Trichloroethene	5 / 40	6.9 - 89	4.1
Trichlorofluoromethane	2 / 40	ND	5.8 – 7.6

As indicated in Table 5 and excluding 2-butanone (methyl ethyl ketone), acetone, ethanol, and isopropanol, all of which are common laboratory artifacts, PCE and benzene were the most prevalent VOCs detected at concentrations above their respective SFBRWQCB residential and commercial/industrial ESLs. Trichloroethene (TCE), possibly a degradation byproduct of PCE, and chloroform were also detected at concentrations above applicable SFBRWQCB ESLs in samples from two and four vapor probes, respectively. Other frequently detected VOCs include

carbon disulfide (a solvent), dichlorodifluoromethane (a refrigerant), and toluene, ethylbenzene, and total xylenes (motor fuel constituents), though none of these analytes was detected at a concentration above the applicable residential or industrial screening levels. The distributions of PCE, TCE, benzene, and chloroform in soil vapor are illustrated in Figure 4, with exceedances of SFBRWQCB residential and commercial/industrial ESLs highlighted. Based on the distribution and concentrations of the various VOCs, it appears that the presence of these compounds is the result of a number of small, unrelated releases of solvents and/or motor fuel in disparate areas of the site. Figures 5 and 6 present isoconcentration contours for PCE in soil vapor at depths of 5 and 15 feet bgs, respectively. These figures indicate that the lateral extent of PCE in soil vapor has been roughly defined to the 100 µg/m^3 level in localized areas to the southeast (5 feet) and south (15 feet) of the vehicle maintenance garage.

3.3.1 Field Measurements

Field measurements for oxygen (Table 5) were collected from each probe following soil gas sample collection using a Landtec GEM5000 portable gas monitor. Oxygen concentrations ranged from 16.0 to 20.1 percent, indicating aerobic conditions in shallow soils beneath the site.

3.3.2 Vapor Intrusion Assessment

To assess the potential significance of the VOCs in soil vapor in the context of workers and/or future residents at the site, Avocet applied "default" attenuation factors to the highest concentration of each detected VOC in soil vapor, regardless of location, and compared the resulting hypothetical indoor air VOC concentrations to the corresponding SFBRWQCB ESLs, DTSC-SLs, and EPA RSLs. California recently adopted the very conservative EPA default attenuation factor of 0.03 (EPA, June 2015), which Avocet understands is based, in large part, on vapor intrusion into residences with basements in a few areas of the country. Prior to California adopting the EPA default attenuation factor of 0.03, the DTSC default attenuation factors for existing and new commercial buildings were 0.001 and 0.0005, respectively (DTSC, October 2011). Furthermore, the DTSC default attenuation factors for new and existing residential buildings were 0.001 and 0.002, respectively. Using default attenuation factors of 0.03, 0.001[6], 0.002, and 0.0005, Avocet calculated hypothetical VOC concentrations in indoor air. The hypothetical VOC concentrations in indoor air are presented in Table 6, along with relevant screening criteria for commercial/industrial and residential indoor air. The findings of the preliminary vapor intrusion assessment are as follows:

- Applying the DTSC default attenuation factor of 0.0005 for future commercial buildings and the more conservative DTSC default attenuation factor of 0.001 for existing commercial buildings and new residential buildings, to the highest VOC concentrations reported in soil vapor, the hypothetical indoor air concentrations were lower, often by orders of magnitude, than the corresponding commercial/industrial and residential screening levels.

[6] It should be noted that the DTSC default attenuation factors for existing commercial buildings and new residential buildings are identical (0.001).

- Applying the most conservative DTSC default attenuation factor of 0.002 for existing residential buildings to the highest VOC concentrations reported in soil vapor, the hypothetical indoor air concentrations marginally exceeded the residential SFRWQCB ESL and DTSC-SL for benzene.

- The hypothetical benzene concentration in indoor air based on the EPA attenuation factor of 0.03 for existing buildings exceeds the applicable commercial/industrial and residential SFBRWQCB ESL, DTSC-SL, and EPA RSL.

- The hypothetical chloroform and TCE concentrations in indoor air based on the EPA attenuation factor of 0.03 for existing buildings exceed the applicable residential SFRWQCB ESLs and EPA RSLs.

- Applying the very conservative EPA attenuation factor of 0.03 to the highest reported PCE concentration in soil vapor results in hypothetical indoor air concentrations that exceed the residential SFBRWQCB ESL and DTSC-SL; however, the concentrations are below the applicable residential EPA RSL.

- In addition, the hypothetical indoor air concentration of 1,3,5-trimethylbenzene based on the EPA attenuation factor of 0.03 for existing buildings exceeds the applicable residential EPA RSL.

4.0 SUMMARY AND CONCLUSIONS

Subsurface environmental conditions at the State Street Property have been investigated via the analysis of soil matrix and soil vapor samples from 1 biased and 17 unbiased borings completed with nested soil vapor probes at 5 and 15 feet bgs, and soil matrix samples from 2 biased borings to 15 feet bgs. The biased borings targeted the two in-ground hydraulic lifts and the oil/water separator, with soil samples analyzed for a combination of TPH, PCBs, and Title 22 metals. Soil samples collected from the unbiased borings were analyzed for a combination of VOCs, TPH, and Title 22 metals. Soil vapor samples were analyzed by a laboratory for VOCs and in the field for oxygen.

4.1 PHASE II FINDINGS SUMMARY

The findings of the Phase II investigation are summarized below in terms of vadose zone soil types and the presence or absence of the various contaminants in soil and soil vapor.

- The State Street Property is underlain by a variable thickness of artificial fill, which, in turn, is underlain by the Bay Point Formation, a Quaternary-aged (late Pleistocene - Sangamon) near-shore marine and nonmarine, poorly consolidated sedimentary deposit that is about 100,000-years old. The Bay Point Formation is composed mostly of marine and non-marine, poorly consolidated, fine- and medium-grained, pale brown, fossiliferous sandstone with subordinate silty and clayey interlayers. Groundwater was not encountered in any of the onsite borings but reportedly occurs at depths ranging from 46 to 49 feet bgs and flows toward the southwest into San Diego Bay.

- Soil beneath the site contains traces of TPH and VOCs at concentrations well below residential screening levels. PCBs were not detected in any of the soil matrix samples analyzed.

- Metals in the soil matrix samples, for the most part, were measured at concentrations within the range of values characterized as naturally occurring and at concentrations below the most conservative residential screening levels. Lead and zinc were detected in a minority of the samples, at concentrations that may be indicative of anthropomorphic contributions. Although lead and zinc may be characterized as contaminants, the detected concentrations are less than the most conservative residential screening levels.

- Soil vapor beneath the site contains detectable concentrations of several VOCs, including benzene, chloroform, TCE, and PCE. The PCE isoconcentration contours in Figures 5 and 6 appear to be centered south-southeast of the vehicle maintenance garage. The lateral extent of PCE in soil vapor above 100 $\mu g/m^3$ has been roughly defined.

- A preliminary and conservative vapor intrusion assessment based on applying default attenuation factors to the maximum VOC concentrations indicates that the hypothetical concentrations of 1,3,5-trimethylbenzene, benzene, chloroform, PCE, and TCE in indoor air could exceed screening levels.

4.2 RECs AND OEFs

Based on the findings of the Phase II site investigation documented herein, Avocet has revisited and, in some cases, recategorized the RECs at the site identified in Avocet's Phase I ESA:

- **REC 1 - Former Aircraft Parts Factory, Automotive Repair, Auto Greasing, Tire Service, and Badge Manufacturing.** Multiple former manufacturing and automotive repair businesses operated at the site from the late 1920s through the late 1960s. Soil sampling completed across the site found trace concentrations of TPH and a few VOCs, though the reported detections were below soil screening levels, and the detected VOCs are more likely laboratory artifacts than remnants of historical site operations. However, several VOCs consistent with the site's history were detected in the soil vapor samples. The notable VOCs were benzene and PCE, which were detected in the majority of the samples. Preliminary and conservative vapor intrusion assessment using default attenuation factors to the maximum VOC concentrations indicates that the hypothetical concentrations of these VOCs, as well as several others, could exceed screening levels in indoor air. While the reported soil vapor concentrations may be associated with the former auto repair garage (REC 2), it is not possible to differentiate between the various possible sources, and as such, the site commercial/industrial history remains a REC for the site.

- **REC 2 - Former Auto Repair Garage.** The garage at 345 West Ash Street has been present in the northwest corner of the site since prior to 1928. The building is identified as having been used for auto repair and maintenance since at least 1970 and was used by the State as such for an unknown period of time. As discussed above as part of REC 1, though soil TPH and VOC concentrations were *de minimis*, benzene and PCE concentrations in soil vapor are potentially significant. Vapor intrusion assessment employing conservative attenuation factors indicates that the hypothetical concentrations of these VOCs, as well as several others, could exceed screening levels in indoor air. As such, the former auto repair garage remains a REC for the site.

- **REC 3 - In-Ground Hydraulic Lifts.** Two in-ground hydraulic lifts were observed in the east-central portion of the 345 West Ash Street building. The lifts appeared to be in disrepair and not currently used. Borings SB-1 and SB-2 were completed to 15 feet bgs near each lift, with samples analyzed for TPH, VOCs, metals, and PCBs. A trace concentration of TPH was detected in the 13-foot sample collected from Boring SB-1, but the reported concentration was just above the laboratory RL. The only VOC detected was acetone, which is a common laboratory artifact, and PCBs were not detected. Metals were detected in the soil matrix

samples, but, with the exception of lead, which is more likely related to historical site uses (REC 1) than the hydraulic lifts, the concentrations were within the range of background values and below risk-based screening levels. Based on these results, it does not appear that the hydraulic lifts have impacted the subsurface; however, until the lifts are removed, they will remain a REC at the site.

- **REC 4 - Possible Remaining USTs.** It was common in the 1960s and 1970s for State maintenance garages to have onsite USTs for vehicle refueling and/or waste oil storage. To determine whether the site had, or has, a UST, Avocet retained a geophysical contractor to conduct a survey of likely UST locations in areas bordering the maintenance garage on the south and east. The survey revealed no geophysical anomaly indicating the presence or former presence of a UST. Given the geophysical survey results, REC 4 is now recharacterized as an OEF.

- **REC 5 - Possible Remaining Oil/Water Separator**. A 1995 site inspection report by the County of San Diego, Department of Environmental Health, noted that an oil/water separator was permitted at the site. In the same inspection report, it was noted that the separator sump was full, had not been pumped out in at least four years, and the State was ordered to clean out the separator. An oil/water separator was not observed at the site during the walkover survey completed for the Phase I ESA and it was assumed that if the separator had been removed, a post-closure report would be on file with either the City or the County. While onsite for the geophysical survey, Avocet located the separator under the awning on the south side of the garage. Boring SG-18 was drilled and sampled to a depth of 15 feet bgs and completed with soil vapor probes installed at depths of 5 and 15 feet. Trace concentrations of very high molecular weight TPH; a very low concentration of acetone, a common laboratory artifact; and metals concentrations typical of background levels were detected in soil matrix samples collected from the boring. Similar to other soil vapor samples from the site, the samples from SG-18 contained potentially significant concentrations of benzene and PCE. Given the similarity of the concentrations to those in other site samples, the presence of these VOCs is not considered an indication of a point-source release from the oil/water separator. Based on these results, it does not appear that the oil/water separator has impacted the subsurface; however, until the feature is removed, it will remain a REC at the site.

- **OEF 8 – Impacted Fill**. It is common knowledge among local environmental professionals and regulatory agencies that artificial/undocumented fill or burn pit materials can be found in the downtown San Diego area and neighboring communities. These fills are often found to be debris-laden and sometimes contain elevated levels of metals, such as lead. Typically, these fills are found while redeveloping a site. As part of the Phase II investigation, Avocet analyzed 11 shallow (1 foot bgs) soil matrix samples for Title 22 metals. For the most part, the results indicate metals concentrations that are within the background range of

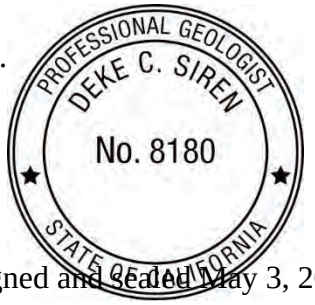
values for California soils, but the concentrations of lead and zinc in 7 of the 11 soil samples are slightly elevated and may reflect the presence of disseminated burn pit materials. Although the lead and zinc concentrations do not exceed the most conservative, residential screening levels, the presence of these metals at the site is considered an OEF.

In summary, the results of this investigation indicate that the principal concern for the site involves the presence of certain VOCs in soil vapor and the potential for a VIC. Because the potential VIC is based on compounding conservative assumptions, as required by regulatory guidance, the actual risk of vapor intrusion into existing and/or future structures at the site is likely relatively low. Evaluation of the actual risk would require the collection and analysis of indoor air samples.

Based on the above, Avocet offers the following recommendations in the context of RESD divesting or repurposing the State Street Property.

- Prospective buyers should be provided the results of the subject investigation so they can evaluate whether vapor mitigation measures are appropriate for future buildings at the site. It is beyond Avocet's scope to make recommendations regarding whether any such mitigation measures are required, but based on the lateral and vertical distribution of VOCs in soil vapor and the conservatism of the preliminary vapor intrusion assessment, Avocet considers the potential for vapor intrusion to be low.

- RESD may wish to consider indoor air sampling in the existing vehicle maintenance garage and warehouse and office building, though use of the garage for vehicle maintenance and chemical storage may complicate interpretation of the results. RESD may also wish to consider engaging a regulatory agency, such as DTSC or the County of San Diego, Department of Environmental Health and Quality, which serves as the Certified Unified Program Agency (CUPA) for the county, to oversee any indoor air sampling and/or redevelopment of the State Street Property.



Notwithstanding the above, Avocet recommends that soil disturbed during future demolition or redevelopment grading work at the site be carefully screened and suspected impacts, if any, evaluated to determine appropriate handling and disposal methods and whether additional investigation may be warranted.

Respectfully submitted,

AVOCET ENVIRONMENTAL, INC.

Notes:
Samples analyzed using EPA Method 8015B
Units are milligrams per kilogram (mg/kg)
bgs = below ground surface
< Denotes nondetected at the Reporting Limit (RL) indicated
Bold type indicates reported at detectable concentration
TPH = total petroleum hydrocarbons
ESLs = Environmental Screening Levels after San Francisco Bay Regional Water Quality Control Board (SFBRWQCB), July 2019

Notes:
Samples analyzed using EPA Method 8260B
Units are micrograms per kilogram (µg/kg) except for equipment and trip blank water samples, which are micrograms per liter (µg/L)
bgs = below ground surface
< Denotes nondetected at the Reporting Limit (RL) indicated
Bold type indicates reported at detectable concentration
- - Denotes not available
VOCs = volatile organic compounds
*1 indicates Laboratory Control Spike (LCS)/Laboraty Control Spike Duplicate (LCSD) Relative Perdent Difference (RPD) exceeds control limits.
*+ indicates LCS and/or LCSD is outside acceptance limits, high biased.
DTSC-SLs = DTSC-modified Screening Levels after HERO HHRA Note Number 3, June 2020
ESLs = Environmental Screening Levels after San Francisco Bay Regional Water Quality Control Board (SFBRWQCB), July 2019
RSLs = Regional Screening Levels after EPA, November 2021

Notes:
Samples analyzed using EPA Method 8260B
Units are micrograms per kilogram (µg/kg) except for equipment and trip blank water samples, which are micrograms per liter (µg/L)
bgs = below ground surface
< Denotes nondetected at the Reporting Limit (RL) indicated
Bold type indicates reported at detectable concentration
- - Denotes not available
VOCs = volatile organic compounds
*1 indicates Laboratory Control Spike (LCS)/Laboraty Control Spike Duplicate (LCSD) Relative Perdent Difference (RPD) exceeds control limits.
*+ indicates LCS and/or LCSD is outside acceptance limits, high biased.
DTSC-SLs = DTSC-modified Screening Levels after HERO HHRA Note Number 3, June 2020
ESLs = Environmental Screening Levels after San Francisco Bay Regional Water Quality Control Board (SFBRWQCB), July 2019
RSLs = Regional Screening Levels after EPA, November 2021

Notes:
Units are micrograms per cubic meter (µg/m^3)
bgs = below ground surface
< Denotes nondetected at the Reporting Limit (RL) indicated
Bold type indicates reported at detectable concentration
- - Denotes not available
VOCs = volatile organic compounds
VOC results are from EPA Method TO-15
Oxygen results are from field measurements collected after the VOC samples were collected
1,1-Difluoroethane was the Leak Detection Compound
* = Result is qualifed as estimated by the reporter based on EPA guidance (EPA, June 2018). Refer to Section 3.3.1
ESLs = Environmental Screening Levels after San Francisco Bay Regional Water Quality Control Board (SFBRWQCB), July 2019

Notes:
bgs = below ground surface
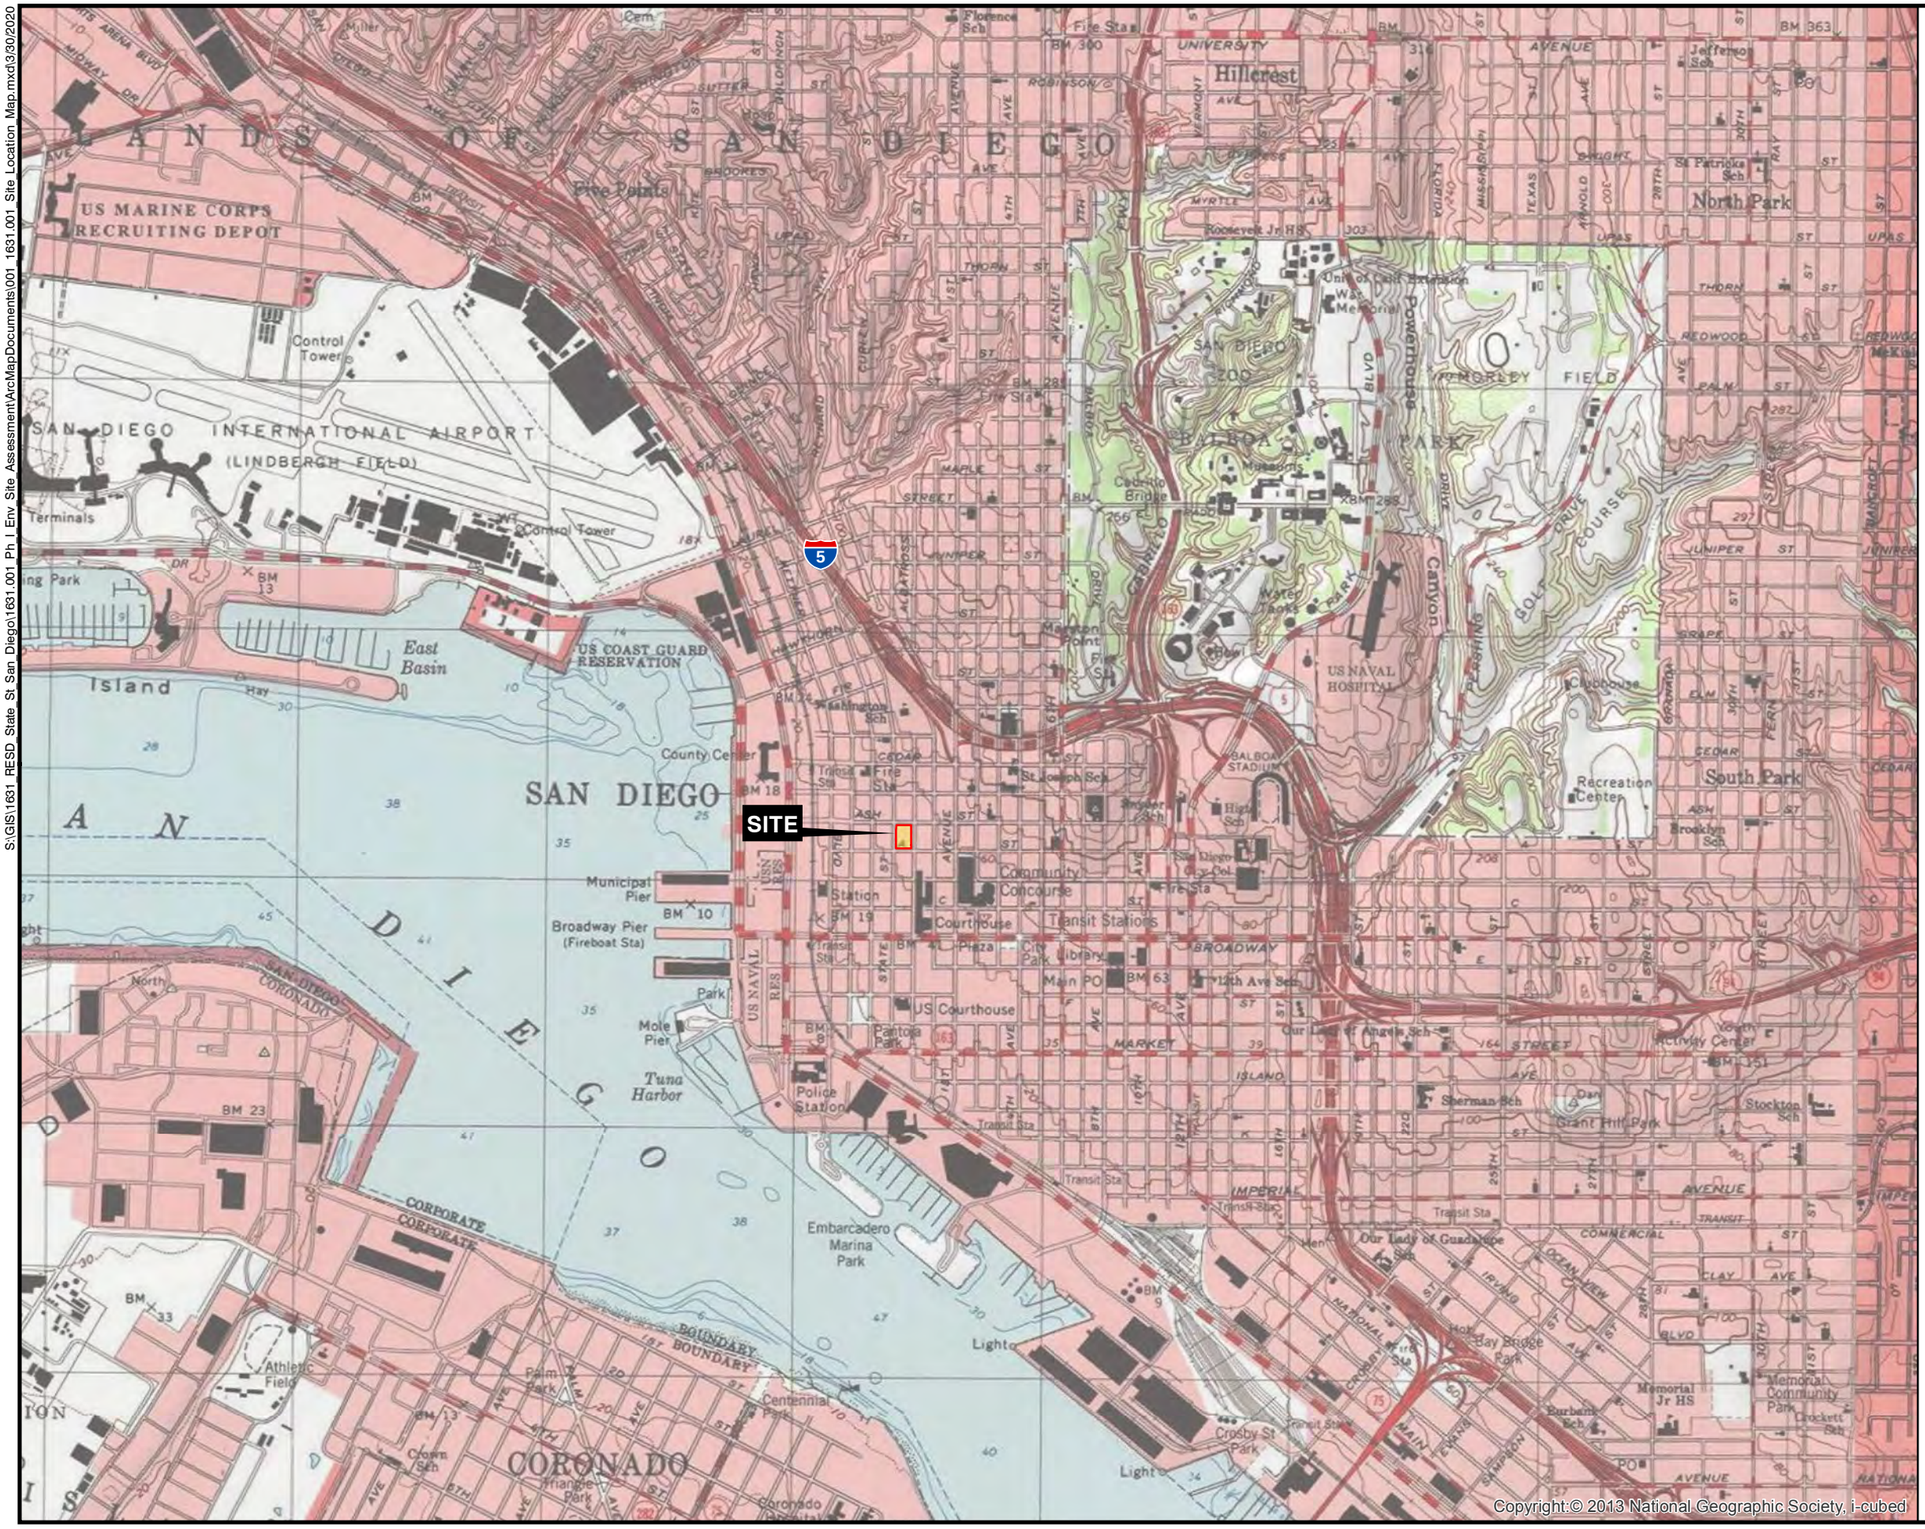
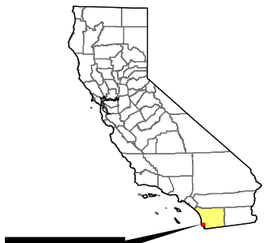
µg/m^3 = micrograms per cubic meter
SQL = sample quantitation limit
red values = analyte not detected above the indicated SQL
Orange highlight indicates precision criteria was not met
(1) Primary and duplicate samples analyzed by Eurofins Calscience
(2) Precision criteria for VOCs in non-aqueous samples is broken into two scenarios, as described below:
Scenario 1 – Where concentrations of both the primary and duplicate samples are greater than or equal to 5 times the SQL, they must have an RPD of less than 50
Scenario 2 – Where one or both sample/duplicate concentrations is less than the 5 times the SQL, the absolute difference must be lower than 4 times the SQL. It should be noted that when the SQL for the primary and duplicate samples are not equal, the lower more conservative SQL was used for comparison.
(3) Relative percent difference calculated as:



$$RPD = \frac{|V_1 - V_2|}{(V_1 + V_2)/2} \times 100$$



where V_1 = original sample result.
V_2 = duplicate sample result

Subject: Geophysical Investigation at Ash St and State St, San Diego, CA

Dear Mr. Ruud:

A geophysical investigation was conducted on the 12th of November 2021, on a portion of the property located at the intersection of Ash Street and State Street in San Diego, California, as directed by an Avocet representative. The purpose of the investigation was to screen an area for underground storage tanks (USTs).

Geophysical methods applied to this investigation included the Geometrics G858 magnetic gradiometer, the terrain conductivity meter (EM-31), a GSSI SIR3000 ground penetrating radar (GPR) system with a 350-MHz antenna, and a Metrotech 810 electromagnetic utility locator. Additional utility locating equipment were utilized such as an RD 8000 Radio detection unit and a Fisher TW-6.

METHODOLOGY

Details on these geophysical methods can be found in the attached application notes titled "Utility Clearance and Mapping Using Electromagnetic Methods" and "Geophysical Techniques for Shallow Environmental Investigations".

FIELD PROCEDURES

Metallic pipes apparent from surface features such as manholes, gas pumps, valve boxes, pipe stickups, etc. were traced and marked by connecting directly to the utility and applying an 8 kHz signal. A matched frequency receiver was then used to delineate the surface trace of the pipe.

The site was scanned with an RD 8000 in passive 60 Hz mode to locate any active electrical lines drawing a current. The non-reinforced areas of the site were scanned with a Fisher TW-6 deep search metal detector to locate abandoned metallic conduits that had no physical expression.

GPR data were collected throughout the site semi-continuously along south to north and west to east profiles spaced approximately 5-feet apart in an attempt to delineate the non-metallic lines. All GPR records were reviewed on site and any structures identified in this manner were marked on the ground and on a hand drawn, scaled site map, reproduced as Figure 1.

In order to identify underground storage tanks as well as possible utilities, a magnetic survey, and an EM-61 survey were conducted within the area of interest designated by a representative of Padre.

Measurements of the earth's total magnetic field and vertical gradient data were made with the G-858 at 0.2-second intervals as the operator walked along approximate south to north (S-N) survey lines nominally spaced 5 feet apart. The 0.2-second sampling interval resulted in an average station spacing of about 0.5 feet. The magnetic data were stored in the internal memory of the magnetometer. Magnetic data were downloaded to a laptop computer at the end of the magnetic survey.

Measurements of the top and bottom coil responses were made with the EM-61 at 2.5-foot intervals along gridded S-N survey lines spaced approximately 5 feet apart. EM-61 data were stored in a digital data logger along with grid coordinates and downloaded to a laptop computer after completion of the survey.

Measurements of terrain conductivity and in-phase response were made with the EM-31 at 5-foot intervals along gridded S-N survey lines spaced approximately 5 feet apart. EM-31 data were stored in a digital data logger along with grid coordinates and downloaded to a laptop computer after completion of the survey.

All utilities located by the geophysical survey were marked on the ground with surveyor's paint. Electric lines were marked in red, storm drains and sewer in green, natural gas in yellow, water in blue, and unknown pipes in pink.

DATA PROCESSING

Color-enhanced contour maps of the EM-61, EM-31, and magnetic data were generated using the Oasis montaj® geophysical mapping system. Prior to contour map generation, multiple preprocessing steps were completed and included:

- Backup of all original field data files.
- Correcting of all data acquisition errors (typically only deleting the first portion of a reacquired line, renaming lines incorrectly labeled, deleting additional readings outside the grid, etc.).
- Reformatting field data files to free format XYZ files containing line number, station, time (if applicable) and field measurements.
- Applying small adjustments to station locations to compensate for data being recorded while the operator was walking.
- Merging of multiple data files into a single file and sorting, if necessary.

These data adjustments were made using a combination of commercial and in-house software. All adjustments made to data files and resulting file names were documented and are retained in project files.

The output of the data preprocessing were data files containing line and station number and the geophysical measurements. These data files were imported into the Oasis montaj® mapping system and the following data processing steps applied:

- Reformatting of data files to Oasis montaj® format.
- Generating final map scale.
- Gridding data using a 1- to 2.5-foot cell size.
- Masking grid in areas where data were not acquired *(i.e.* around site perimeter).
- Applying a Hanning filter to smooth the data, if necessary.
- Generating color zone file describing color for different data ranges.
- Contouring the data.
- Generating map surrounds (title block, legend, scale, color bar, north arrow, etc.).
- Annotating anomalies.
- Merging various plot files and plotting final map.

The names of the files generated, and the processing parameters used were documented and are retained in project files. All files generated during the processing sequence were archived on a backup drive.

RESULTS

The site map with detected utilities is presented in Figure 1. The color-enhanced contour map of the magnetic total field response is presented as Figure 2. The color enhanced contour map of the EM-31 in-phase response is presented in Figure 3. A map of the EM-31 conductivity response was also produced but did not reveal any additional information and was therefore considered redundant. The color bars indicate the amplitude of the measured quantity with magenta and dark blue indicating high and low amplitudes, respectively. Light Orange, yellow, and light green indicate average “background” values of the measured quantity.

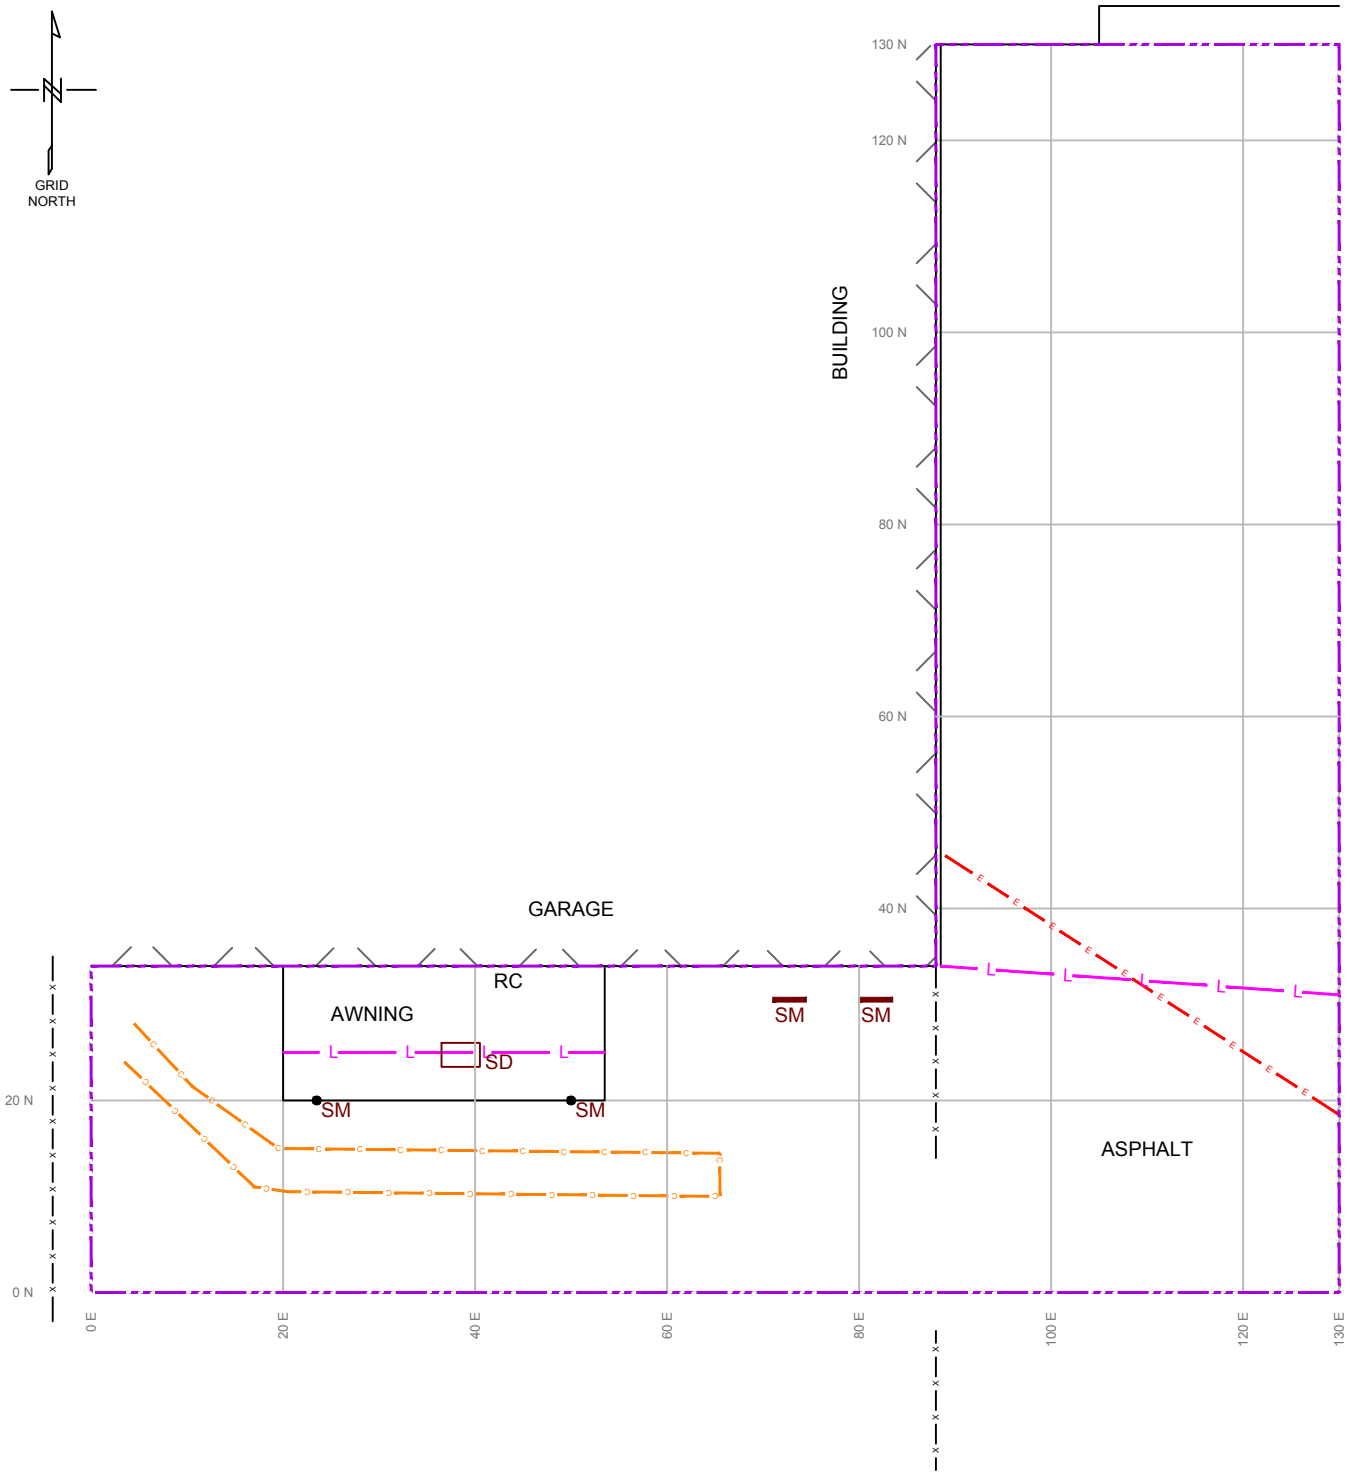
Several anomalies caused by surface metallic objects are evident on the contour maps of the magnetic and EM data. These anomalies are labeled “SM” on the contour maps. These anomalies correspond to buildings, fences, vehicles, and an overhead awning near the buildings’ garage (Figure 1).

One line and one partial line were able to be traced and marked in the field with utility locating equipment, reproduced on Figure 1.

There are no anomalies in the data sets indicating the presence of a UST.

If you have any questions concerning this investigation, please call Emily Feldman at 951-549-1234.

Sincerely,



Emily Feldman
Project Geophysicist

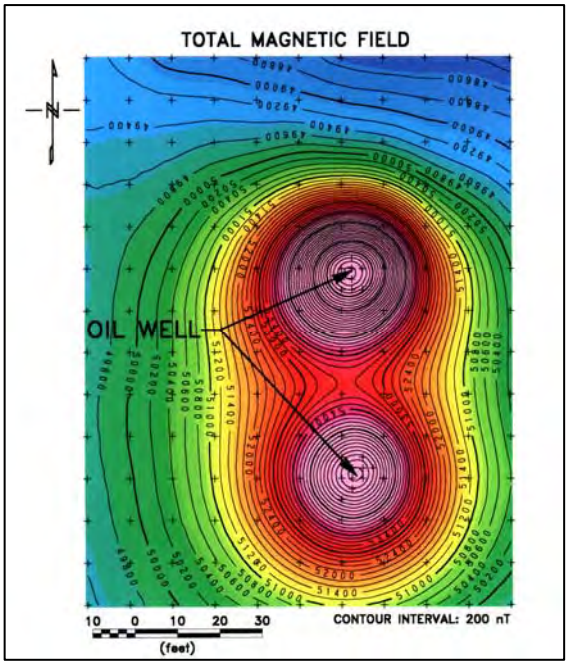
MAGNETIC METHOD

The magnetic method generally involves the measurement of the earth's magnetic field intensity or vertical gradient of the earth's magnetic field. Anomalies in the earth's magnetic field are caused by induced or remanent magnetism. Induced magnetic anomalies are the result of secondary magnetization induced in a ferrous body by the earth's magnetic field. The shape and amplitude of an induced magnetic anomaly is a function of the orientation, geometry, size, depth, and magnetic susceptibility of the body as well as the intensity and inclination of the earth's magnetic field in the survey area. The magnetic method is an effective way to search for small metallic objects, such as buried ordnance and drums, because magnetic anomalies have spatial dimensions much larger than those of the objects themselves. Typically, a single buried drum can be detected to a depth of about 10 feet. Larger metallic objects can often be located to greater depths. Induced magnetic anomalies over buried objects such as drums, pipes, tanks, and buried metallic debris generally exhibit an asymmetrical, south up/north down signature (positive response south of the object and negative response to the north).



Geometrics G858 Cesium Magnetic Gradiometer

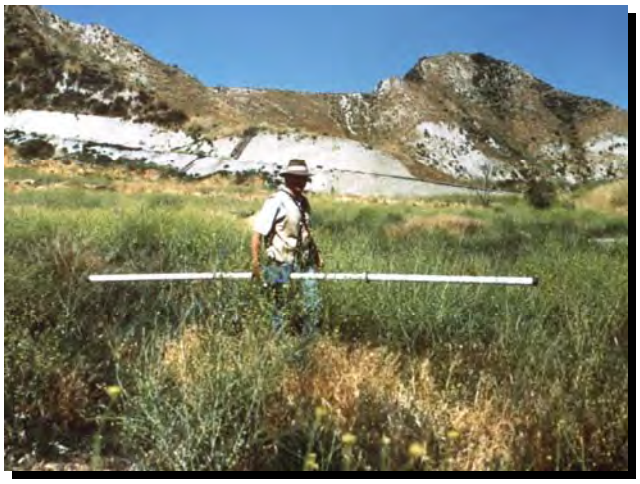
Magnetic data is typically acquired along a grid with results being presented as color-enhanced contour maps generated by the Geosoft™ Mapping System or OASIS montaj. The approximate location and depth of magnetic objects can be calculated using the Geosoft™ UXO System.

Magnetic Survey to Locate Pits Containing Buried Metallic Containers

Magnetic Survey to Locate Abandoned Oil Wells

Magnetic surveys are typically conducted to:

- Locate abandoned steel well casings
- Locate buried tanks and pipes
- Locate pits and trenches containing buried metallic debris
- Detect buried unexploded ordnance (UXO)
- Map old waste sites and landfill boundaries
- Clear drilling locations
- Map basement faults and geology
- Investigate archaeological sites

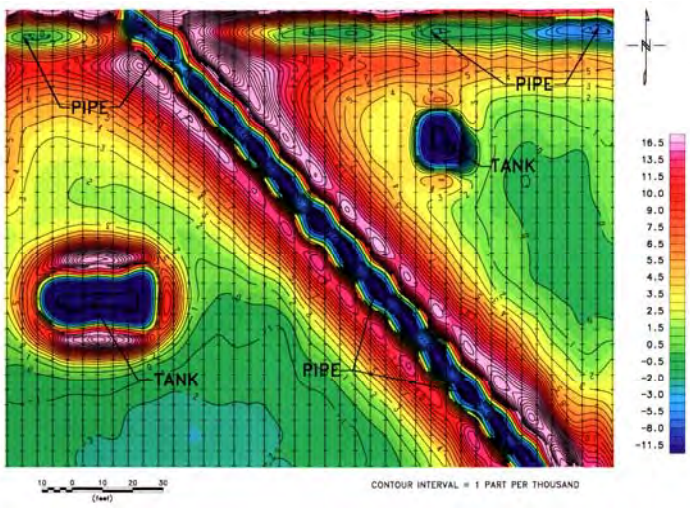


1124 Olympic Drive, Corona, California 92881, ph. 951-549-1234, fx. 951-549-123 www.geovision.com

ELECTROMAGNETIC METHODS

Electromagnetic (EM) methods typically applied to shallow environmental investigations include frequency domain EM methods, such as EM induction and EM utility location methods, time domain electromagnetic (TDEM) metal detection methods, and ground penetrating radar (GPR) methods.

EM Induction Method



EM induction surveys are often conducted using the Geonics EM-31 terrain conductivity meter (EM-31). The EM-31 consists of a transmitter coil mounted at one end and a receiver coil mounted at the other end of a 3.7-meter long plastic boom. Electrical conductivity and in-phase component field strength are measured and stored along with line and station numbers in a digital data logger. In-phase component measurements generally only respond to buried metallic objects; whereas conductivity measurements also respond to conductivity variations caused by changes in soil type, moisture or salinity and the presence of nonmetallic bulk wastes. The EM-31 must pass over or immediately adjacent to a buried metallic object to detect it. Typical EM-31 anomalies over small, buried metallic objects consist of a negative response centered over the object and a lower amplitude positive response to the sides of the object. When the instrument boom is oriented parallel to long, linear conductors such as pipelines a strong positive response is observed. The EM-31 can explore to depths of about 6 meters, but is most sensitive to materials about 1 meter below ground surface. Single buried drums can typically be detected to depths of about 5 feet.

Geonics EM-31 Terrain Conductivity Meter

EM-31 surveys are typically conducted to:

- Locate buried tanks and pipes
- Locate pits and trenches containing metallic and/or nonmetallic debris
- Delineate landfill boundaries
- Delineate oil production sumps and mud pits
- Map conductive soil and groundwater contamination
- Map soil salinity in agricultural areas
- Characterize shallow subsurface hydrogeology
  - Map buried channel deposits
  - Locate sand and gravel deposits
  - Locate conductive fault and fracture zones

Geonics EM-31 Survey to Locate Underground Storage Tanks

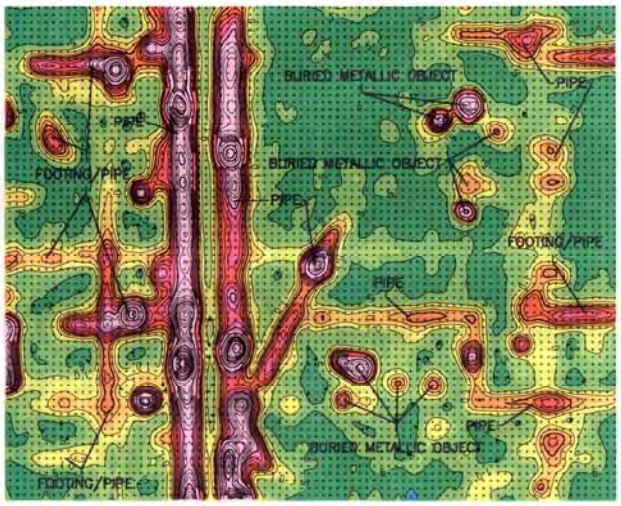
EM Utility Location Methods

EM utility locators; such as the Metrotech 810, Metrotech 9890 and Radiodetection RD400, are designed to accurately trace metallic pipes and utility cables and clear drilling/excavation locations. These utility locators consist of a separate transmitter and a receiver. The transmitter emits a radio frequency EM field that induces secondary fields in nearby metallic pipes and cables. The receiver detects these fields and is used to accurately locate and trace the pipes, often to distances over 200 feet from the transmitter. Many of the utility locators have a passive 60Hz mode to locate live electrical lines. Modern utility locators are also capable of providing rough depth estimates of the pipes.

⇦ ***Metrotech EM Utility Locator***

TDEM Metal Detection Methods

A Geonics EM-61 (EM-61) is a high sensitivity, time-domain, digital metal detector which is often used to detect both ferrous and non-ferrous metallic objects. It is designed specifically to locate buried metallic objects such as drums, tanks, pipes, UXO, and metallic debris and to be relatively insensitive to above ground structures such as fences, buildings, and vehicles.



Geonics EM-61 Digital Metal Detector

The EM-61 consists of two square, 1-meter coils, one mounted over the other and arranged on a hand-towed cart. The bottom coil acts as both a transmitter and receiver while the top coil is a receiver only. While transmitting the bottom coil generates a pulsed primary magnetic field, which induces eddy currents into nearby metallic objects. When the transmitter is in its off cycle both coils measure the decay of these eddy currents in millivolts (mV) with the results being stored in a digital data logger along with position information. The decay of the eddy currents is proportional to the size and depth of the metallic target. A symmetrical positive anomaly is recorded over metallic objects with the peak centered over the object.

The signal from the top coil is amplified in such a way that both coils record effectively the same response for a metallic object on the surface and the top coil records a larger response for buried metallic objects. The response of near surface objects can, therefore, be suppressed by subtracting the lower coil response from the upper coil response (differential response).

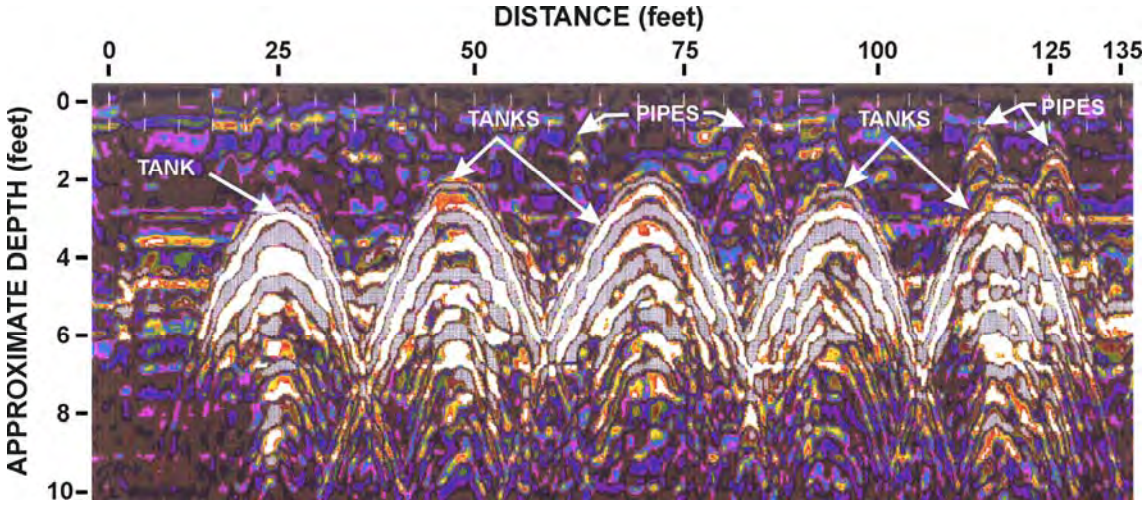
In practice, the usable depth of investigation of the EM-61 depends on the size and shape of the object and the amount of above ground interference encountered at the site. A single buried drum can often be detected at a depth of about 10 feet.

Geonics EM-61 Survey to Map Subsurface Infrastructure

GPR Methods

Ground-penetrating radar (GPR) is a high-frequency electro-magnetic method commonly applied to a number of engineering and environmental problems.

GSSI SIR-10A GPR Unit



A GPR system radiates short pulses of high-frequency EM energy into the ground from a transmitting antenna. This EM wave propagates into the ground at a velocity that is primarily a function of the relative dielectric permittivity of subsurface materials. When this wave encounters the interface of two materials having different dielectric properties, a portion of the energy is reflected back to the surface, where it is detected by a receiver antenna and transmitted to a control unit for processing and display.

Depth penetration is a function of antenna frequency and the electrical conductivity of the soils in the survey area. Lower frequency antennas achieve greater depth penetration than higher frequency antennas, but have poorer spatial resolution. Conductive soils, such as clays, attenuate the radar waves much more rapidly than resistive dry sand and rock. In many environments in California, depth penetration of 500 and 300 MHz antennas is limited to 3 to 5 feet. Depth penetration may be greater if shallow soils consist of clean sands and less if shallow soils consist of clay.

GPR surveys are typically conducted to:

- Locate and delineate underground storage tanks (metallic and non-metallic)
- Locate metallic and nonmetallic pipes and utility cables
- Map rebar in concrete structures
- Map landfill boundaries
- Delineate pits and trenches containing metallic and nonmetallic debris
- Delineate leach fields and industrial cribs
- Delineate previously excavated and backfilled areas
- Map shallow groundwater tables
- Map shallow soil stratigraphy
- Map shallow bedrock topography
- Map shallow subsurface voids and cavities
- Characterize archaeological sites

Geophysical Survey Systems Inc. (GSSI) SIR-2 or SIR-10 GPR systems with antennas in the frequency range of 50 to 1,000 MHz are often used during GPR investigations. Mala Geoscience and Sensors and Software, Ltd also manufacture GPR systems. GPR data is processed using a variety of software including the RADAN™ or GRADIX software packages by GSSI and Interpex Ltd., respectively.

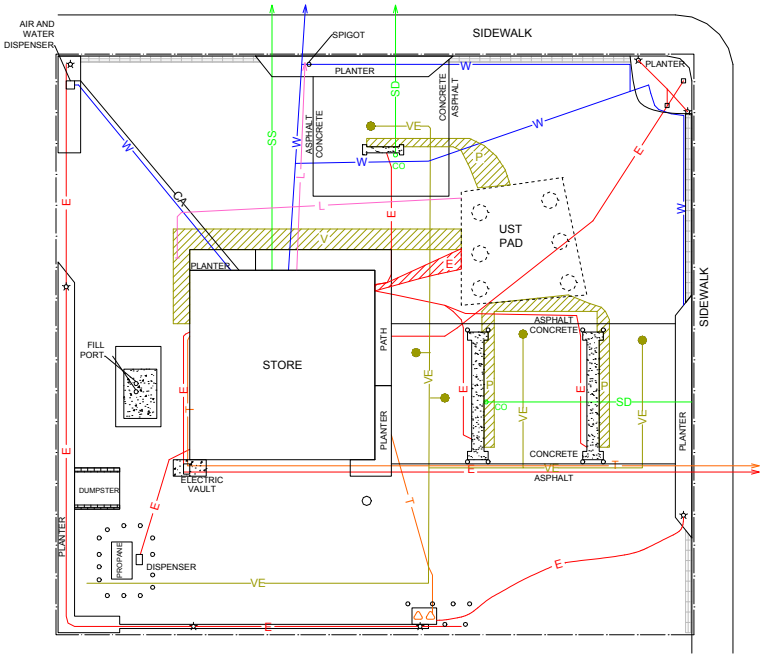
GPR Survey to Locate Underground Storage Tanks

UTILITY CLEARANCE AND MAPPING USING ELECTROMAGNETIC METHODS

GEOVision geophysical services

In complex urban settings **GEO***Vision* commonly uses electromagnetic (EM) utility locating techniques to clear proposed boring, trenching and excavation locations.

GEO*Vision* area clearance procedures:



1. Visually inspect area for manholes, valve boxes etc as well as review available utility plans
2. Each identified utility will be traced out using EM utility-locating instruments (RD-8000 and Metrotech 810)
3. Scan the area in passive 50/60 HZ and radio modes to locate active electrical lines and other lines carrying a passive radio signal.
4. Screen the area using Fisher TW-6 to identify abandoned conduits
5. Insert transmitting sonde and camera into sanitary sewers and storm drains and delineate their surface trace with a matched frequency receiver
6. Conduct perpendicular GPR traverses through the area to detect non-metallic lines (GSSI SIR10B, SIR20, SIR2000, or SIR3000)
7. Hold EM utility locator transmitter at various locations in area and circle at about a 40-foot radius with the receiver
8. Mark all identified lines on the ground in color code established by American Public Works Association and map site.

Ground Penetrating Radar and 50/60HZ

Boring Logs

AVOCET
ENVIRONMENTAL, INC.

Key to Soil Symbols and Terms

Major Divisions		Graphic Log	USCS Symbols	Typical Names
Coarse-Grained Soils (More than half of material is larger than No. 200 sieve)				
GRAVELS (More than half of coarse fraction is larger than No. 4 sieve.)	Clean Gravel (little or no fines)		GW	Well graded gravels, gravel-sand mixtures
			GP	Poorly graded gravels, gravel-sand mixtures, little or no fines
	Gravels with Fines (appreciable amounts of fines)		GM	Silty gravels, gravel-sand silt mixtures
			GC	Clayey gravels, gravel-sand, clay mixture
SANDS (More than half of coarse fraction is smaller than No. 4 sieve)	Clean Sands (little or no fines)		SW	Well graded sands, gravelly sand, little or no fines
			SP	Poorly graded sands, gravelly sands, little or no fines
	Sands and Fines (appreciable amounts of fines)		SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, sand-clay mixtures
Fine-Grained Soils (More than half of material is smaller than No. 200 Sieve)				
SILTS AND CLAYS (Liquid limit less than 50)			ML	Silts and very fine sands, rock-flour, silty or clayey fine sands, or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silty clays of low plasticity
SILTS AND CLAYS (Liquid limit greater than 50)			MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
			CH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS			Pt	Peat and other highly organic soils

Soil Moisture

From low to high, soil moisture is indicated by:

DRY	No apparent moisture
SLIGHTLY MOIST	Slight moisture content (well below optimum)
MOIST	Near optimum moisture content for compaction
VERY MOIST	Over optimum moisture content
WET	Water completely fills soil voids (e.g. below water table)

Terms used in this report for describing soils according to their texture or grain size distributions are generally in accordance with the Unified Soil Classification System

Terms Describing Density and Consistency

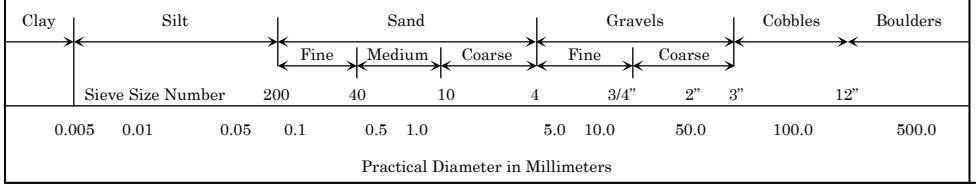
COARSE-GRAINED SOILS (major portion retained on No. 200 sieve) include (1) clean gravels, (2) silty or clayey gravels, and (3) silty, clayey or gravelly sand. Relative density is related to SPT blow count corrected for overburden pressure or drive energy.

Relative Density	SPT "N" Value (Blows/ft)	Relative Density %	Characteristic
Very Loose	0 - 4	0 - 15	Easily penetrated with 1/2-inch reinforcing rod pushed by hand
Loose	4 - 10	15 - 40	Easily penetrated with 1/2-inch reinforcing rod pushed by hand
Medium Dense	10 - 30	40 - 70	Penetrated a foot with 1/2-inch reinforcing rod driven with a 5-lb hammer
Dense	30 - 50	70 - 85	Penetrated a foot with 1/2-inch reinforcing rod driven with a 5-lb hammer
Very Dense	>50	85 - 100	Penetrated only a few inches with 1/2-inch reinforcing rod driven with a 5-lb hammer

FINE-GRAINED SOILS (major portion retained on No. 200 sieve) include (1) inorganic and organic silts and clays, (2) gravelly, sandy or silty clays, and (3) clayey silts. Consistency is rated according to shearing strength, as indicated by penetrometer readings, direct shear, or SPT blow count.

Consistency	SPT "N" Value (Blows/ft)	Characteristic
Very Soft	0 - 2	Easily penetrated a few inches by fist
Soft	2 - 4	Easily penetrated a few inches by thumb
Firm	4 - 8	Penetrated a few inches by thumb with effort
Stiff	8 - 16	Readily indented by thumb, but penetrated only with great effort
Very Stiff	16 - 32	Readily indented by thumbnail
Hard	>32	Indented with difficulty

Note: Characteristics and blow counts considered uncemented deposits only. Blow count (blow/foot) is by Standard Penetration Test (SPT): 2-inch diameter sampler driven by 140-pound hammer free falling 30-inches.



Terms Characterizing Soil Structure

SLICKENSIDED	Having inclined planes of weakness that are slick and glossy in appearance
FISSURED	Having shrinkage cracks, frequently filled with fine sand or silt, usually vertical
LAMINATED	Composed of thin layers of varying color and texture
INTERBEDDED	Composed of alternate layers of different soil types
CALCAREOUS	Containing appreciable quantities of calcium carbonate
WELL GRADED	Wide range in grain sizes and substantial amounts of intermediate particle sizes
POORLY GRADED	Mostly one grain size, or having a range of sizes without some intermediate sizes
POROUS	Having visibly apparent void spaces through which water, air, or light may pass

Size Proportions

DESIGNATION	PERCENT BY WEIGHT
TRACE	1 to 10
LITTLE	10 to 20
SOME	20 to 30

Grain Size Distribution

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Avocet Environmental Inc
Job ID: 570-76400-1
Project/Site: RESD State Street Property / 1631.002

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
me	LCS Recovery is within Marginal Exdeedance (ME) control limit range (± 4 SD from the mean).

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-76400-1

Comments
No additional comments.

Receipt
The samples were received on 11/18/2021 3:12 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.7º C.

Receipt Exceptions

The following samples were submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): SS_SG-7_1 (570-76400-16), SS_SG-7_5 (570-76400-17) and SS_SG-7_15 (570-76400-18)

GC/MS VOA
Method 8260B: The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch. Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-195720.

Method 8260B: The continuing calibration verification (CCV) associated with batch 570-195856 recovered above the upper control limit for Chloromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 570-195856/2).

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-195856.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The laboratory control sample (LCS) for analytical batch 570-195856 recovered outside control limits for the following analytes: Chloromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260B: The following analyte(s) recovered outside control limits for the LCSD associated with analytical batch 570-195895: Bromoform. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 570-195895 recovered outside control limits for the following analytes: 2-Methyl-2-propanol.

Method 8260B: The continuing calibration verification (CCV) associated with batch 570-195895 recovered above the upper control limit for Ethanol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SS_SG-7_5 (570-76400-17), SS_SG-7_15 (570-76400-18) and (CCVIS 570-195895/2).

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-195895.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-196214.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The following analyte(s) recovered outside control limits for the LCS/LCSD associated with analytical batch 570-196214: Chloromethane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified

Job ID: 570-76400-1 (Continued)

Laboratory: Eurofins Calscience LLC (Continued)

results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-196440 and analytical batch 570-197113 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Creator: Cruise, Noel

List Source: Eurofins Calscience LLC

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Avocet Environmental Inc
Job ID: 570-76406-1
Project/Site: RESD State Street Property / 1631.002

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
L	A negative instrument reading had an absolute value greater than the reporting limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 11/18/2021 3:13 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.5º C.

GC/MS VOA
Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-195848.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-196210. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-196214.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The following analyte(s) recovered outside control limits for the LCS/LCSD associated with analytical batch 570-196214: Chloromethane. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-196419 and analytical batch 570-197249 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The absolute response for Arsenic and Molybdenum was greater than the method reporting limit (RL) in the following sample: SS_SG-18_5 (570-76406-7).
The instrument raw data has been manually reviewed and the result can be reported as ND.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Avocet Environmental Inc
Job ID: 570-76402-1
Project/Site: RESD State Street Property / 1631.002

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
me	LCS Recovery is within Marginal Exdeedance (ME) control limit range (± 4 SD from the mean).

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
L	A negative instrument reading had an absolute value greater than the reporting limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Client: Avocet Environmental Inc

Narrative

Job Narrative
570-76402-1

Comments
No additional comments.

Receipt
The samples were received on 11/18/2021 3:11 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.0º C.

Receipt Exceptions

The laboratory did not receive 3-TerraCore vials for EPA 8260 analysis that was requested on the Chain-of-Custody on the following sample: SS_SG-15_15 (570-76402-3).

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

GC/MS VOA
Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-195997.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: The following analyte(s) recovered outside control limits for the LCSD associated with analytical batch 570-195895: Bromoform. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 570-195895 recovered outside control limits for the following analytes: 2-Methyl-2-propanol.

Method 8260B: The continuing calibration verification (CCV) associated with batch 570-195895 recovered above the upper control limit for Ethanol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: SS_SG-15_5 (570-76402-2), SS_SG-10_5 (570-76402-4) and (CCVIS 570-195895/2).

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-195895.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-196210. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-196553 and analytical batch 570-197249 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The absolute response for Arsenic and Molybdenum was greater than the method reporting limit (RL) in the following sample: SS_SG-13_5 (570-76402-16).
The instrument raw data has been manually reviewed and the result can be reported as ND.

Job ID: 570-76402-1 (Continued)

Laboratory: Eurofins Calscience LLC (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Erick,

Yes, please run sample SS_SG-15_15 for EPA 8260 analysis using the soil provided in the stainless-steel sleeve.

Thank you,

Hi Scott,

Yes. We can run the sample using the volume provided from the sleeve. We would need confirmation from you that you would like us to proceed way.

Best Regards,

Erick Ovalle

EXTERNAL EMAIL*

Erick,

Is it possible to run this analysis using the soil given in the sample sleeve? Feel free to call me at (979)-824-5156 to discuss our options. Thank you so much for your help.

Hello,

Attached please find the sample confirmation files for job 570-76402-1; RESD State Street Property / 1631.002

1. The laboratory did not receive 3-TerraCore vials for EPA 8260 analysis that was requested on the Chain-of-Custody on the following sample: SS_SG-15_15 (570-76402-3).

ACTION: Please review and advise on how to proceed. Thank you!

Please feel free to contact me if you have any questions.

Thank you.

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
me	LCS Recovery is within Marginal Exdeedance (ME) control limit range (± 4 SD from the mean).

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins Calscience LLC

Narrative

Job Narrative
570-76946-1

Comments
No additional comments.

Receipt
The samples were received on 11/24/2021 4:46 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
Method TO-15: The following analyte(s) recovered outside control limits for the LCS associated with analytical batch 570-196956: Isopropyl alcohol. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Avocet Environmental Inc
Job ID: 570-76946-1
Project/Site: RESD State Street Property

Laboratory: Eurofins Calscience LLC

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Oregon	NELAP	CA300001	01-30-22

Method Summary

Client: Avocet Environmental Inc
Project/Site: RESD State Street Property

Job ID: 570-76946-1

Method	Method Description	Protocol	Laboratory
TO-15	Volatile Organic Compounds in Ambient Air	EPA	ECL 2

Protocol References:

EPA = US Environmental Protection Agency

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Summa Canister Dilution Worksheet

Client: Avocet Environmental Inc
Project/Site: RESD State Street Property

Job No.: 570-76946-1

Formulae:

Preadjusted Volume (L) = ((Preadjusted Pressure ("Hg) + 29.92 "Hg) * Vol L) / 29.92 "Hg

Adjusted Volume (L) = ((Adjusted Pressure (psig) + 14.7 psig)* Vol L) / 14.7 psig

Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)

14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Avocet Environmental Inc
Project/Site: RESD State Street Property

Job ID: 570-76967-1

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The sample was received on 11/24/2021 4:46 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.0º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-197815 and analytical batch 570-198228 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Avocet Environmental Inc
Project/Site: RESD State Street Property

Job ID: 570-76967-1

Client Sample ID: IDW_20211124

Lab Sample ID: 570-76967-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Description of Soil	Moisture Content	Contaminated by:	Approx. Qty:	Description of Delivery	Gross Weight	Tare Weight	Net Weight
Sand ❑ Organic ❑ Clay ❑ Other ❑	0 - 10% ❑ 10 - 20% ❑ 20% - over ❑	Gas ❑ Diesel ❑ Other ❑	3				
Sand ❑ Organic ❑ Clay ❑ Other ❑	0 - 10% ❑ 10 - 20% ❑ 20% - over ❑	Gas ❑ Diesel ❑ Other ❑					

List any exception to items listed above: AIS Project # 42009-3-7
Scale Ticket #

Generator's and/or consultant's certification: I/We certify that the soil referenced herein is taken entirely from those soils descried in the Soil Data Sheet completed and certified by me/us for the Generation Site shown above and nothing has been added or done to such soil that would alter it in any way.

Print or Type Name: Generator ❑ Consultant ☑
David Lehrman, CHMM, CPG, REA
Signature and date: Month 2 Day 23 Year 22

Transporter

Transporter's certification: I/We acknowledge receipt of the soil referenced above and certify that such soil is being delivered in exactly the same condition as when received. I/We further certify that the soil is being directly transported from the Generation Site to the Designated Facility without off-loading, adding to, subtracting from or in any way delaying delivery to such site.

Print or Type Name: EDDIE LINO
Signature and date: Month 2 Day 23 Year 22

Recycling Facility

Discrepancies:

Recycling Facility certifies the receipt of the soil covered by this manifest except as noted above:

Print or Type Name: J. Provansal
Signature and date:

Please print or type.

TONS _____

DRUMS 3

Please check appropriate box below and attach all required analytical reports. Unless otherwise noted, composite samples should be collected with the following frequency: 1 sample for 100 cubic yards or less ; 3 samples for 500 cu yds or less ; 5 samples for 1000 cu yds & 1 additional sample for each additional 500cu yds greater than 1000 cu yc

☐ I/we certify that the soil referenced herein is contaminated solely by Virgin petroleum products from leaking underground storage tank's).

Attached is analytical data from state certified lab for the following

1) Total Petroleum Hydrocarbons **(TPH, EPA 8015 Modified)**

2) Benzene/Toluene/Ethylbenzene/xylene **& MTBE (BTEX, EPA 8020)**

☑ I/We certified that some or all of the contaminants in the soil referenced herein is waste oil, or some other non-virgin petroleum product, or virgin petroleum product from something other than a leaking underground storage tank.

Attached is analytical data from a state certified lab for the following:

1) Total metals concentration for a thru q below (TTLC test)

a) Antimony	g)	Cobalt	m)	Selenium	
b) Arsenic	h)	Copper	n)	Silver	
c) Barium	I)	Lead	o)	Thallium	
d) Beryllium	j)	Mercury	p)	Vanadium	
e) Cadmium	k)	Molybdenum	q)	Zinc	
f) Chromium	l)	Nickel			

Note: If any item a thru q is greater than 10 times its Soluble Threshold Limit concentration (STLC) the soluble metal concentration must be determined by the Waste Extraction Test procedure.

2)TPH by:
EPA 418.1 or
EPA 8015 modified

3) BTEX/VOC by:
EPA 8020 & EPA 8010
or EPA 8260(combines above)

4)PCB'S(waste oil only)

5)Additional analytical data as required.

No soils referenced herein may be delivered until the forgoing certificate is received and approved by the facility, and they issues manifests and assigns an approval number. If any soils delivered to the facility are found to be "Hazardous Waste" pursuant to federal or state regulations, the client shall be solely responsible for their removal. If the client fails to remove such soils, the facility, acting as client's agent, may arrange for such removal at client's expense.

This is a complete and accurate description of the soil referenced herein; no deliberate or willful omissions have been made and all known or suspected hazards have been disclosed herein. I/We certify that the soil is not "hazardous" as defined by U.S. Department of Transportation (DOT), U.S. Environmental Protection Agency (EPA), State or local regulations. I/We further certify that the soils referenced herein contain no free liquids. All analysis reports attached.
