similar to the subject site, the 1928 aerial photograph suggests that properties to the north, south, and west were also partially redeveloped with larger commercial structures, leaving some of the residential structures intact. Nearby properties to the east appear mostly unchanged. It is noteworthy that the topographic map from 1930 contradicts the 1928 aerial photograph and shows the site and nearby properties as remaining more or less the same as depicted in the 1921 fire insurance map. However, it is likely that the map was simply republished from an earlier version without revision. Furthermore, the topographic maps published between 1942 and 1996 do not provide additional detailed information for the site, as the city blocks are shaded pink to indicate dense urban development (Appendix A).

The period of relatively rapid initial development in the late 19th century and redevelopment in the early 20th century provided opportunity for the placement and/or accumulation of artificial/undocumented fill on the downtown area properties. Experience has shown that it is not uncommon to find artificial/undocumented fill on properties located in the downtown area of the city of San Diego and surrounding communities. This fill material is sometimes found to be debris-laden and impacted with metals, such as lead. The source of the contaminated material is often “burn pits” that were used by residents for disposal of household waste. These impacted materials are routinely uncovered during redevelopment of urban properties. The potential to find impacted fill and/or burn pits while redeveloping the property is considered an OEF for Phase I ESA purposes.

An aerial photograph from 1949 and a fire insurance map from 1950 show the site developed with a mixture of commercial/industrial and residential structures. The northwestern portion of the site remains developed with a commercial structure, labeled on the Sanborn Map as a store and believed to be the existing garage at 345 West Ash Street. The northeastern portion of the site remains developed with residential structures. The west-central portion of the site is depicted with two interconnected warehouse buildings: the northern building occupied by an “Aircraft Parts Factory” and the southern building labeled as vacant. The east-central portion of the site is shown with a warehouse building in the northern portion and a 21-unit apartment complex labeled as “Rome Apartments” in the southern portion. Two commercial structures labeled “Auto Greasing” and “Tire Service & Repair” are shown in the southwestern corner of

the site, with an open area facing the street corner labeled "Gas & Oil In Yard". The southeastern portion of the site appears to be partially vacant and possibly used for parking. Surrounding properties appear to have been partially redeveloped with automotive-related businesses (battery/ignition service, auto sales and repair, tire retreading, auto upholstery, auto service, auto washing, auto painting, and an auto body shop) and with some residential dwellings remaining in the block to the east of the site.

An aerial photograph from 1953 and fire insurance maps from 1956, 1957, and 1959 show little change to the subject site, with the exception of a new warehouse building replacing the dwelling in the northeastern portion of the site and a used auto sales lot in the southeastern portion of the site. The northeastern warehouse building is labeled "Badge Manufacturing" in the 1959 fire insurance map. The central warehouses are labeled "Auto Top Shop, Auto Seat Covers, and Auto Storage/Auto Body Shop." Nearby properties to the north, south, and west appear like the prior maps/aerial photographs, with the exception of redevelopment noted to the block directly east of the site. This block includes the notation "All Bldg's In This Block Removed" in the 1959 fire insurance map.

Fire insurance maps from 1962, 1963, and 1965 and an aerial photograph from 1964 show the site as mostly similar to the prior maps/photographs, with the exception of the redevelopment of southwestern corner of the site with the existing 1301 State Street warehouse building. This building is labeled "Auto Parts Warehouse." In addition, the central warehouse buildings are labeled "Private Garage-14 cars, Auto Repair, and Auto Storage" in the fire insurance maps. The Rome Apartment building remains in the southeastern portion of the site until 1964, when it was demolished and the lot was left vacant. As of 1965, the only area of residential land use left on the site was the small parcel on the northeast corner. The southeastern corner of the site remained undeveloped and labeled as a parking lot. In the 1965 fire insurance map, the property directly east of the site has been redeveloped with the current multi-story State-owned commercial office building.

As discussed, from the 1940s until about 1966, the central and southwestern portions of the site were used for a variety of industrial processes, including a manufacturer of aircraft parts, and supported several different types of automotive repair/maintenance businesses. Although the precise nature of these industrial and commercial businesses is not known, it is not unusual for these types of operations to use petroleum hydrocarbons and/or solvents. Improper use and/or disposal of petroleum hydrocarbons and/or solvents can result in impacts to the subsurface. As such, the historical use of the property by manufacturers and for automotive repair/maintenance is considered a REC for Phase I ESA purposes.

4.1.2 Current-Development, 1966 – Present

In the 1966 aerial photograph, the site appears in its present-day configuration with only two buildings on the site. The entire eastern half of the site and the central portion of the western half of the site have been cleared of any structures and paved for parking. The remaining buildings include the two current buildings, located at 345 West Ash Street in the northwestern corner and 1301 State Street in the southwestern corner. Nearby properties appear to remain mostly similar

to the previous fire insurance maps and aerial photographs, with automotive-related businesses to the north, south, and west and the State-owned office building to the east.

Fire insurance maps from 1970 and 1971 and aerial photographs from 1970, 1979, 1985, 1989, 1994, 2005, 2009, 2012, and 2016 show the site as similar to present and similar to the prior maps/photographs, with the exceptions of the northwestern building labeled "Garage" and the southwestern structure "Storage" with the balance of the site labeled "Parking." The aerial photographs from 1970 to 2016 show the site as it currently exists, with the two current buildings and parking areas. Reference to permits in County records suggests that a solvent degreaser and oil/water separator were used in garage operations. From 1970 until about 1989, the properties to the north (across West Ash Street) were involved in a variety of commercial, industrial, and residential land uses, including apartments, a warehouse, a machine shop, and various automotive repair businesses. In 1989, the property to the north began to revert back to residential land use with the construction of a 12-story, 76-unit multi-family structure on the northeast corner of West Ash and State Streets. Other large multi-story, multi-family residential structures were added to the block in the 2000s. To the east, across Union Street, the land use has not changed since the early 1960s when the 6-story, State of California office building was constructed. Likewise, to the south of the site, across West A Street, land use has not changed significantly since the late 1950s and is still involved with automotive maintenance, though a number of businesses have been replaced by parking lots and one by a bail bonds provider. Since the 1970s, the properties to the west, which historically have been involved primarily in automotive repair and sales, have been slowly converting to visitor-serving commercial enterprises. Starting in 1994 and occurring intermittently until 2016, all but one of the buildings on the parcel west of State Street were slowly removed and the vacant lots used for parking. In 2017 and 2018, a 14-story, 246-unit hotel and health club was constructed on the parcel immediately west of the site.

4.2 CURRENT SITE CONDITIONS

Avocet conducted walkover surveys of the site on January 24 and March 4, 2020. The January 24, 2020 site visit was accompanied by DGS personnel. Selected photographs taken during the surveys, with DGS's permission, are included in Appendix E and are referenced, as appropriate, below.

4.2.1 Exterior Conditions

The western half of the 1.38-acre property features a one-story storage building (former garage) in the north corner with the address 345 West Ash Street (Photograph E-1), a two-story vacant office building in the south corner with the address 1301 State Street (Photograph E-2), and a central paved parking area. The remaining eastern half of the site is an asphalt-paved parking lot that is only accessible through gates by authorized personnel (Photograph E-3). The site is primarily accessed from the east via Union Street and is subdivided into east and west halves by a chain link fence with a gate which remains open most of the time.

The asphalt pavement in the eastern and western parking areas has experienced localized surface cracking, which appears to have been patched in some areas (Photographs E-4 and E-5). Surface

drainage from the eastern parking lot flows west into a drainage culvert that directs flow west through the western central parking lot to a storm drain located along State Street (Photograph E-6). Other than some *de minimis* surface staining by petroleum-based fuel, oils, and lubricants (POLs) from parked vehicles, there were no other noteworthy environmental features in the parking lot areas. A linear trench crosses the southern and eastern margins of the property from the southwest corner (Photograph E-7) to near the Union Street automated access gate. The trench was reportedly excavated for traffic signal wiring at an unspecified date.

4.2.2 Structure and Interior Conditions

The northwestern garage building (345 West Ash Street) is an approximately 10,000-square-foot single-story slab-on-grade building constructed with cement block and stucco exterior finish with a steel and wood framed roof (Photographs E-1, E-8, E-9, and E-10). Roll-up metal doors are present on the northern and southern sides of the building and provide access to the interior. In the northwestern portion of the building are small wood-frame and drywall free-standing offices with vinyl composition tile flooring (Photographs E-10 and E-11). In addition, a free-standing restroom of wood-frame and drywall construction with vinyl composition tile flooring is present in the southeastern corner of the garage (Photograph E-12). The garage is currently used for the storage of supplies and materials by the DGS maintenance division (Photographs E-9 and E-13). Based on information provided by Messrs. Appel and Aranda, the building was previously used by the State as a maintenance garage for fleet vehicles. No other information was provided to Avocet regarding the past usage of the garage for this Phase I ESA. Avocet observed two in-ground hydraulic vehicle lifts located in the east-central portion of the building (Photographs E-14 and E-15). These lifts appear to have been left in place with the subsurface hydraulic cylinders still present. In addition, Avocet observed several floor drains within and adjacent to the garage (Photographs E-16 and E-17). The use of this building for over 40 years as an automotive repair garage and the remaining hydraulic lifts are considered RECs for the purposes of this Phase I ESA.

It was common in the 1960s and 1970s for State maintenance garages to use USTs for vehicle refueling and/or waste oil storage. Although no conclusive evidence has been discovered that USTs have ever been present on the property, a vent pipe[2] fastened to the south wall of the 345 West Ash Street garage near the canopy (Figure 3 and Photograph E-22) is circumstantial evidence of a former or existing UST. It is also possible that the vent pipe is a remote air intake for a former garage air compressor. Until the purpose of the "vent" pipe is determined, the possibility of remaining USTs is considered a REC for the purposes of this Phase I ESA.

In response to Avocet's records request, SDCoDEH provided copies of four inspection reports for the garage at 345 West Ash Street. The January 25, 1995 inspection report made reference to Industrial User Discharge Permit No. 09-0661 for an oil/water separator. The 1995 report noted four violations, three of which were administrative in nature and the fourth referred to operation

[2] The "apparent vent pipe" could also be a remote air compressor intake. Older reciprocating air compressors were frequently equipped with remote air intakes as a means of reducing the noise level inside the building.

of the oil/water separator. Since the purpose of oil/water separators is to remove hazardous substances such as petroleum hydrocarbons and heavy metals from waste water, they must be maintained to operate effectively. Maintenance requires monitoring and periodic cleanouts to remove accumulated oil and sediment, testing to profile the waste for disposal, and management of the waste pursuant to RCRA standards. The fourth violation in the 1995 inspection report stated that the oil/water separator sump was full and noted that the sump had reportedly not been pumped out in more than four years. The violation included an order that the separator sump be cleaned out within ten days and that evidence of the work be submitted to the County. No records were provided by the County to indicate that the work was ever completed, but subsequent inspections in 1996, 1997, and 1998 made no mention of an oil/water separator. An oil/water separator was not observed at the site during the walkover survey and it is assumed that if the separator had been removed, a post-closure report would be on file with either the City or County of San Diego. Since oil/water separators accumulate petroleum hydrocarbons and solids that may contain heavy metals (i.e., potentially hazardous materials), the possible presence of an oil/water separator at the site is considered a REC for the purposes of this Phase I ESA.

In the other SDCoDEH garage inspection reports, several other violations were noted but all except one were administrative in nature and not indicative of an actual or potential release of a hazardous substance. In the February 26, 1998 report, SDCoDEH noted a spill of used oil on a concrete surface beneath a used oil storage container. It is noteworthy that in the state of California, used oil is considered a hazardous waste. The violation included an order that the spill be immediately cleaned up, that any recovered material be managed as a hazardous waste, and that the facility be operated in a manner to prevent spills. Since the waste oil was spilled on a concrete surface and (presumably) properly cleaned up, it is considered a *de minimis* condition for the purposes of this Phase I ESA.

In response to Avocet's records request, SDCoAPCD provided information indicating that the State had applied in 1997 for a Permit to Operate a cold solvent degreaser at the site. This permit was approved in 1999 and remained active until 2011, when it expired and was not renewed. Cold solvent degreasers (i.e., parts washers) are common fixtures in automotive repair facilities, and it is assumed that parts washers were used in the garage for many years prior to 1997. Since there were no violations associated with the permit, and historical use of the site for automotive repair assumes the use of petroleum hydrocarbons and solvents, the use of a cold solvent degreaser is not considered a separate REC for Phase I purposes.

The southwestern former warehouse and office building (1301 State Street) is an approximately 14,000-square-foot two-story slab-on-grade structure with wood framing and stucco exterior finish (Photographs E-2 and E-18). The interior of the building is subdivided into interior offices, meeting rooms, and storage rooms by wood framing and drywall. Areas of vinyl floor tile, sheet vinyl flooring, and carpeting were observed throughout, and select areas of the building also had decorative wall and ceiling tiles. The building is currently unoccupied and appears to have been last used many years ago (greater than five) as a commercial office building. The building is in poor condition and appears to be uninhabitable due to partially collapsed ceilings/roof and extensive interior water intrusion damage (Photographs E-19 and E-20). The water intrusion has resulted in structural integrity concerns, including partially

collapsed flooring, walls, and ceilings throughout. In addition to corroded/water damaged building materials, extensive mold growth was observed on many walls and ceilings of the building (Photograph E-21). Except for the mold growth and the potential for asbestos and lead-based paint in and on the site structure, no environmental concerns were observed within the southwestern site building.

4.3 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

Avocent was not provided and has been unable to locate any documentation indicating previous environmental work conducted at the site.

5.0 ADJOINING AND NEARBY PROPERTIES

This section summarizes a search by EDR of environmental databases maintained by local, state, and federal government agencies and also describes properties adjoining the subject site and selected nearby properties. The descriptions of adjoining and selected nearby properties are based on Avocet's observations from public rights-of-way, information included in the EDR report (Appendix F), and information available from the GeoTracker and EnviroStor websites maintained by CalEPA.

5.1 DATABASE LISTINGS

EDR's search encompassed over 90 databases maintained by local, state, and federal government agencies, including all of the databases specified in Section 8.2.1 of ASTM E1527-13. The "target property" was defined for records search purposes by its addresses at 345 West Ash Street and 1301 State Street, San Diego, California 92101. EDR's Radius Map Report with GeoCheck®, which is included as Appendix G, identifies numerous database listings for properties within ASTM-recommended search radii. These listings are summarized in Table 1, but in the interest of brevity and making relevant information more accessible, the following summaries focus on those database listings considered potentially relevant to the objectives of the subject Phase I ESA, specifically those pertaining to the subject site and to nearby properties with documented hazardous substance releases with the potential to have impacted the site. Other properties/database listings not considered indicative of a hazardous substance release, database listings for hydraulically downgradient or crossgradient properties, and database listings with "Closed – Case Completed" status have generally been screened out. It is noted in this regard that inclusion in certain of the databases searched is not, in and of itself, an indication that hazardous substances have been released or that the subsurface beneath the properties is contaminated. For example, inclusion in the HAZNET or the other databases that pertain to hazardous waste generation indicates that the generator is following proper disposal procedures. Similarly, the fact that USTs or ASTs are or were operated at a property and were registered with the state is not, in and of itself, of concern unless the tanks(s) had leaked, in which case the property should be included in other databases.

5.2 TARGET PROPERTY LISTINGS

The target property address of 1301 State Street is listed in the RCRA NONGEN/NLR database under the California Department of Justice. The database listing pertains to the following:

- RCRA NONGEN/NLR: The site was a generator of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA) but has been a non-generator since December of 1983. During its years as a waste generator, the site had no reported violations.

The inferred target property address of 317 West Ash Street is listed in the HAZNET database under Topoli, LLC. The database listing pertains to the following:

- HAZNET: Listed for the regulated disposal of 6 tons of asbestos-containing waste at an offsite landfill in 2007.

The inferred target property address of 1341 State Street is listed in the EDR Hist Auto database under Johnson, M.E. Automobile Repairing. The database listing pertains to the following:

- EDR Hist Auto: Listed as an auto repair facility in 1930.

These listings for the target property do not indicate that hazardous substances have been released or that the subsurface beneath the property is contaminated. However, as noted above, the site has a long history as a vehicle maintenance garage(s) with no prior environmental assessment completed. As such, the historical use of the site for vehicle maintenance is considered a REC for Phase I ESA purposes.

5.3 ADJOINING AND NEARBY PROPERTIES TO THE NORTH

To the north of the site, across West Ash Street, are two multi-family residential buildings, a mid-rise (12-story) structure with 76 units (350 West Ash Street) to the northwest and a low-rise (4-story) structure with 24 units (320 West Ash Street) to the northeast.

5.3.1 Aperture/Former Ford Auto Care/Firestone, 1454 Union Street

The property at 1454 Union Street is located 0.041 mile north of the site, immediately north of the low-rise residential building across West Ash Street from the site (Figure 2). The address, which is currently occupied by a pastry shop, is listed in the San Diego Co. SAM and CPS-SLIC databases under Aperture/Former Ford Auto Care and the EDR HIST Auto database under Easton, P.H., and on the San Diego Co. HMMD and SWEEPS databases under Firestone. The listing on the San Diego Co. HMMD and CPS-SLIC database is for a soils-only release case relating to redevelopment activities and the excavation and offsite disposal of petroleum- and lead-impacted soil. The regulatory cases were closed in December of 2006. This facility was also listed on the EDR Hist Auto database for automotive repair listings from 1927 to 2000. This facility was also listed on the San Diego Co. HMMD database relating to regulated use of hazardous materials and generation of hazardous wastes and included several inspections of the facility. Several violations were issued during inspections, but all appeared to be administrative in nature and not indicative of a release. The facility was also listed on the SWEEPS UST database for a 1,000-gallon waste-oil UST, which was formerly at this facility. Although this address is located a short distance hydraulically upgradient of the site, given that the cases were granted closure or not indicative of a significant groundwater impact, it is unlikely that this former business impacted the subsurface of the subject site.

5.3.2 Continental Cleaners & Laundry, 1470 State Street

The property at 1470 State Street is located 0.052 mile to the north of the site on a parcel currently occupied by the 18-story, 382-unit Acqua Vista Condos (Figure 2). The address is listed in the EDR HIST Cleaner, ENVIROSTOR, CPS-SLIC, San Diego Co. HMMD, and San Diego Co. SAM databases as Continental Cleaners & Laundry and on the EDR HIST Auto

database as Ginther, O.D. This facility is also mapped on CalEPA's EnviroStor website. This facility appears to have been an automobile repair facility from 1930 to 1961 and a dry cleaner from at least 1969 to 1988. The former facility was investigated under regulatory agency oversight, with multiple rounds of soil, soil gas, and groundwater investigations. Petroleum hydrocarbon and solvent contamination were detected in soil and groundwater. The facility was subsequently redeveloped for residential use with a subterranean parking garage. The impacted soil was removed during redevelopment; however, groundwater, which contained up to 1,400 micrograms per liter (µg/L) of tetrachloroethene (PCE), a common dry cleaning solvent, was not addressed in the remedial action. Even with the elevated PCE groundwater concentrations, case closure was granted on August 28, 2000, which was perhaps justified at the time given that the local groundwater has no beneficial designation. Given today's focus on vapor intrusion, the very low PCE screening levels, and the knowledge that PCE dissolved in groundwater can create a vapor intrusion condition, it is less likely that the case would be given closure without additional investigation and/or groundwater remediation. Given the reported southwest direction of groundwater flow, the former dry cleaner is located crossgradient of the site. Assuming that this direction of groundwater flow is accurate, it is unlikely that the PCE groundwater contamination has significantly impacted the subsurface of the subject site.

5.4 ADJOINING PROPERTIES TO THE EAST

To the east of the site, across Union Street, is a State of California-owned mid-rise commercial building with a Front Street address.

5.4.1 San Diego State Building/State of California, 1350 Front Street

The property at 1350 Front Street is located 0.043 mile to the east of the Site (Figure 2). The address is listed in the RCRA NONGEN/NLR under the San Diego State Building and on the HIST UST, San Diego Co. HMMD, SWEEPS UST, HAZNET and CERS databases under the State of California. This property is listed on the RCRA NONGEN/NLR database as a facility that previously generated hazardous waste. This listing appears to be from February 1991 and no violations are reported. This property is also listed on the HIST UST database for a 2,000-gallon diesel UST that was installed in 1962 and last used in 1978. Based on information in the listing for the San Diego Co. HMMD database, the UST was reportedly removed from the facility in June 1990 under regulatory oversight. The facility is also listed on the HAZNET database for the regulated offsite disposal of multiple types of hazardous wastes. Finally, the facility is listed on the CERS database for the regulation of chemical storage facilities. A compliance evaluation was last conducted in October 2017 with no violations reported. Although the property is located a short distance hydraulically upgradient of the site, there are no documented releases from this facility that could significantly impact the subsurface of the subject site.

5.5 ADJOINING AND NEARBY PROPERTIES TO THE SOUTH

To the south of the site, across West A Street, are two automotive repair facilities: an operating garage, A Street Auto Service at 1263 State Street; and a closed County of San Diego service and refueling garage at 1251 Union Street (Figure 2). Both automotive repair facilities are surrounded by commercial enterprises and/or paved parking lots.

5.5.1 Precision Tune, A Street Auto Service, and England, W.H., 1263 State Street

This property, currently operating as A Street Auto Service, is listed on the RCRA-SQG, San Diego Co. HMMD, CERS Haz Waste, CERS, RCRA NONGEN/NLR and EDR Hist Auto databases. The 1996 RCRA-SQG listing was for Precision Tune, a small-quantity generator of hazardous waste with no reported violations. The HMMD listings were for A Street Auto Service for an active and several inactive hazardous substance generator permits. Several administrative violations were issued, but none of the violations were indicative of a release. The property is also listed as A Street Auto Service on the CERS Haz Waste and CERS databases for the regulated generation and offsite disposal of hazardous wastes associated with the automotive repair business. The facility was also listed as A Street Auto Service on the RCRA NONGEN/NLR database as a non-generator of hazardous waste as of 2007 with no violations. Finally, the facility is listed on the EDR Hist Auto database as a gasoline station in 1943 and as an automotive repair shop from 1980 to 2012. Since the property is considered hydraulically downgradient or crossgradient, and assuming that the limited available information is accurate and no significant releases have occurred at this facility, it is unlikely that operations at 1263 State Street have impacted the subsurface beneath the subject site.

5.5.2 Central Filling Station, County of San Diego, Foss, W.J., Union & A Service Station, and SD County Fleet Service, 1251 Union Street

This property is located approximately 0.045 mile to the southeast of the site, across the intersection of Union Street and West A Street. The property is listed on the HIST UST database as Central Filling Station; on the San Diego Co. HMMD, SWEEPS UST, San Diego Co. SAM, LUST, HIST CORTESE, HIST UST, UST, and RCRA-SQG databases as the County of San Diego; and on the EDR HIST Auto database as Foss, W.J. The property is also listed on the HIST UST and HAZNET databases as Union & A Service Station and on the UST, RCRA-SQG, FINDS, and ECHO databases as San Diego County Fleet Service. The property is listed on the HIST UST database for three former USTs, including two 6,000-gallon gasoline USTs and one 500-gallon waste oil UST, owned and operated by the County of San Diego. The property is also listed for multiple types of regulated use and disposal of hazardous materials and waste associated with an automotive repair garage. UST removal and replacement was reportedly conducted in 1998, at which time contaminated soil from a release was observed. Under regulatory agency oversight, the subsurface of the property (soil and groundwater) was evaluated and case closure granted in June 2013. Information collected as part of the site investigation indicated that groundwater occurs beneath the site at depths ranging from 46 to 49 feet with flow toward the southwest at a very low gradient. Given the crossgradient location of this former fueling facility to the site and assuming that the documented fuel and waste oil releases were limited to soil only, it is unlikely that operations at 1251 Union Street property have impacted subsurface environmental conditions beneath the subject site.

5.6 ADJOINING PROPERTIES TO THE WEST

To the west of the site, across State Street, is a new 14-story high-rise hotel with subterranean parking at the address of 401 West Ash Street (Figure 2).

5.6.1 Carté Hotel and Suites, 401 West Ash Street

The property, located west of the site at 401 West Ash Street, is listed in the CPS-SLIC, CERS TANKS, CIWQS, and CERS databases. According to the limited information provided by EDR and the CPS-SLIC case, corroborated via the GeoTracker website, during redevelopment in 2017 and 2018, an approximately 10- to 15-foot-thick layer of petroleum- and lead-impacted soil was excavated from the property and disposed of at an offsite landfill. The total volume of special waste soil excavated and disposed of offsite was 10,602 cubic yards. The contaminated soil was reportedly from the former (c. 1950 to 1971) use of this property as an auto body/paint/auto washing shop. Below the impacted soil was clean/inert soil that was also excavated to accommodate the two levels of subterranean parking. This property was granted case closure on February 14, 2018. This property was also listed on the CERS TANKS database for the regulated use of an AST, on the CIWQS database for regulated water quality reporting for hotel processes, and on the CERS database for the regulated storage of chemicals associated with hotel operations. The property is considered hydraulically crossgradient, and assuming that the limited available information is accurate, the undocumented historical releases found in the fill soil beneath this property are unlikely to have impacted subsurface environmental conditions beneath the subject site.

A pre-construction (November 2016) groundwater grab sample collected from a depth of about 50 feet bgs and analyzed for petroleum hydrocarbons, volatile organic compounds (VOCs), and semivolatile organic compounds did not contain a detectable concentration of any analyte (Construction Testing and Engineering, January 19, 2018). This is notable because the Carté Hotel is located partially downgradient of the subject site and the absence of contamination in the groundwater sample suggests that no significant groundwater contamination is emanating from the subject site.

5.7 POTENTIAL OFFSITE SOURCES

After reviewing the information provided in EDR's Radius Map Report (Appendix F) and additional information available from CalEPA's GeoTracker and EnviroStor websites, none of the offsite properties are considered potentially relevant for Phase I ESA purposes.

6.0 SUMMARY AND CONCLUSIONS

This section presents the conclusions of the Phase I ESA for the subject site in terms of identified and sequentially numbered RECs and OEFs, the locations of which are shown in Figure 3.

6.1 RECOGNIZED ENVIRONMENTAL CONDITIONS (RECS)

ASTM (2013) defines RECs as:

> *". . . the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

Based on the subject Phase I ESA, Avocet has identified five RECs at the site.

- **REC 1 – Former Aircraft Parts Factory, Automotive Repair, Auto Greasing, Tire Service, and Badge Manufacturing.** Multiple former manufacturing and automotive repair businesses operated at the site from the late 1920s through the late 1960s. These types of businesses commonly use petroleum hydrocarbons and/or solvents in their operations, which have the potential to impact the subsurface if spilled or released either from improper usage or disposal. Therefore, the historical use of the central and southwestern portions of the site for manufacturing and automotive repair is considered a REC for the purposes of this Phase I ESA.

- **REC 2 – Former Auto Repair Garage.** The garage at 345 West Ash Street has been present in the northwestern corner of the site since prior to 1928. The building is identified as having been used for auto repair and maintenance since at least 1970 and is presently being used to store a relatively small amount of hazardous materials, including paints, oils, and hydraulic fluid. Although the floors are in good condition with no apparent cracking, the hazardous materials are not being stored with secondary containment. Moreover, the building is equipped with floor drains that could, in the event of an inadvertent release, allow hazardous materials to enter the storm drain that drains to San Diego Bay. The historical use of the 345 West Ash Street garage for automotive repairs and the current storage of hazardous materials without secondary containment are considered a REC for the purposes of this Phase I ESA.

- **REC 3 – In-Ground Hydraulic Lifts.** Two in-ground hydraulic lifts were observed in the east-central portion of the 345 West Ash Street building. The lifts appeared to be in disrepair and not currently used. The lifts were likely installed for use during automotive repairs. The in-ground lifts use hydraulic fluid that is stored in a remote reservoir and pumped under pressure through a system of pipes

into an in-ground cylinder to displace a piston, thereby raising the lift and vehicle. Over time, the reservoirs, pipes, and/or cylinders have the potential to leak and can impact the subsurface soil. Therefore, the in-ground hydraulic lifts are considered a REC for the purposes of this Phase I ESA.

- **REC 4 – Possible Remaining USTs.** It was common in the 1960s and 1970s for State maintenance garages to use USTs for vehicle refueling and/or waste oil storage. Although no conclusive evidence has been discovered that USTs have ever been present on the property, an apparent vent pipe fastened to the south wall of the 345 West Ash Street garage near the canopy (Figure 3 and Photograph E-22) is circumstantial evidence of a former or existing UST. Until the purpose of the "vent" pipe is determined, the possibility of remaining USTs is considered a REC for the purposes of this Phase I ESA.

REC 5 – Possible Remaining Oil/Water Separator. A 1995 SDCoDEH site inspection report noted that an oil/water separator was permitted at the site. In the same inspection report, it was noted that the separator sump was full, had not been pumped out in at least four years, and the State was ordered to clean out the separator. An oil/water separator was not observed at the site during the walkover survey and it is assumed that if the separator had been removed, a post-closure report would be on file with either the City or the County. Since oil/water separators accumulate petroleum hydrocarbons and solids that may contain heavy metals (i.e., potentially hazardous materials), the possible presence of an oil/water separator at the site is considered a REC for the purposes of this Phase I ESA.

6.2 CONTROLLED RECS (CRECS)

ASTM (2013) defines CRECs as a REC:

> *". . . resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."*

Based on the subject Phase I ESA, Avocet has not identified any CRECs at the site.

6.3 HISTORICAL RECS (HRECS)

ASTM defines HRECs as:

> *". . . a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any*

required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

Based on the subject Phase I ESA, Avocet has not identified any HRECs at the site.

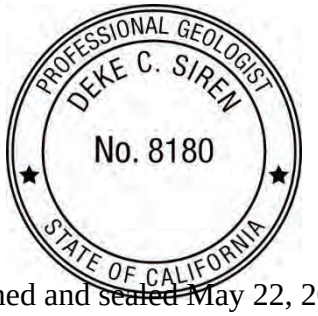
6.4 OTHER ENVIRONMENTAL FEATURES (OEFS)

OEFs are environmental features or conditions that do not meet the ASTM definition of a REC, CREC, or HREC but which may warrant mention for visibility purposes in the context of acquiring and redeveloping the site. Based on the subject Phase I ESA, Avocet has identified three OEFs at the site, as summarized below. To minimize possible confusion, the REC and OEF identification numbers are sequential.

- **OEF 6 – POL staining.** Pavement areas are locally stained with POLs from vehicles. In some areas, the pavement is cracked, providing possible access for POLs to the subsurface. However, the POL staining is considered a *de minimis* condition, and as such, it is considered an OEF for Phase I ESA purposes.

- **OEF 7 – ACMs and LBPs.** The use of asbestos-containing materials (ACMs) and lead-based paint (LBP) in commercial construction was banned in the late 1970s. Since the site buildings were constructed earlier than the late 1970s, it is possible that ACMs and LBP exist at the site. Although available records indicate that 6 tons of asbestos-containing waste was removed from the site in 2007, no records were located or provided that indicate that the site structures were ever surveyed for ACMs and LBP. Until the site is formally surveyed and the potential for these materials to exist at the site is eliminated, ACMs and LBP are identified as an OEF.

- **OEF 8 – Impacted Fill.** It is common knowledge among local environmental professionals and regulatory agencies that artificial/undocumented fill or burn pit materials can be found in the downtown San Diego area and neighboring communities. These fills are often found to be debris-laden and sometimes contain elevated levels of metals, such as lead. Typically, these fills are found while redeveloping a site. While fill material is not considered a recognized environmental condition, it is a constraint that should be considered when developing budgets for new construction projects. As such, the potential for impacted fill is considered an OEF.



6.5 VAPOR INTRUSION/VAPOR ENCROACHMENT

As part of the Phase I ESA, Avocet evaluated the potential presence of vapor intrusion conditions (VICs) and/or vapor encroachment conditions (VECs) at the subject site. A VIC can occur if VOCs are present in the vadose zone or in groundwater beneath a property at concentrations such that vapor could intrude into, and accumulate in, an overlying structure at concentrations hazardous to human health. Avocet has not reviewed any documentation that indicates VOCs were used in significant quantities at the site in the past, although petroleum

hydrocarbons and solvents related to vehicle maintenance were likely to have been used at the site. Due to the past automobile repair conducted in multiple locations since at least 1950, the existence of a VIC cannot be ruled out. A VEC can occur if VOCs from an offsite source migrate beneath a property in the vapor phase. Given the proximity of several facilities at which petroleum hydrocarbon and solvents might have been used for fueling and/or degreasing and/or other purposes, the possibility of a VEC at the site, however unlikely, also cannot be ruled out.

Respectfully submitted,

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Avocet Environmental, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

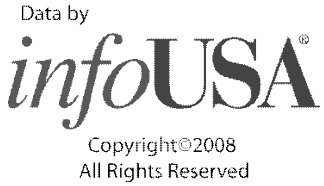
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Site Photographs

AVOCET
ENVIRONMENTAL, INC.

E-1. Looking south at the northwest corner of the site (corner of Ash Street and State Street) with the 345 West Ash Street garage visible. This building is currently being used by DGS for storage.

E-2. Looking east at the southwest corner of the site (corner of State Street and West A Street) with the 1301 State Street building visible. This building is currently vacant.

E-3. Looking north at the eastern paved parking lot.

E-4. Looking west at POLs-stained asphalt in the west-central parking lot.

E-5. Looking south at a large patch in the asphalt pavement in the west-central parking lot. Such patches are sometimes indicative of former underground storage tanks. 1301 State Street building in background.

E-6. Looking northwest at the concrete drainage swale in the west-central parking lot south of the 345 West Ash Street garage.

E-7. Looking east at the parking area south of 1301 State Street; West A Street visible in upper right background. The linear feature is reportedly a trench excavated for traffic signal wiring.

E-8. Looking north from the southwest corner of the west-central parking lot at the south side of the 345 West Ash Street garage.

E-9. Looking west at the interior of the 345 West Ash Street garage.

E-10. Looking north at the interior of the 345 West Ash Street garage. Northwest office area shown in left mid-ground of photograph.

E-11. Flooring in the northwest office area of the 345 West Ash Street garage.

E-12. View of restroom in the southeast corner of the 345 West Ash Street garage.

E-13. View of the hazardous materials storage area located near the center of west wall of the 345 West Ash Street garage.

E-14. One of two in-ground hydraulic lifts in the east-central area of the 345 West Ash Street garage. The aboveground portion of the lift has been removed but the in-ground cylinder and hydraulic lines appear to still be in place.

E-15. View of the second in-ground hydraulic lift in the east-central area of the 345 West Ash Street garage.

E-16. One of several floor drains inside the 345 West Ash Street garage.

E-17. An exterior drain located under the canopy, adjacent to the south wall of the 345 West Ash Street garage.

E-18. View of loose and flakey paint on the north side of the 1301 State Street office building. Given the building's age, the paint may be lead-based.

E-19. View inside the 1301 State Street office building. This building has been extensively damaged by water leaking though the roof and exhibits widespread mold.

E-20. View inside the 1301 State Street office building. Note the heavy vault-style door on what appears to have been a former file storage room.

E-21. View of mold and partially collapsed ceiling in the 1301 State Street office building.

E-22. Looking northwest at the garage door and canopy on the south side of the 345 West Ash Street garage. The pipe on the wall between the door and the canopy is likely a remote air compressor intake but also looks like a UST vent pipe.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/19/2019 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/19/2019 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3

RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 17 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/29/2019 has revealed that there are 40 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 65 CA LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CA SAN DIEGO CO. SAM: The listing contains all underground tank release cases and projects pertaining to properties contaminated with hazardous substances that are actively under review by the Site Assessment and Mitigation Program.

A review of the CA SAN DIEGO CO. SAM list, as provided by EDR, and dated 03/23/2010 has revealed that there are 70 CA SAN DIEGO CO. SAM sites within approximately 0.5 miles of the target property.

Case Number: H04650-001
Facility Status: Closed Case

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 60 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 13 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 14 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 39 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the CA Cortese list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 CA Cortese site within approximately 0.5 miles of the target property.

SDA SECURITY SYSTEMS	***2054 STATE ST***	***NNW 1/4 - 1/2 (0.474 mi.)***	***BJ341***	***968***
Cleanup Status: OPEN - SITE ASSESSMENT				

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there is 1 CA HAZNET site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 62 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 21 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Name:	CARTE HOTEL AND SUITES
Address:	401 WEST ASH STREET
City,State,Zip:	SAN DIEGO, CA 92101
Region:	STATE
Facility Status:	**Completed - Case Closed**
Status Date:	02/14/2018
Global Id:	T10000010324
Lead Agency:	SAN DIEGO COUNTY LOP
Lead Agency Case Number:	DEH2017-LSAM-000435
Latitude:	32.71957
Longitude:	-117.16678
Case Type:	Cleanup Program Site
Case Worker:	JC
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Not reported
Site History:	The Site is located at the southwest corner of West Ash Street and State Street in downtown San Diego, California with the assessor parcel numbers (APNs) of 533-402-0700, 533-402-0800, and 533-402-0900. The Site is being developed as a hotel complex with a two level below ground parking structure and fourteen above grade stories. At the time of the start of current construction the Site operated as a fee based asphalt paved vehicle parking lot. The property was utilized for auto body/auto paint/auto washing shops from at least the years 1950 to 1971. A Notice of Intent (NOI) was submitted to the Regional Water Quality Control Board (RWQCB) along with an Erosion Control Plan dated April 28th, 2017. In response, RWQCB Region 9 (Board) issued a letter dated May 12, 2017 indicating the project could go forward, and the Board did not intend on issuing waste discharge requirements (WDRs) for the offsite reuse of inert soil wastes from the Carte Hotel project. Subsequently an Inert Waste Characterization including Notice of Termination (NOT) was submitted to the RWQCB. The first stage of excavation was to extend past impacted fill areas and transport this soil to a landfill as special waste. This stage started on the north end of the Site where it reached depths of approximately 15 feet. The depth of excavation for special waste soil export gradually decreased to 10 feet at the southern boundary of the Site. This generally followed the shallowing pattern of the native/fill contact zone as translated to the south. Due to large equipment and construction considerations, excavation for special waste disposal extended well into the inert, non-impacted soil. The second stage of excavation included excavation of underlying inert soil waste that continued to the subgrade elevation necessary for the project. It is calculated that approximately total of 32,300 cubic yards of soil was exported from the Site as necessary to construct the below ground structure. The exported soils were segregated as special waste soil for disposal at a regulated landfill and Tier 1 inert soil for random placement in the San Diego region. Special waste fill soil was accepted for placement at the Otay Landfill. The volume of special waste exported to the Otay Landfill

CARTE HOTEL AND SUITES (Continued) **S120762607**

was 10,602 cubic yards as indicated from the manifests with the assumption that each manifest represents 18 cubic yards of soil. A total of 22,696 cubic yards of Tier 1 inert soil was exported from the Site to multiple locations in the San Diego region. Excavated soils have been characterized in accordance with the approved Soil Management Plan. Post construction samples indicate that non-impacted soil underlies the Site. Consequently, it can be concluded that the Site can be developed as proposed with no further environmental remediation activities. It was recommended that VAP Case DEH2017-LSAM-000435 be closed by DEH. DEH concurs with closure of VAP Case DEH2017-LSAM-000435.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: The Site is located at 1251 Union Street, San Diego, California. The Site consists of a service station and repair shop operated by the County of San Diego for County Vehicles. One building is located onsite containing the office and vehicle mai ntenance facility. A fueling station is situated north of the building. County Vehicle parking areas are located north, south and east of the facility building. The Site is located on the southeast corner of Union & A Streets in Downtown San Diego. Three USTs, associated piping and fuel dispensers have been removed from the Site. Two USTs were removed from the western portion of the Site and one UST was removed from the eastern portion of the Site in September, 1998. The Site was restored with one new UST, fuel dispenser and associated piping in the western portion of the Site to supply gasoline for County vehicles. The Site is currently open and fully operational. Land use is not expected to change in the foreseeable future. Preliminary soil sampling was conducted at the Site on September 3, 1998 in an attempt to assess subsurface soil conditions at the Site prior to UST exposure activities. Preliminary sampling consisted of the collection of seven so il samples at locations north of the dispenser island (adjacent to east UST remote fill) and beneath the fuel dispensers. Pot-holing was conducted utilizing a trackhoe, and samples were obtained from the trackhoe bucket. Soil samples were collected in laboratory supplied glass containers and delivered, under chain-of-custody to a mobile laboratory on site for analysis. Preliminary soil samples were analyzed for total petroleum hydrocarbons (TPH) gasoline and diesel range using EPA Method 8015. On September 8, 1998 two 6,000-gallon gasoline USTs and one 300-gallon waste oil UST were removed form the Site. The location of these former USTs are noted on Figure 2. The

COUNTY OF SAN DIEGO (Continued) **S103472132**

gasoline USTs consisted of single-walled steel and supplied unleaded gasoline for County Vehicles. The waste oil UST consisted of single-walled steel and was utilized to store waste oil generated from the County maintenance facility. The gasoline USTs maintained associated piping connecting the tanks to adjacent fuel dispensers, vent lines and remote fill ports. The waste oil UST maintained associated piping connecting the tank to a vent line and a remote fill port, which was located directly above the tank and emptied into the tank by gravity feed. Bums & McDonnell of San Diego, California in accordance with SD-DEH guidelines, accomplished the UST, associated piping and fuel dispenser removals for the County of San Diego. San Diego County and the City of San Diego Fire Department conducted oversight for the UST removal process. Bums & McDonnell prepared a UST closure report for the Site, dated November 6, 1998. Soil samples were collected on September 8, 1998, after the removal of the USTs, under the direct supervision of the County inspector. Soil samples were collected from the bucket of the trackhoe and placed in laboratory-supplied glass containers. Four soil samples were collected from the floor of the gasoline UST excavation within native soil at depths of 16 feet bgs. Soil samples were collected from beneath the east and west ends of the former tank locations (Figure 2). Two soil samples were obtained from the floor of the waste oil UST excavation within native soil at depths of 10 feet bgs (Figure 2). Soil samples were collected from beneath the north and south ends of the former tank location. Two soil samples were obtained from approximately 3 feet bgs at two locations beneath the former dispenser piping. Soil samples collected from beneath the gasoline USTs and dispenser piping were analyzed for total petroleum hydrocarbons (TPH) by California Department of Health Services (DOHS) Method. The sample indicating the highest TPH result was additionally analyzed for methyl-tertiary-butyl ether (MtBE) using EPA Method 8260, benzene, toluene, ethylbenzene and xylenes (BTEX) using EPA Method 8020 and total lead using EPA Method 3050/60 I 0. Soil samples collected from beneath the waste oil UST excavation were analyzed for total recoverable petroleum hydrocarbons (TRPH) by EPA 418.1. The sample indicating the highest TPH result was additionally analyzed for volatile organic compounds (VOCs) using EPA Method 8260, metals using EPA Method 3050/6010, polychlorinated biphenols (PCBs) using EPA Method 8080 and organic lead using EPA Method DHS17420. Approximately 225 cubic yards of soil backfill material were excavated and removed from the gasoline UST excavation. The former backfill material consisted of poorly graded fine sand. Petroleum hydrocarbon-impacted soil was observed during the gasoline UST excavation. On September 8, 1998 seven soil samples were collected from various locations within the stockpile to characterize the soil for disposal. The soil samples were obtained as per the SAM requirements. On September 16, 1998 approximately 225 cubic yards of petroleum hydrocarbonimpacted soil excavated from the former gasoline UST excavation were removed from the Site and transported to Candelaria Environmental Company Biotreatment Facility in Anza, California for disposal. Soil was transported under non-hazardous materials hauling manifests. On September 8 and 10, 1998 six samples were obtained from the base and side walls of the waste oil excavation. Samples were collected in attempt to assess the extent of petroleum hydrocarbon-impacted soil. Samples were analyzed for TRPH. The sample indicating the highest TRPH result was additionally analyzed for VOCs and metals. On September 16, 1998, at the request

COUNTY OF SAN DIEGO (Continued) **S103472132**

of the County of San Diego, ten soil samples were obtained from the base and side walls of the gasoline UST excavation. Samples were collected in an attempt to assess the extent of petroleum hydrocarbon-impacted soil. concentration of 25 mg/kg and an arsenic concentration of 1.5 mg/kg. On October 13, 14 and 15, 2004, Gradient was on site to observe the drilling of three (3) soil borings. The field investigation was conducted at the Site in the area of the existing USTs and associated fuel dispensers. Each soil boring was advanced by hollow stem auger, which was steam cleaned prior to use and between boreholes. All san1pling equipment was decontaminated between sample locations by washing with a laboratory grade detergent, rinsed with potable water and then final rinsed with distilled water. The three (3) soil borings were converted to groundwater monitoring wells designated as MW - I, M W-2 and MW-3. The boring and well locations are shown on Figures 3. Each monitoring well was constructed of 4-inch diameter schedule 40 PVC pIpe. All three monitoring wells were drilled to a depth ranging between 58 and 60 feet bgs. Monitoring well MW-I was completed with 38 feet of blank casing over 20 feet of 0.020-inch screened casing. Monitoring well MW-2 was completed with 40 feet of blank casing over 20 feet of 0.020-inch screened casing. Monitoring well MW-3 was completed with 39 feet of blank casing over 21 feet of 0.020-inch screened casing. The annular space surrounding the monitoring wells were filled with No.3 quartz sand to a point approximately 2 feet above the screened interval. Following the placement of the sand pack and prior to placing in the hydrated bentonite seal, the well was surged with a surge block for approximately 15 minutes, or until the sand pack had settled. More sand was then added to 2 feet above the screened interval prior to completion of the well. A hydrated bentonite seal was placed from 3 feet below grade to the top of sand (approximately 2 above the screened interval). The well assemblage was completed with a flush grade, traffic resistant, water-tight well box cemented into place at grade, and was secured with a locking, water-tight well cap. It should be noted that according to the SD-DEH workplan approval letter dated June 8, 2004 threeadditional soil borings were to be drilled to a depth of 10 feet below non-detectable petroleum hydrocarbon impacted soil for possible laboratory analysis. Based upon no visual or olfactory evidence of contamination in the three (3) monitoring wells installed to date the additional soil borings were not drilled during the field investigation. The prevIous UST removal and investigation indicate the pavement at the site is underlain by loose sand to a depth of approximately 2.0 feet bgs. This sand is likely imported fill material. The sand is underlain by brown silty clay to a depth of approximately 16 feet bgs. The silty clay is lUlderiain by brown si lt with trace clay. The brown silt was the deepest lithologic unit encOlUltered and extended to 19.5 feet bgs. The entire UST system, i.e., tank and product line, are within the brown silty clay. According to the field investigation performed in October 2004, the soil at the Site consists of fill from growld surface to approximately 10 feet bgs underlain by quaternary baypoint fornlation to the total depth of drilling achieved (approximately 60 feet bgs). The Site is located within the Linbergh Hydrologic Subarea of the Pueblo San Diego Hydrologic Unit. There are no beneficial or potential beneficial uses for groundwater listed in the Basin Plan for the Linbergh Hydrologic Subarea. The closest surface water to the Site is San Diego Bay, located approximately 2,500 feet to the west. Surface drainage at the Site is west to Union Street and to the south

COUNTY OF SAN DIEGO (Continued) **S103472132**

offsite. The depth to groundwater in the wells on October 22, 2004 ranged from 46.81 to 49.06 feet bgs. Groundwater elevation measurements are presented in Table 1. A groundwater elevation contour map for the October 22, 2004 sampling event is presented as Figure 4. As indicated on Figure 4, the groundwater is interpreted to flow in a southwesterly direction. The calculated hydraulic gradient is 0.0009 foot-per-foot (flJft.) .

SD CNTY FLEET SERVICE (Continued) **1000335133**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002691613

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

RB Case Number:	Not reported
Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	DEH2014-LSAM-000250
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Total Petroleum Hydrocarbons (TPH)
Site History:	During excavation work initiated for Site redevelopment, an underground storage tank (UST) was discovered. On June 6, 2014, one 200-gallon steel UST was removed. Soil samples were collected and analyzed under the direction of the County of San Diego, Department

COURT HOUSE EXPANSION (LOP) (Continued) **S116741858**

of Environmental Health (DEH). Based on the laboratory results of the soil samples, DEH opened a Local Oversight Program case DEH2014-LSAM-000250 on June 24, 2014. On June 13, 2014 and July 9, 2014, approximately 230 cubic yards of petroleum hydrocarbon impacted soil was excavated and disposed at the Copper Mountain Landfill in Arizona. The depth of the excavation was 33 feet below ground surface with lateral dimensions of 39 feet by 37 feet. Nine confirmation soil samples were collected and analyzed (two from each sidewall at varying depths and one at the bottom). The following shows the highest concentrations from the confirmation soil samples in mg/kg: TPHg <150 TPHd = 2.5 TPHmo = 4.4 Benzene <0.002 Toluene <0.002 Ethylbenzene <0.002 Total Xylenes <0.0039 Napthalene <0.005 Because the Site will be excavated to a total depth of 50 feet below ground surface, the residual TPH concentrations will likely be removed. Groundwater was not encountered during remedial excavation activities. Groundwater is estimated to be between 45 and 50 feet below ground surface. The consultant stated that the contaminant source has been removed and this UST site does not pose a risk to human health or the environment. DEH concurs with the consultants statement. Note: There are other environmental issues at this Site that are not related to the UST release. These issues will be managed under DEHs Voluntary Assistance Program case DEH2014-LSAM-000252.

. Waste code: D018
. Waste name: BENZENE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

SEMPRA ENERGY CENTER CORPORATE CENTER (Continued) **1000110790**

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U151
. Waste name: MERCURY

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 2810

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 100

Waste code: D003

SEMPRA ENERGY CENTER CORPORATE CENTER (Continued) **1000110790**

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 10

Waste code: D018
Waste name: BENZENE
Amount (Lbs): 800

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 800

Environmental Interest/Information System

AAMCO TRANSMISSIONS (Continued) **1000178108**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
