Violation Date: 11-20-2018
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Inspection Sequence ID:6030917;Tank ID:28511;Violation Description:(TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equip

Longitude:	-117.16964006424
Case Type:	Cleanup Program Site
Case Worker:	LA
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Lead, Total Petroleum Hydrocarbons (TPH)
Site History:	The site was a parking lot located within an area of downtown San Diego mainly developed with commercial office and multi-tenant residential properties. The 26,250-square foot unattended asphalt parking lot contained no site structures and is located within a city block that abuts the West Beech Street on the northern end, and Kettner Blvd. on the eastern portion of the site. The multistory US Bank Bldg. occupies the southern portion of the block. A Voluntary Assistance Program (VAP) application was submitted to the County of San Diego, Department of Environmental Health (DEH) by Ariel Suites LC, to provide regulatory oversight, for the excavation activities associated with the construction of an underground parking garage and multistory apartment project. Historically, the parcels identified as 1450 and 1472 Kettner Blvd. and 745 W. Beech Street were residential and later on were operated as auto service garages, auto sales, auto towing, and more recently, as parking lots. A preconstruction investigation was conducted to develop a soil management plan, since the presence of lead and other metals in surface soils and potential fuel-contaminated soils determine the soil disposal options. The entire site was divided into 25 sampling blocks of equal area with one random sample location generated per sampling block. Due to the parking lot site being divided into an upper and lower level by a concrete retaining wall, the number of blocks was modified to 21 in order to eliminate any sampling block containing both an upper and lower level portion of the parking lot. Most of the soil samples were collected using a direct-push drilling rig from 4 feet to 6 feet below ground surface (bgs) and were analyzed for Title 22 metals. Samples that exceeded the regulatory thresholds were also analyzed for Soluble Threshold Limit Concentration (STLC) or TCLP procedures. At the same time, pump test wells were being drilled at the western edge of the lower lot. Deeper soil samples were obtained during the drilling of the test wells and were analyzed for total petroleum hydrocarbons (TPH) to determine the presence of fuel-impacted soils. After discovering the presence of fuel contaminated soil in two of the pump test wells sample locations, it was decided to advance 3 additional deep borings to further delineate the extent. The results of this initial soils investigation indicated lead is the main contaminant of concern. Of the 15 samples obtained with elevated lead concentrations, 12 of them were also above the Soluble Threshold Limit Concentration (STLC) California Hazardous Waste threshold of 5 mg/l. Additionally, one soil sample contained mercury at 6.32 mg/kg, a concentration found to be above Total Threshold Limit Concentration (TTLC). The lead contaminated soil was found at depths ranging from 0 to 6 feet below ground surface (bgs). Areas of lead contaminated soil were mapped out during the investigation along with one area of fuel contaminated soil (FCS). The FCS is located between 18 and 24 feet (bgs). An abandoned utility pipe was found adjacent to the FCS and it believed to be a potential source of the contamination. The construction project required the excavation of all the soil,

ARIEL SUITES (Continued) **S111417967**

including the contaminated soil, beneath the project site to depths ranging from 47 to 52 feet bgs to accommodate the underground parking garage. Based on the findings of the investigation, a Soil Management Plan & Progress Report and Community Health and Safety Plan were submitted to DEH for review. The estimated volume of waste and inert soil to be excavated and exported was 45,000 cubic yards. The report indicates that a waste discharge requirements (WDR) waiver was obtained from the Regional Water Quality Control Board (RWQCB) for reuse of the inert soil from the project site. Also, due to the planned depth of the excavation, a major dewatering effort was required to advance the construction below the water table. The report states that the potential contaminated waste water has been permitted for discharge to the storm drain under authority of the RWQCB. All of the soil within the construction excavation activities was considered remedial waste to be evaluated for the appropriate disposition. The evaluation was conducted during the entire excavation project using visual observation and field screening methods. The lead contaminated soil was found in numerous small burned trash fill deposits which were also archeological-significant features and therefore, required stockpiling of the soil prior to disposal. The lead contaminated stockpiles were managed to minimize dust and to prevent surface and rainwater runoff and were removed for disposition, in a timely manner; based on the sampling laboratory results. For the lead contaminated soil, an x-ray fluorescence device (XRF) was utilized in conjunction with soil samples analyzed by a laboratory for screening purposes. Laboratory results indicated that California-hazardous waste levels were encountered making it necessary for the lead contaminated soil disposal to be outside of San Diego County, at the Copper Mountain Landfill in Arizona. The screening of the FCS was handled differently. Since the unrestricted soil reuse criteria is established as the olfactory detection limit, and it has been demonstrated that older highly degraded fuel contaminated soil may contain odors, even though there are no laboratory detectable concentrations volatile organic compounds (VOCs); additional soil sampling and screening was required to properly characterize the waste. The FCS was found in the northwest corner of the site, creating a bottleneck for trucks and excavators, and therefore the excavated soil could not be directly loaded on to the trucks. The soil was placed in stockpiles and managed to minimize dust and to prevent surface and rainwater runoff. VOC and dust readings were monitored continuously during the movement of the soil. Based on laboratory and screening results, the FCS was determined to be eligible for disposal at a Class III landfill in San Diego County.
At the bottom of the excavation there was a significant amount of groundwater seepage observed from the excavation sidewall due to the inefficiency of the dewatering system. A grab sample was collected in the northwest corner and was submitted for analysis. The laboratory analytical results indicate the presence of Tetrachloroethene (PCE), a common dry-cleaning solvent, at a concentration of 3.88 a%g/l. The groundwater in this area does not have any beneficial uses.
Confirmational sampling was conducted for both lead and fuel contaminated soil to determine the concentrations of contaminants of concern remaining outside of the excavation and evaluate if they pose a risk to future building occupants. A total of 145 lead contaminated soil verification samples were collected from the total range of depths of the excavation. The 90% Upper Confidence Interval for the mean lead concentration observed was between 1.12 and 3.18 mg/kg.

ARIEL SUITES (Continued) **S111417967**

This concentration is well below any risk criteria for lead remaining in soil. 66 confirmational samples were also collected from the bottom and sides of the fuel contaminated soil layer and from the excavation side walls. All of the residual contamination is located outside the parking garages concrete walls at a depth of approximately 15 feet bgs. A vapor risk assessment was conducted using an overly conservation concentration of naphthalene, the only contaminant of concern in the fuel contaminated soil, and the model results indicate there is no increased health risk to occupants of the building from this contaminant. The PCE concentration found in the grab water sample was also run through the vapor risk model and the results indicate there is not an increased health risk based on the PCE found in the groundwater sample.

STEVE'S AUTO BODY (Continued) **S113804500**

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Diesel, Gasoline
Site History: The documentation of Steves Auto Body (Former San Diego Fuel Injection) indicates case number H06030-001 was opened in March 1993 following review by DEH of the City block bounded by Cedar Street, Kettner Boulevard, Beach Street and the railroad tracks to the west. In December 1984 a total of five underground storage tanks (USTs) were removed and a number of tanks showing evidence the tanks were leaking. At that time, the release was reported to the RWQCB for further action. No action was taken by the RWQCB. In 1993 the County purchased this property and discovered significant soil, groundwater and free-product impacts on the western portion of the block into the railroad right-of-way. The impacts and the associated mitigation were competed under case number H06030-002 and closed in September 1999. In general, the case was opened due to the indication of hydrocarbon vapors in a boring adjacent to the former UST #6 and the soil and groundwater impacts in Beech Street in MW-13, MW-20 and MW-21. This tank was located away from the activities associated with case H06030-002. In 1984 soil samples were not taken at the time of the tank removal. In 1993, DEH requested additional boring(s) be drilled to sample potential soil impacts beneath the former UST to verify if a release had occurred. In February 2015, during recent redevelopment activities of this city block, the required investigation was completed, which verified there was not a significant release from this former UST. It should be noted that the impacts to groundwater identified in MW-20 and MW-21 were associated with the H06030-002 release. Soil and Groundwater data that pre-dates GeoTracker are summarized in the following table. Summary of Groundwater Monitoring Data for MW-13, MW-20 and MW-21. Field Point TPHg TPHd Benzene Toluene Ethylbenzene Xylene MTBE (ug/l) (ug/l) (ug/l) (ug/l) (ug/l) (ug/l) (ug/l) MW-13 (B-13) <500 <500 6.4 1.2 <0.5 <1.5 <5.0 MW-20 (B-20) 13,000 15,000 100 35 10.7 41.3 <5.0 MW-21 (B-21) --- 85,000 5.1 <0.5 <0.5 <1.5 --- Note: Free-product was observed in MW-21 (B-21) from 9/15/1994 through 11/5/1996. Free-product thickness ranged from at 0.02 to 0.06 feet. Soil and Groundwater data that is in GeoTracker but does not show up in the most recent concentrations in the provided Conceptual Site Model: Groundwater Field Point Date TPHg TPHd TPHo (ug/l) (ug/l) (ug/l) MW-20 1/21/2015 540 2300 <480 SB-4 1/22/2015 <50 <480 <480 Soil Field Point Date TPHg TPHd TPHo (mg/kg) (mg/kg) (mg/kg) SB-1 1/21/2015 <0.4 <5 <5 SB-2 1/21/2015 <0.4 <5 <5 SB-3 1/21/2015 <0.4 14 <5 SB-4 1/21/2015 <0.4 14 <5 Correction to SCM: The attached SCM identifies under the heading of Public Water System(s) the Metropolitan Water District of Southern California which is incorrect. The San Diego County Water Authority provides imported water to the City of San Diego.

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Diesel, Gasoline
Site History: The site is the block bounded by Cedar Street to the north, Beech Street to the south, Kettner Boulevard to the east and the railroad tracks to the west. The site, starting around 1903, was used for an above ground fuel storage tank (AST) farm consisting of three ASTs and a fuel pipeline that extended west down Beech Street to San Diego Bay. This facility was operated by Hercules Oil Refining Company. Site uses changed over time. By the 1980s, the southwest corner of the block was occupied by a three story office building, the southeast corner of the site was occupied by San Diego Diesel Fuel

COUNTY OF SAN DIEGO (Continued) **S103632279**

Injection, the northern quarter of the block was occupied by Courtesy Auto Rental and the central part of the block was occupied by Steves Auto Body. Two Underground storage tank (UST) cases were opened in 1993. H06030-001 was opened covering the UST removed from the San Diego Diesel Fuel Injection site and the second case (H06030-002) was opened covering the UST release associated with the tanks located on Steves Auto Body. Case H06030-003 was opened in 2003 as a Voluntary Assistance Program case to oversee the investigation and implementation of a soil management plan for a project that would require over excavation for parking and a six story office building. This project was shelved sometime in 2005. On May 14, 2012, the County Department of General Services re-activated the case. The new scope of work was the development of the site (the Project Area), not including the southern portion of the block that had the three story building (Star Building) and where San Diego Diesel Fuel Injection was located. The project was to build a multi-level parking structure that is both below grade (total depth 30 feet) and above grade. Since the closure of case H06030-002, there have been seven (7) environmental/geotechnical investigations completed with data provided in a total of six (6) separate reports or submittals. These investigations identified shallow surficial soil that had isolated locations of lead impacts up to depths of 6 feet with petroleum impacts extending from the surface to depths of approximately 36 feet below grade. There was a cistern and an area where limited burn ash found. Impacted soil mitigation for this project was limited to the immediate area of the building excavation. The Project Area outside the building excavation was not mitigated. These areas are primarily limited to the south and southeast of the parking structure. Subsurface soil contamination extends beyond the Project Area boundaries to the west and south. In the event that soils are to be excavated and/or removed, the soils will have to be handled and disposed in accordance with the relevant regulations at that time. Within the footprint of the building excavation, a total of 57,294 tons (approximately 36,905 cubic yards) of petroleum impacted soil was removed as non-hazardous and was transported to the Otay Landfill in Chula Vista. A total of 9 tons (approximately 6 cubic yards) of the soil was classified as hazardous and was transported to US Ecology Nevada in Beatty, Nevada. During the excavation process, two (2) unknown underground storage tanks (USTs) were discovered (a 300-gallon and a 100-gallon UST). There was no evidence that either of the tanks has leaked. The 300-gallon tank could not be properly cleaned of sludge so it was transported as a California hazardous waste and properly dispose at South Yuma County Landfill in Yuma, Arizona. The remaining petroleum soil impacts are primarily located adjacent to the new parking structure. South of the structure, soil impacts extend from the near surface to a depth of 28 to 33 feet. These impacts extend to the south boundary of the Project Area. Soil impacts also extend to the east of the southern portion of the structure at a depth of 20 to 28 feet and likely dissipate before reaching the boundary of the Project Area at Kettner Boulevard. It has been estimated by DEH the volume of petroleum impacted soil remaining in the Project Area to be approximately 9,800 cubic yards. Soil impacts remain to the west of the structure in the area of the Trolley Station Platform (County Station). These impacts were investigated and addressed in case H06030-002. Residual soil and groundwater impacts have been mitigated to levels that do not pose a risk to the users of the new parking structure. The Soil Management

COUNTY OF SAN DIEGO (Continued) **S103632279**

Plan and the Community Health and Safety Plan were property implemented minimizing potential impacts to the public and the proper management of both non-hazardous and hazards impacted soil.

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 03/09/2004
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State Contractor/Grantee

FINDS:

Registry ID: 110002878253

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002764036

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002683588

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site History:	On April 4, 2006, DEH received an environmental assessment report in conjunction with an application to the Voluntary Assistance Program (H32329-001) for oversight of redevelopment of the site. Redevelopment includes construction of a 28-story residential tower, townhouse buildings for residential and commercial use, and a 4-story underground parking garage. The report summarized the results of numerous investigations completed at the site from 1991 through 2006. Historical uses of the site include a gasoline station that was previously located in the southwest corner of the site. Fire department records indicated that five underground storage tanks (USTs) were installed in the southwest corner of the site in 1935 and were removed in 1994, and that an additional UST was located in the southeast portion of the site and was also removed in 1994. DEH records indicate that there was one UST closed in place and one UST removed from the southwest corner of the site in 1994, not five. Soil sampling completed in 1999, 2002, 2003, and 2006 identified total petroleum hydrocarbons (TPH) from gasoline and diesel at depths of 9.5 to 16 feet below ground surface (bgs) at maximum concentrations of 3,700 and 8,400 milligrams per kilogram (mg/kg), respectively. Soil sampling revealed two areas of petroleum-impacted soil at the site, in the location of the former gasoline station in the southwest portion of the site, and in the location of the former UST in the southeast portion of the site. Groundwater sampling completed in 1999 identified limited petroleum-impacted groundwater in the southwest portion of the site. Based upon these results, DEH opened Unauthorized Release Case H32329-002. Remediation consisted of removal of petroleum-impacted soil as part of the excavation for the underground parking garage. During excavation activities, two groundwater monitoring wells remaining at the site from the investigation completed in 1999 were removed. In addition, the UST in the southeast portion of the site that had reportedly been removed was discovered crushed and abandoned in place. This UST was removed under DEH permit on January 1, 2007. From November 2006 through January 2007, approximately 3,906 cubic yards of petroleum-impacted

CATELLUS (Continued) **S108086983**

soil was removed from the site. Dewatering of the site was necessary during excavation, and a total of approximately 119,162,200 gallons of groundwater was removed, treated on site, and disposed of to the sanitary sewer. Groundwater influent and effluent samples were collected periodically and analyzed for TPH from gasoline and diesel and benzene, which were not detected. The final depth of the excavation was 37 to 46 feet bgs. Approximately 72 cubic yards of petroleum-impacted soil remains at the southern end of the west wall of the excavation, adjacent to Pacific Highway. The consultant performed a risk assessment to determine whether the residual petroleum-impacted soil on site represents a risk to public health. The consultant compared the highest residual concentrations of volatile organic compounds to their respective USEPA Preliminary Remediation Goals. The estimated cancer risk was less than the DEH threshold of one in one million for both residential and commercial site use. The consultant states that health risk due to vapor intrusion was not considered as the residual petroleum-impacted soil is outside the thick wall of the unattended parking garage. Based upon the results of confirmation sampling and the human health risk assessment, the consultant recommended that the case be closed. On October 11, 2013, DEH notified the Bayside Owners Association of the impending closure of the case and requested that the notice be distributed to the property owners for comment. DEH did not receive any comments regarding the proposed case closure. On March 7, 2014, DEH notified the owners and tenants of the adjacent property to the south and the City of San Diego Development Servicesand Public Utilities Departments of the impending closure of the case and specified a 60-day comment period. DEH received a letter dated April 1, 2014 from the City of San Diego Public Utilities Department regarding closure of the case. The letter requested that no activity be performed and/or approved on the subject site that would jeopardize the Citys ability to develop groundwater resources near the subject site. Activities at the site have included removal of petroleum-impacted soil and treatment of extracted groundwater. As a result, minimal petroleum-impacted soil remains to impact groundwater resources at the site. DEH concurs with the consultant that closure of the case is appropriate.

Potential Media Affected: Soil
Potential Contaminants of Concern: Lead
Site History: On April 4, 2006, DEH received an application to the Voluntary Assistance Program (VAP) for oversight of redevelopment of the site. Redevelopment includes construction of a 28-story residential tower, townhouse buildings for residential and commercial use, and a 4-story underground parking garage. In conjunction with the VAP application, DEH received an environmental assessment report that summarized the results of numerous investigations completed at the site from 1991 through 2006. Soil sampling completed in 1999 and 2006 identified soil impacted with metals, particularly lead, at depths of up to two feet below ground surface (bgs). Lead-impacted soil was identified in two areas in the southern portion of the site, the eastern side and the southwestern corner. The speculated source of the lead-impacted soil is the railroad yard to the east of the site. Remediation consisted of removal of shallow, lead-impacted soil as part of the excavation for the underground parking garage. In November 2006, approximately 1,058 cubic yards of lead-impacted soil was removed from the site. The results of sampling of the lead-impacted soil resulted in approximately 400 cubic yards being disposed of as California hazardous waste. Results of confirmation sampling in the excavation at depths of 17 and 24 feet bgs revealed an average lead concentration of 3.01 milligrams per kilogram (mg/kg), with a maximum concentration of 4.73 mg/kg. The consultant states that all lead-contaminated soil was removed as part of the excavation. The final depth of the excavation was 37 to 46 feet bgs. In addition to the excavation for the underground parking garage, excavation from one to two feet bgs was necessary to the south in the vacated A Street right-of-way for construction of a circular entrance driveway. In September 2007, approximately 350 cubic yards of lead-impacted soil, classified as California hazardous waste, was removed from this area. Results of sixteen confirmation samples at depths of 6 to 40

CATELLUS (Continued) **S108086983**

feet bgs revealed an average lead concentration of 32.2 mg/kg, with a maximum concentration of 50.1 mg/kg. The consultant calculated the cumulative hazard quotient for all detected metals, which was less than the DEH threshold of one. The consultant concludes that residual metals concentrations in the vacated A Street right-of-way do not present a significant human health risk. Dewatering of the site was necessary during excavation, and a total of approximately 119,162,200 gallons of groundwater was removed, treated on site, and disposed of to the sanitary sewer. Based upon the results of confirmation sampling and the human health risk assessment, the consultant recommended that the case be closed. DEH concurs with the consultant that closure of the case is appropriate.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Diesel
Site History: The Site is approximately one acre in size at the northeast corner of Pacific Highway and West Ash Street in San Diego and is the Site of a former Chevron Gasoline Station which had a release (case H12946-001) that was closed in 1996. On April 27, 2006, UST 1 (30,000 gallons) was discovered during the excavation of clean and contaminated soil to construct three buildings, including three levels of below grade parking, outside of the footprint of the former Chevron station building. Following the discovery of the UST, approximately 4,000 gallons of product were removed from the tank and disposed under manifest at an offsite facility. On May 25, 2006, UST 1 was removed from the Site. During the UST removal inspection, product was observed seeping from the tank into the surrounding soil, and LOP Case H12946-003 was opened. Subsequently, UST 2 (250 gallons) was discovered on the Site and, on June 27, 2006, was removed. Soil samples were collected and displayed contamination. No new LOP case was opened for the removal of UST 2. As part of the project, a total of 2,089,800 cubic feet of soil, including 8,480 cubic yards of TPH-impacted soil, were removed from the Site. The vertical and lateral extent of TPH-impacted soils associated with the release has been defined. Confirmation samples collected indicate that no concentrations of TPH above their respective laboratory reporting limits were identified deeper than 19.5 feet bgs. Groundwater does not appear to have been impacted. The consultant states that the release does not pose a significant threat to residents or the environment and the case should be closed. Please note that the overall project, including the characterization and removal of lead-impacted soil, will be addressed in the closure summary for Voluntary Assistance Case H12946-002.

of a former Chevron Gasoline Station which had a release of petroleum hydrocarbons (case H12946-001) that was closed in 1996. In September 2003, Voluntary Assistance Program (VAP) Case H12946-002 was opened. The project objective was to excavate and dispose of clean, petroleum-contaminated soil and lead-contaminated soil to construct three buildings, including three levels of below grade parking. During excavation activities, three USTs were discovered. The removal of USTs 1 and 2 and petroleum-contaminated soil associated with the two USTs is covered under the closure summary for case H12946-003. On October 24, 2006, during excavation of the TPH-impacted soil associated with the previous Chevron retail gas station, UST 3 was discovered. The UST was removed on November 7, 2006. Two soil samples collected contained no detectable contaminants. From May 2006 to September 2006, lead-impacted soil was excavated and removed from the Site. In November 2006, a vertical concrete pit was discovered with burn ash impacted soil. A ten-inch pipe was discovered with free product 21 feet below ground surface (bgs). Soil was removed and the pipe was grouted in place. In January 2007, TPH-impacted soil was excavated from the northeast portion of the Site from previously undetected sources. A total of 77,400 cubic yards of soil, including 9,100 cubic yards of lead impacted soil, 8,480 cubic yards of TPH impacted soil, and 120 cubic yards of burn ash, were removed from the Site. According to the consultant, although TPH and lead contamination may remain adjacent to the Site, the remaining contamination does not pose a significant threat to residents or the environment and both case should be closed. DEH concurs with this conclusion.

Site History:	Comments: Atmosphere is a low-income, multi-family residential apartment development planned for the city block bounded by Ash and Beech Streets, and 4th and 5th Avenues in the Centre City area of downtown San Diego (the Site). Prior to redevelopment activities, the Site consisted of one law office building at the address of 1434 5th Avenue and the California Stamp Company at the address of 1492-1494 5th Avenue. The remaining three parcels (533-451-02, -10, and -16) were excavated and shored for three levels of subterranean parking in 2004 by a previous developer and then subsequently filled back in by the City of San Diego in 2010. The management of impacted and non-impacted soil that was excavated from these three parcels for the subterranean parking in 2004 was completed without County oversight and no documentation has been presented to DEH. Development plans for the Site consist of a high-rise tower over a multi-level parking garage. The 12-story tower parallels 4th Avenue and 5th Avenue and includes 205 low income apartments, 51 supportive housing units for individuals with special needs, an onsite learning center for workforce development training, and retail space on the ground floor. Up to three levels of subterranean parking will occupy the entire site beneath the residential tower. The maximum depth of the excavation for the parking garage is 30 feet. Excavation operations at the Site began with the hazardous building materials abatement and

ATMOSPHERE (Continued) **S118504808**

demolition of the existing Law office building (1434 5th Avenue) and California Stamp Company building (1492-1494 5th Avenue). The remedial excavation activities conducted at the Site encompassed the footprints of the former buildings extending laterally to the limits of the previous shoring installed at the Site. Upon confirmation of the removal of lead impacted soil at the Site, the remaining on-site soil was exported as Tier 1 inert waste under the Regional Water Quality Control Board, San Diego Region's (SDRWQCB) Conditional Waiver Number 10 (R9-2014-0041). Based on the findings and conclusions of the Phase I ESA, vapor encroachment from historical automotive repair and gas stations in the Site's vicinity was identified as a potential recognized environmental condition (REC) for the Site. On February 27, 2015, soil vapor samples were collected at the Site. The soil vapor sampling depths were selected based on the dimensions of the proposed structure with three levels of subgrade parking. A total of five soil vapor probes (SGP-1 through SGP-5) were advanced at the Site with a truck-mounted direct push rig. During boring advancement, soil samples were collected at approximately 1 foot below ground surface (bgs), and at 5 foot intervals thereafter (i.e. 5 feet, 10 feet, etc.) to the maximum depth explored. An obstruction was encountered in boring SGP-1 at 14 feet bgs, and further excavation was not possible. Therefore, only one soil vapor probe was set at the SGP-1 location at a depth of 10 feet bgs. The remaining soil vapor probes (SGP-2 through SGP-5) were constructed as dual-nested soil vapor wells with probes installed at 10 feet and 30 feet bgs. Using the DEH Vapor Risk Assessment Model, the indoor vapor intrusion risk was calculated. The risk was calculated considering exposure to an adult resident in the proposed below grade parking garage under a residential vapor risk exposure scenario. The total cumulative cancer risk was calculated to be 6.54E-07, which is less than the DEH criterion of 1.0E-06 (or excess lifetime cancer risk of 1 in a 1,000,000 population). Hence, the calculated cumulative carcinogenic risk from potential indoor vapor intrusion is within the acceptable range. Impact to groundwater from historical land use has not been assessed or suspected based on Site history and results of previous subsurface soil investigations at the Site. No impacts to soils greater than 10 feet were identified in past investigations of the Site. Wakeland Housing and Development Corporation entered into the DEH Voluntary Assistance Program (VAP) (VAP Case DEH2016-LSAM-000358) as a result of lead and petroleum impacted soil discovered during the excavation for the below grade parking structure. The depth of the construction excavation envelope ranges between approximately 19 feet and 30 feet below grade. Prior to mass grading excavation activities at the Site, six exploratory trenches and four test pit excavations were advanced at the Site within the footprint of the former Site structures. The exploratory trenches and test pit excavations were advanced to approximately 1 foot below the native soil - fill contact. Based on the soil characterization results, it was determined that all of the soils from beneath the former Site buildings would need to be disposed of as California (non-RCRA) hazardous waste at South Yuma County Landfill in Yuma, Arizona. Lead impacted soil with concentrations above 15 mg/kg (Tier 1 Soil Screening Level) was detected at depths of up to 15.5 feet below the ground surface in the footprint of the former on-Site structures. Final confirmation soil samples were collected from the excavated areas at a ratio of at least one sample for every approximately 625 square feet (one sample per 25-foot x

ATMOSPHERE (Continued) **S118504808**

25-foot grid). Areas with lead concentrations detected above 15 mg/kg were over-excavated and resampled until Tier 1 Soil Screening Levels (SSLs) were met. Mitigation of the lead impacted soil was considered to be complete once all confirmation soil samples exposed on the surface of the excavated areas exhibited lead concentrations of less than 15 mg/kg with no detectable concentrations of other contaminants. Onsite sidewall samples were collected at approximate 25-foot lateral intervals along the sidewalls of the excavation. One sidewall sample was collected at each location from the mid-point of each excavated area. A total of 5,117.87 tons of California (non-RCRA) hazardous soil waste containing lead, PAH, and TPH-impacted soils were removed from the Site under proper manifesting protocol to South Yuma County Landfill in Yuma, Arizona. The remaining clean soil at the Site was removed during the course of the project under the Regional Water Quality Control Board - San Diego Region's (SDRWQCB) Conditional Waivers of Waste Discharge Requirements for Low Threat Discharges in the San Diego Region (Order No. R9-2014-0041, Waiver No. 10). The estimated 25,214 cubic yards of clean soil was tracked by the truckload (i.e. estimated cubic yardage) and was delivered to various import sites in San Diego County as inert waste. All of the lead and petroleum impacted on-Site soils from beneath the former building footprints at the Site were disposed of offsite as California (non-RCRA) hazardous waste. Based on the Site remedial work and the successful removal of elevated lead- and petroleum-impacted soils, it was concluded that the Site is protective of human health and no further action is required for the case. DEH concurs with the conclusion to close VAP Case DEH2016-LSAM-000358.

Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H23307-002
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Benzene, Diesel, Gasoline
Site History:	The site was initially investigated under a 1990 complaint (case #H23307-001) after petroleum hydrocarbons were detected in on-site soil and groundwater samples collected for an investigation of an adjacent property. Historically, a service station operated on the site from approximately 1940 to 1970. After 1970, the site was redeveloped for commercial uses (car rental business and restaurants). In 2009, sampling results received in a 60-day drilling report indicated a potential petroleum hydrocarbon release on the site. In 2010, DEH closed the complaint case and opened unauthorized release case #H23307-002 under the Local Oversight Program (LOP). Voluntary Assistance Program (VAP) case #H23307-003 was opened in 2011 to facilitate DEH oversight of site remediation activities prior to construction of the fire station. Six underground storage tanks (USTs) were reported to have been present on the site. A City of San Diego Fire Prevention Bureau permit was issued in 1962 for the removal of two 1,000-gallon USTs, one 2,000-gallon UST, and one 4,000-gallon UST, along with the installation of two 6,000-gallon USTs. In 1969, a permit was issued for the removal of the two 6,000-gallon tanks. Documentation confirming the UST removals could not be located; however, no USTs were encountered during extensive soil excavation conducted in 2016. Site assessment activities were conducted in 1990-1993 and 2005. In 1990, eight soil borings were advanced, and four of them were converted to groundwater monitoring wells. A fifth monitoring well was installed offsite in 1991. In soil samples, the maximum reported concentrations of total petroleum hydrocarbons as gasoline (TPH-g), TPH as diesel (TPH-d), benzene, and lead were 8,200 milligrams per kilogram (mg/kg), 1,200 mg/kg, 5.4 mg/kg, and 48.6 mg/kg, respectively. In groundwater samples, the maximum concentrations of dissolved benzene, toluene, ethylbenzene, xylenes, and naphthalene were 550 micrograms per liter (a%g/l), 400 a%g/l, 830 a%g/l, 2,500 a%g/l, and 110 a%g/l, respectively. Methyl tertiary butyl ether (MTBE) was not detected in any soil or groundwater samples collected at the site, and no free product was observed. Groundwater beneath the site has no beneficial uses

BAYSIDE FIRE STATION (Continued) **S106062056**

designated in the San Diego Regional Water Quality Control Boards (RWQCB) Basin Plan, and is exempt from municipal use. Prior to consideration of the LOP case for closure, DEH requested resampling of the monitoring wells and completion of a human-health risk evaluation related to the future proposed use of the site as a fire station with a one-level subterranean basement/parking garage. To obtain updated data, the five monitoring wells were purged and sampled in September 2015. Benzene, ethylbenzene, and naphthalene were only detected in on-site well MW-4, with concentrations of 2.83 a%g/l, 18.9 a%g/l, and 15.2 a%g/l, respectively. Using the 2015 groundwater data, a vapor risk screening evaluation was performed. The results indicated there are no significant human-health risks from subsurface vapor intrusion. The cumulative estimated carcinogenic risk was one in ten million, an order of magnitude below the target risk threshold of one in one million. The hazard index was less than one. Based on the sampling and risk assessment results, DEH approved destruction of the five monitoring wells. The wells were destroyed in December 2015 in accordance with permit number DEH2015-LMWP-002059. A 60-day public review and comment period regarding DEHs Notification of Intent to Close Case was completed, and no comments were received. A decision was made to close the LOP case concurrently with the VAP case to ensure consistent documentation of the site conditions after lead and petroleum hydrocarbon-impacted soil was excavated and prior to construction of the fire station. Approximately 4,964 cubic yards (7,018 tons) of contaminated soil was excavated and transported offsite for proper disposal in 2016. Export of an additional 1,036 cubic yards of inert (non-contaminated) waste was completed in June 2017. Details of the site remediation and soil management activities are provided in the VAP case closure summary report.

Case Type:	Cleanup Program Site
Case Worker:	TS
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Soil
Potential Contaminants of Concern:	Lead, Total Petroleum Hydrocarbons (TPH)
Site History:	Voluntary Assistance Program (VAP) case #H23307-003 was opened in 2011 to facilitate DEH oversight of site remediation activities prior to construction of Fire Station No. 2 (Bayside). A service station operated on the site from approximately 1940 to 1970. The site was initially investigated under a 1990 complaint (case #H23307-001) after petroleum hydrocarbons were detected in on-site soil and groundwater samples collected for an investigation of an adjacent property. In 2010, DEH closed the complaint case and opened unauthorized release case #H23307-002 under the Local Oversight Program (LOP) to investigate potential on-site releases of petroleum hydrocarbons from former USTs and dispensers. The LOP case is being closed concurrently with this VAP case. Please refer to the LOP case closure summary report for additional site investigation details. Prior to consideration of the LOP case for closure, DEH requested resampling of the five groundwater monitoring wells and completion of a human-health risk evaluation related to the future proposed use of

BAYSIDE FIRE STATION (Continued) **S106062056**

the site as a fire station with a one-level subterranean basement/parking garage. To obtain updated data, the five monitoring wells were purged and sampled in September 2015. Only benzene, ethylbenzene, and naphthalene were detected in on-site well MW-4, with concentrations of 2.83 micrograms per liter (a%g/l), 18.9 a%g/l, and 15.2 a%g/l, respectively. Using the 2015 groundwater data, a vapor risk screening evaluation was performed. The results indicated there are no significant human-health risks from subsurface vapor intrusion. The cumulative estimated carcinogenic risk was one in ten million, an order of magnitude below the target risk threshold of one in one million. The hazard index was less than one. In addition, the project specifications included the installation of a passive vapor barrier system beneath the building slab and behind the four sidewalls of the subterranean area to suppress any potential volatile organic compound (VOC) vapors that might impact firefighters residing at the station. In September 2011, DEH approved a Remedial Action and Property Mitigation Plan (PMP) to conduct contaminated soil segregation and management activities during redevelopment of the property. Mass soil excavation activities were conducted at the site in 2016. Initially, lead-containing artificial fill (which was found not to contain petroleum hydrocarbons) was removed. Next, the underlying soil was excavated to depths ranging from approximately 14 to 19 feet below ground surface, and petroleum-impacted soil was segregated from non-impacted soil. Between August 2, 2016 and October 5, 2016, a total of 7,018 tons (approximately 4,964 cubic yards) of contaminated soil was transported to the Otay Landfill in Chula Vista, CA as follows: Non-hazardous petroleum hydrocarbon containing soil- 5,129.09 tons Non-hazardous lead containing soil- 1,888.91 tons An additional 1,036 cubic yards of inert (non-contaminated) waste was exported to a Hanson Aggregates facility in San Diego, CA under the San Diego Regional Water Quality Control Boards Conditional Waiver No. 10. All inert waste removal was completed by June 14, 2017. The consultant recommends No Further Action at the site based on the following: Confirmation soil sampling was conducted which showed there is no known lead-impacted soil remaining at the site. In addition, the residual petroleum hydrocarbon impacts at the bottom of the excavation are not considered to be of significant concern to human health or the environment. A passive vapor barrier system is specified for installation beneath the building slab and behind the four sidewalls of the subterranean area to prevent vapor intrusion. A 60-day public review and comment period was completed following notification of DEHs Intent to Close the Case. No comments were received.

SOUTHWESTERN DIVISION HEADQUARTERS (TANK 1220) (Continued) **S103625921**

Site History: IR Site 7 was used for rubble disposal from 1955 to 1965. IR Site 7 is located in the SPAWAR portion of NBPL. It is an undeveloped area west of Building A-34. The site consists of a north-facing slope that leads down to a canyon bottom. The slope is covered with dense brush. Currently, construction debris can be seen exposed at the surface of the site. It appears that the debris was dumped off the edge of the slope, and forms a thin wedge of decreasing thickness towards the bottom of the slope.

RB Case Number: Not reported
Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H39749-001
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Benzene, Gasoline
Site History: On April 26, 2010, DEH received a Phase I Environmental Site Assessment (ESA) report and Results of a Geophysical Survey and Subsurface Investigation report as part of an application for the Voluntary Assistance Program. The Phase I ESA stated that a gas station was on site from approximately 1953 through 1982, at which time the gas station was removed and the Jack in the Box restaurant was built. Due to the site history, the consultant recommended that a subsurface investigation be performed. Five borings were completed adjacent to the location of the former underground storage tanks (USTs), and soil samples collected from the borings showed total petroleum hydrocarbons from gasoline (TPHg) and benzene concentrations of up 880 milligrams per kilogram (mg/kg) and 5.6 mg/kg, respectively, at a depth of 10 feet below ground surface

JACK IN THE BOX, 1619 PACIFIC HWY, SD (Continued) **S110275501**

(bgs). Since the petroleum hydrocarbon contamination originated from a leaking UST, the case was transferred to the Local Oversight Program on August 24, 2010. The responsible party was informed that additional site assessment was required, and that the concentrations of petroleum contaminants indicated that an impact to shallow groundwater and potential human health risks from soil vapors were likely. Additional site assessment was completed in December 2010, including installation of four soil borings, a groundwater monitoring well, and six soil vapor probes. Three of the soil borings were installed to the south, west, and east of the location of the former USTs, adjacent to the south, west, and east property lines. TPHg was the only petroleum constituent detected at 0.74 mg/kg in the soil sample taken at 15 feet bgs from boring JB-8, located near the eastern property line. The fourth soil boring (JB-9) was installed to the north of the location of the former USTs, and soil samples from this boring contained TPHg up to 110 mg/kg, benzene up to 0.081 mg/kg, and di-isopropyl ether (DIPE) up to 0.076 mg/kg. Toluene, ethylbenzene, xylenes, and naphthalene were also detected in soil samples from JB-9. Groundwater monitoring well MW-1 was installed in the center of the former UST excavation, and a groundwater sample from this well contained benzene at 1,700 micrograms per liter (ug/L). TPHg, toluene, ethylbenzene, xylenes, and naphthalene were also detected in the groundwater sample. Soil vapor samples were obtained from six soil vapor probes installed at 5 feet bgs over a period of 29 days, and petroleum constituents were present in at least one soil vapor sampling event. The highest levels of benzene, ethylbenzene, and methyl-tert-butyl ether (MTBE) detected in the soil vapor samples were used to determine the cancer risk to the employees of the building on site using the SAM Vapor Risk Model. Site specific values for the ceiling height, size of the building, and air exchange rate were used in the model, as well as a slab attenuation factor of 0.001 due to the vapor barrier installed below the slab during the construction of the building. The calculated cancer risk using a commercial exposure scenario was less than one in one million for benzene, ethylbenzene, and MTBE. DEH determined that a slab attenuation factor of 0.001 was not acceptable and given the date that the building was constructed (1983); DEH would accept a slab attenuation factor of 0.01. Changing the slab attenuation factor from 0.001 to 0.01 resulted in a cancer risk of less than one in one million for benzene, ethylbenzene, and MTBE. The consultant concluded that none of the petroleum constituents detected in soil vapor samples would pose a human health risk to occupants of the building on site through possible vapor intrusion. Based upon the results of all soil sampling completed, the consultant concludes that the extent of petroleum-impacted soils on site has been fully characterized, and is localized to the vicinity of the former USTs and dispenser islands. The consultant further concludes that the contaminants detected in soil samples from boring JB-9 were from contact with contaminated groundwater. They also attribute the presence of DIPE in one of the soil samples from JB-9 to an off-site source, as the USTs were removed from the subject site in 1982, which the consultant states was prior to the use of fuel oxygenates. Since petroleum constituents were only detected in one of the soil samples taken at or below the water table to the south, west, and east of the former USTs, the consultant concludes that the lateral extent of petroleum-impacted groundwater is very limited and is only within the vicinity of the former USTs. The consultant concludes that it is

JACK IN THE BOX, 1619 PACIFIC HWY, SD (Continued) **S110275501**

unlikely that the remaining residual concentrations of petroleum constituents in soil and groundwater would pose a significant risk to the environment or human health. The consultant recommends no further action and requests that DEH consider the site a low-risk case and issue a no further action letter. DEH concurs with the consultants conclusions that the extent of petroleum-impacted soil on site has been characterized and is limited in extent, and that soil vapors from petroleum constituents do not pose a health risk to occupants of the building on site. Although the extent of petroleum-impacted groundwater has not been determined, groundwater under the site is not considered beneficial and thus DEH concurs that the remaining concentrations of petroleum constituents in groundwater do not pose a significant risk to the environment or human health. DEH concurs with the consultants recommendation to close the case.

Environmental Interest/Information System
CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or

STATION B (Continued) **1000413651**

nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect:	Soil
Potential Contaminants of Concern:	Gasoline
Site History:	This case was opened following the removal of 5 underground storage tanks(USTs), dispensers and associated piping from the site on October 11, 1999. Stained and odorous soil was noted in the tank excavations. Total petroleum hydrocarbons as gasoline (5,910 mg/kg) as diesel fuel (8,540 mg/kg) and as oil (15,200 mg/kg) as well as benzene (32.2 mg/kg) and other gasoline related compounds were detected in soil samples. A site assessment was conducted in 2001 which consisted of the collection of soil samples from 16 direct-push borings that were drilled to depths of 10 to 25 feet below ground surface. Groundwater was not encountered in any of the borings. Hydrocarbon impacted soil was detected beneath dispensers no. 2 & 4, and in the vicinity of the former southern UST cluster. A work plan for additional assessment was submitted and approved with conditions by the DEH in March 2002. This work has not been conducted. The property owner was under court order to restore the property in 2002 and then experienced financial difficulties. In November 2011, sixteen borings and two monitoring wells were installed at the site. Soil and groundwater samples were collected and analyzed. Groundwater is present at approximately 112 feet below ground surface. TPHd was detected a maximum of 120 ug/l and benzene at 12 ug/l in the initial round of groundwater samples.

Description:	Caller states substance released from a sewer main due to San Diego Gas and electric rupturing the line and filling the hole with slurry. Caller states substance released to a planter box and a storm drain. Caller states release started 12/08/11. Caller states samples were taken and results came back on 12/12/11 and remedial actions were begun at that time. Caller states release is ongoing but substance is being contained using a vacuum truck. Caller states a contractor is enroute.

METRO VOLKSWAGON AUDI (Continued) **1000366430**

Potential Contaminants of Concern: Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), MTBE / TBA / Other Fuel Oxygenates, Gasoline

Site History: A property located in the Little Italy area of metropolitan San Diego is slated for redevelopment as a mixed-use building, including five stories of residential units, ground floor parking and retail space, and a two-level, subterranean, parking garage. Existing structures and pavement at the 1.31-acre property, which occupies an entire city block, will be demolished prior to the proposed redevelopment. These improvements were originally constructed in the late 1950s and early 1960s to accommodate an automobile dealership and repair facilities. Prior to 1957, the property had been in use as a municipal yard and storage area by the City of San Diego. A DEH inspector was present for the removal of two underground storage tanks (USTs) at the property on December 30, 1988. A 1,000-gallon UST that had contained gasoline and a 550-gallon waste oil tank were removed. No visual or olfactory evidence of an unauthorized release was noted in the UST closure report. A second 550-gallon waste oil UST was removed from the property on June 20, 1989. Two soil samples were collected from the base of the UST excavation. Total Recoverable Petroleum Hydrocarbons (TRPH) were detected in the samples at a maximum concentration of 90 milligrams per kilogram (mg/kg). No further action was required by DEH following the UST removal. Environmental site assessments (ESAs) were performed at the property in 2004 and 2010 in anticipation of proposed redevelopment. The November 2004 Phase II investigation included the collection of soil samples from a 55-foot-long trench and the advancement of three borings. Soil and grab groundwater samples were collected from the borings, which were advanced to a depth of 51.5 feet below ground surface (bgs). One of the borings (B-1), which was located near the former UST excavation in the southwest portion of the site, was later converted to a groundwater monitoring well. Total Petroleum Hydrocarbons (TPH) as gasoline or diesel were not detected in the soil and grab groundwater samples collected from the borings. However, volatile organic compounds (VOCs) were detected in the three groundwater grab samples. A valid groundwater sample was not collected from the B-1 monitoring well until September 2006. Analytical results indicated the detection of TPH as gasoline and as diesel, both at concentrations of 0.5 milligrams per liter [mg/l]. The VOCs benzene and tetrachloroethylene (PCE) were detected at concentrations of 34 and 17 micrograms per liter (a%g/l), respectively. A second Phase II ESA was performed at the site in November 2010 in association with the pending sale of the property to a new potential developer. Three borings were advanced during the investigation and 23 subsurface soil samples were collected. TPH and VOCs were not detected in the soil samples. Groundwater grab samples were collected from each boring and confirmed that petroleum hydrocarbons and PCE were chemicals of concern for the site. A groundwater sample was also collected from Monitoring Well B-1. Analytical results for the well sample indicated the detection of benzene and PCE at maximum concentrations of 5 and 5.6 a%g/l, respectively. A limited human health risk assessment was initially performed for the site using the groundwater analytical results obtained in September 2006. The assessment was based on the potential benzene soil vapor concentration calculated using the DEH soil vapor risk model. The calculated non-carcinogenic and carcinogenic risks were several orders of magnitude less than human health risk thresholds. The soil vapor health risk was re-calculated in 2011 using the November 2010 groundwater analytical data to

METRO VOLKSWAGON AUDI (Continued) **1000366430**

estimate the cumulative risks from benzene and the other detected VOCs that had cancer slope factors. The results confirmed the 2006 finding that soil vapor risks were below human health risk thresholds. Groundwater underlying the site has no beneficial uses and the hydrologic area is excepted from municipal use. Although low concentrations of gasoline, VOCs, and fuel oxygenates remain in groundwater, human health risk calculations are significantly below risk thresholds. Soil beneath the site is minimally impacted; TPH was not detected in soils samples and the only VOCs detected in soil were acetone and toluene. Based on these site assessment findings, the consultant recommends no further action at the site. DEH concurs with this recommendation and will proceed with case closure.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency: SAN DIEGO COUNTY LOP
File Location: Local Agency
Local Case Number: H36989-001
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: Two small diesel and waste oil tanks were discovered and removed under permit. Site assement found no impact to groundwater and only a limited amount of contaminated soil. Since that time, the site has been redeveloped into a multi-story parking structure. Any contaminated soil remaining on the site is now covered with concrete.

Case Type:	Cleanup Program Site
Case Worker:	EM
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Not reported
Site History:	This VAP case was opened to evaluate any subsurface contamination for this site for redevelopment of the site into a mixed-use eight-story structure with three levels of underground parking. A Limited Site Investigation, submitted on November 2014 discussed soil borings taken at various locations and noted hydrocarbon soil impacts in several areas. In September 2016, Leighton submitted an Additional Environmental site assessment with 12 exploratory test pits. Based on these two reports, lead and Total Petroleum Hydrocarbons (TPH) were identified as the main Contaminants of Concern (CoC) for site. A September 2016 Property Mitigation Plan (PMP) and Community Health & Safety Plan (CHSP) were submitted and approved. A February 2018 Property Closure Report (PCR) discussed the excavation of the property which occurred from March to July 2017. During this time, approximately 36,027 tons of soil was excavated, of which 7,382 tons were lead and / TPH-impacted and were disposed of at appropriate locations. The other 28,645 tons were considered inert and reused per RWQCB Waiver, Reference #834313. Dewatering occurred resulting in a total of 31,992,200 gallons of water was discharged to a stormdrain leading to San Diego Bay (NPDES Permit R9-2015-2013 CAG-919003). All Volatile Organic Compounds (VOCs) from confirmation samples were Non Detect (ND). The highest remaining TPH and lead were 3,900 mg/kg and 325 mg/kg, respectively. Both of these samples were taken on the southern perimeter (property line) of the site at depth. The consultant concludes that based on the results of this PCR, a complete exposure pathway from residual COCs to receptors at the Site does not appear likely as the COC-impacted soil remaining will be covered by the parking garage or other hardscape features and the subsurface conditions at the Site do not pose a risk to human health for the future users of the site. In addition, the consultant states that there is a low likelihood that the known releases of petroleum hydrocarbons or other COCs would pose a threat to the non-beneficial uses of water resources at the site.

FINDS:

Registry ID: 110002897866

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Potential Contaminants of Concern:	Not reported
Site History:	This case was opened in order for DEH to review historical environmental assessment reports, a property mitigation plan and a property closure report for the management of soils during mass excavation for the redevelopment of the site into a three story medical building with below grade parking. The site was vacant or used as a parking lot from 1950 until the proposed redevelopment in 2011. From the 1800s to 1949 the site was used as a series of hotels (Florence Hotel, Hotel Robinson, and Hotel Casa Loma). Burn ash, lead bearing soil, three cisterns and a former below grade boiler room were identified in prior investigations. A Phase I was reviewed by DEH and a Phase II Report and Property Mitigation Plan, Property Closure Report (PCR) and PCR Addendum were submitted for this project. The plan proposed mass excavation, segregation and disposal of contaminated and non-contaminated soil to depths ranging from approximately 15 to 32 feet below ground surface. Prior to excavation, a Phase II soil investigation was completed to evaluate the extent of contaminated soils. Based on the presence of burn ash, lead-bearing soils, cisterns and a boiler room which was found to be associated with fuel lines, soil samples were collected and analyzed for petroleum hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), metals and polychlorinated biphenyls (PCBs). Twenty-five potholes were excavated and soil samples were collected from the fill and soil at the site. Several of these samples were used as a priori confirmation samples. Additional soil samples and confirmation samples were collected during the course of the excavation activities which occurred during April through July 2011 and in February through July 2012. PCBs were not detected in any of the soil samples analyzed. Where encountered, petroleum hydrocarbons and PAHs impacted soils were excavated to non-detect concentrations (<0.010 or <0.050 mg/kg). Petroleum hydrocarbons were encountered associated with the boiler room and cisterns 1 and 2. Lead and other metals were detected at varying concentrations. Soil samples with high lead concentrations were submitted for the toxic characteristic leaching procedure (TCLP) and soluble threshold limit concentration (STLC) analyses. Hazardous levels of lead were encountered in fill soil at the northwest corner of the property. Several soil samples were also analyzed by STLC for barium, chromium, copper, mercury and zinc. A total of approximately 9,941 tons of metals and burn ash contaminated soil/fill, (California hazardous waste) was excavated from the northwest corner and northern portion of the site and disposed at the Copper Mountain Landfill. Approximately 2,545.94 tons of lead bearing non-hazardous soil were excavated and disposed at the Otay Landfill. A total of approximately 21,943 cubic yards of inert soil was excavated and exported from the

SHARP REES-STEALY DOWNTOWN MEDICAL CENTE (Continued) **S110819453**

site for reuse at various locations throughout San Diego County under the Regional Water Quality Control Boards Conditional Waiver No. 8. In July 2012, approximately 6 cubic yards of soil cuttings from borings for the canopy footings which contained lead at a maximum concentration of 122 mg/kg, were buried onsite with DEH approval. This soil was placed adjacent to the parking garage, beneath the driveway area at a depth of five feet below grade. The consultant estimated that the soil is placed at least 40 feet above the groundwater table. Groundwater in this area is designated as non-beneficial use. The consultant concluded that the known releases of hazardous substances have been mitigated and the remaining soils do not pose a threat to human health or the environment since any remaining impacted material will be covered by the parking garage or other building features. There is a low likelihood that releases of petroleum hydrocarbons or other chemicals of concern from the site have impacted groundwater. The consultant requested DEH concurrence for these conclusions and with the assessment and mitigation activities for the site. DEH concurs with the assessment and mitigation activities and agrees that no further action is required at this time.

Site History:	The Phase I Environmental Site Assessment, dated May 16, 2016, and the Phase II Environmental Site Assessment, dated May 17, 2016, were prepared by Advantage Environmental Consultants, LLC (AEC). According to the Voluntary Assistance Program (VAP) application, excavation for an underground garage referenced in the reports is no longer planned. DEH was requested to review the reports and make a determination regarding whether no further action is appropriate based on retail use of the property. Current plans are to remodel/renovate the current commercial building into a retail establishment. The environmental assessments were conducted to evaluate subsurface soil and soil vapor conditions at the site. A gasoline station formerly occupied a western portion of the site. In addition, elevated lead concentrations have been reported in artificial/unauthorized fill present in the vicinity of the site. Soil samples were collected from eight borings advanced to 20 feet below ground surface (bgs). AEC reports that total petroleum hydrocarbons and volatile organic compounds (VOCs) were not detected in any of the soil samples. Detected lead concentrations in the soil samples (ranging from 0.877 milligrams per kilogram [mg/kg] to 160 mg/kg) did not exceed the human-health risk screening level of 320 mg/kg recognized by the State of California for lead at a commercial property. Soil vapor probes were installed in four of the eight borings. The soil vapor samples were collected at depths of 18 to 20 feet bgs in anticipation of building a subterranean garage. AEC reported that negligible concentrations of benzene, chloroform, and tetrachloroethene were detected in the samples. A human-health risk assessment was conducted by AEC to evaluate the potential risk of exposure to indoor vapors for future users of the site. The calculated cumulative excess carcinogenic risk was four-in-ten million (4E-07), which is lower than the acceptable risk threshold of one-in-one million (1E-06). The Hazard Index (HI) for non-carcinogenic risk was 0.008, which is lower than the acceptable HI risk threshold of 1.0. AEC concludes that no additional site assessment is required relative to future site use as a retail establishment. DEH concurs.

Registry ID: 110002654100

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Last Update:	2019-04-20T10:18:57.000
Inspection Date:	2019-02-08T11:22:24.000
Violation Code:	2030036 (TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. 6. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. 7. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. 8. Inspected within 30 days after a repair to the overfill prevention equipment. 9. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional

USN-NSC (Continued) **U001573315**

engineer. 10. Inspected by a certified UST service technician. 11. Maintain records of overfill prevention equipment inspection for 36 months. 23 CCR 2635(c)(1), 2635(d), 2637.2(a-c), 2665, 2712(b)(1)(G)

USN-NSC (Continued) **U001573315**

Site ID: 137564
Site Name: NBSD - Broadway Complex - FISC/Headquarters
Violation Date: 02-08-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 02/08/2019. Inspection Sequence ID:6094658;Tank ID:29859;Violation Description:(TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equip

Completed Info:
Completed Area Name: Sites With No Operable Unit

POINT LOMA NAVAL COMPLEX - FISC (Continued) **S101482006**

Completed Sub Area Name: STE19
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 01/19/1996
Comments: Not reported

Completed Area Name: Sites With No Operable Unit
Completed Sub Area Name: WKPL
Completed Document Type: Site Screening
Completed Date: 11/06/1991
Comments: Meeting was held in Long Beach to discuss stabilization plan One sample contained lead levels above TTLC. Navy believes the lead is from sand blasting the outside of above ground tanks. Tank bottom material had been spread over the area to pave the ground. This material contains high TPH.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/03/1987
Comments: TSD Permit issued 12/16/81. Hazardous Waste Facility Permit issued 03/13/86 (expires 03/31/91). Site Screening Done: Preliminary Assessment recommended based on lack of information about historical hazardous materials handling. Hazardous waste generated by naval activities. Stored temporarily at facility prior to trans- port to a permitted TSD facility.

RB Case Number:	9UT2795
Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H00678-002
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	2045 PACIFIC HIGHWAY, BODY BEAUTIFUL CARWASH [BODY BEAUTIFUL]: Four underground storage tanks (USTs) were removed from Body Beautiful Car Wash, located between Grape and Hawthorn Streets, on December 4, 1989. Railroad tracks adjoin eastern boundary of the property. The three 12,000-gallon capacity gasoline USTs and the 6,000-gallon capacity UST had been installed circa 1971. Heavy gasoline odors were noted and stained soil was observed in the excavation. The unauthorized release was addressed under existing DEH Case #H00678-002, which had been opened October 2, 1987, due to a failed tank precision test. Previous environmental investigation at the site was performed following the discovery of an unauthorized release on September 22, 1986. The release occurred at a joint between a product line and a dispenser, resulting in the opening of DEH Case #H00678-001. Approximately 3.5 cubic yards of soil impacted with petroleum hydrocarbons was excavated from beneath the dispenser. Three borings and a fourth background boring were drilled and sampled. Thirteen groundwater monitoring wells were installed at the site from 1989 to 1994. Free product was detected in four of the wells. Case #H00678-001 was administratively closed on May 19, 2008. Assessment and corrective action at the site continued under Case #H00678-002. The Body Beautiful site was incorporated into a commingled plume investigation involving four unauthorized release cases in the latter part of 1995. COMMINGLED PLUME: In the early

BODY BEAUTIFUL CARWASH PACIFIC HWY SAN DIEGO (Continued) **S100725407**

1990s, several downtown San Diego properties located in the 2-block area bounded by Hawthorn Street, Grape Street, Pacific Highway, and Kettner Boulevard were inspected by the County of San Diego for the presence of hazardous materials and leaking USTs. In March 1991, the County officially identified several property owners as Responsible Parties (RPs) for soil and groundwater contamination, primary due to unauthorized releases of petroleum hydrocarbons (i.e., #H03575-002, Fogerty Petroleum Transport [Fogerty]; #H15338-001, Benton Paint Company [Benton]; #H00678-002, Body Beautiful Carwash; and #H12116-003, Thrifty Car Rental [Thrifty]). The RPs undertook separate actions to characterize subsurface impacts beneath their respective properties. On October 18, 1993, the RPs filed suit against other current and previous property owners, alleging that their practices resulted in the subsurface contamination. The parties to the lawsuit (Fogerty versus Exxon et al. Trust Under Second Interim Order) formed an Implementation Committee to manage site assessment and corrective action activities. In the same timeframe, construction of a light rail transit (LRT) extension from the Little Italy district of downtown San Diego to Old Town was initiated by the former Metropolitan Transit Development Board [presently known as the Metropolitan Transit System (MTS)]. The extension traversed the 2-block area underlain by the commingled plume and was 23 feet below grade at its deepest point. A depressed (i.e., below-grade) section of the LRT was built in a right-of-away parallel to the railroad tracks from north of Ivy Street to south of Grape Street. Construction de-watering along the depressed section was performed from August 8, 1994 to May 2, 1995, and resulted in drawdown of the water table beneath the area. In late 1995, Alton Geoscience, Inc. (Alton), an environmental consultant, was hired by the Implementation Committee to characterize the commingled plume. Although monitoring wells had been previously installed at each site, additional wells were installed within and peripheral to the 2-block area. Alton interpreted the soil and groundwater data as indicating that 1) a smear zone had developed in the subsurface due to free product mobilization activated by both LRT construction de-watering and seasonal fluctuations in water levels, and 2) the free product was split into two areas located east and west of the railroad tracks, respectively. Alton submitted a Revised CAP for the commingled plume to DEH on November 19, 1998, which was approved. Chemicals of concern (COCs) for soil and groundwater were identified as benzene, toluene, ethylbenzene, xylenes, and methyl-tert-butyl ether (MTBE). The Revised CAP proposed using dual-phase extraction (simultaneous removal of vapor and groundwater in the same wells) to lower the water table below the smear zone in order to remove free product to the maximum extent practicable, to remediate soil to residual saturation concentrations, and to stabilize dissolved benzene and MTBE levels. High-vacuum soil vapor extraction was proposed to remediate the shallow vadose zone. TRC (formerly Alton) estimated that it would be necessary for the system to lower the water table to 8 feet below mean sea level to remediate free product trapped below the water table. Approximately 100 vapor extraction wells and related piping were installed for the remedial system prior to its initial operation in 2003. Active remediation on the east side of the LRT was performed from August 2003 through March 2007 by Terra Vac, Inc. (Terra Vac). Similarly, active remediation was performed between October 2004 and March 2007 on the west side of the LRT. Remedial operations terminated in April 2007 when Terra Vac shut down the

BODY BEAUTIFUL CARWASH PACIFIC HWY SAN DIEGO (Continued) **S100725407**

system and pulled out of the project. In October 2008, TRC recommended replacing the Terra Vac system. However, on February 17, 2009, DEH required that 1998 Revised CAP be updated to demonstrate that the potential for mobilization of free product was of an extent to warrant a new remedial system and that potential risk to human health and the environment justified its design and installation. On April 26, 2011, TRC submitted a Second Revised CAP for the commingled plume area. In order to provide an updated human health risk assessment, TRC collected soil vapor samples from nine wells during two sampling events in 2010. The wells were located adjacent to occupied commercial and residential structures overlying impacted soil and/or groundwater on both sides of the LRT. Cumulative carcinogenic risks calculated for the commercial adult and residential scenarios were below the de minimis value of 1 x 10-6. Non-carcinogenic risks were calculated to be below the threshold value of 1. The Second Revised CAP of 2011 and a subsequent final semi-annual groundwater report for the September 2011 event included summaries of groundwater monitoring and sampling data collected for approximately 50 groundwater monitoring wells, 4 piezometers, 104 vapor extraction wells, and 13 other wells that had been installed to characterize the commingled plume since the late 1980s. Free product was measured in eight of the 48 wells monitored during the event, with a maximum thickness of 2.67 feet. TRC concluded that the leading edge of the commingled plume had been stable since 1992. In the 2011 CAP, TRC again recommended replacement of the Terra Vac system. DEH did not concur with TRCs recommendation due to lack of risk and its cost relative to an alternative (natural attenuation) that was not considered in the 2011 CAP. CONCLUSION - 2045 PACIFIC HIGHWAY (BODY BEAUTIFUL): Free product was detected in nine of 35 wells monitored on the Body Beautiful site during the last groundwater monitoring and sampling event. Maximum benzene concentrations in groundwater remained elevated, but are stable or decreasing. MTBE concentrations exhibit decreasing trends in groundwater samples. Risk assessment indicated no human health threat from the COCs under a commercial scenario. Based on these findings, DEH has made a determination that no further action is necessary for the Body Beautiful site and the Fogerty, Benton, and Thrifty sites, each of which will be closed under the States Low-Threat Closure Policy.

Violation Date: 08-06-2019
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Inspection Sequence ID:6211266;Tank ID:15818,15819;Violation Description:(TCR 9a) Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of 5 gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container, tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. 23 CCR 2635(b), 2637.1(a-c), 2665(a-b), 2712(b)(1)(F); HSC 25284.2

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 08/06/2019. Inspection Sequence ID:6211266;Tank ID:15818,15819,15820,15821;Violation Description:(TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfil

Violation Date:	08-06-2019
Citation:	HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description:	"Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 08/06/2019. Inspection Sequence ID:6211266;Tank ID:15818,15819,15820,15821;Violation Description:(TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. . Waste name: VINYL CHLORIDE

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: K003
. Waste name: WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF MOLYBDATE ORANGE PIGMENTS.

SOLAR TURBINES INC (Continued) **1000154490**

. Waste code: K005
. Waste name: WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF CHROME GREEN PIGMENTS.

. Waste code: U151
. Waste name: MERCURY

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 3060

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 52

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 65536

Waste code: D008
Waste name: LEAD
Amount (Lbs): 3003

Corrective Action Summary:

Event date: 10/01/1980
Event: STABILIZATION/INTERIM MEASURES DECISION-PRIMARY MEAS IS SOURCE REMOVL &/OR TRT

Event date: 08/30/1986
Event: STABILIZATION CONSTRUCTION COMPLETED

Event date: 04/30/1991
Event: RFA COMPLETED

Event date: 04/30/1991
Event: RFA COMPLETED-ASSESSMENT WAS A PA-PLUS

Event date: 05/20/1991
Event: CA PRIORITIZATION-MEDIUM CA PRIORITY

Event date: 05/20/1991
Event: LEAD AGENCY DETERMINATION

Event date: 05/20/1991
Event: PA OR CERCLA INSPECTION

Event date: 11/08/1994
Event: STABILIZATION MEASURES EVALUATION-FACILITY IS AMENABLE TO STABILIZATION

Event date: 11/08/1994
Event: STABILIZATION MEASURES EVALUATION-FACILITY IS AMENABLE TO STABILIZATION

Event date: 11/14/1994
Event: CA PRIORITIZATION-MEDIUM CA PRIORITY

Event date: 01/01/1997
Event: INVESTIGATION IMPOSITION

Event date: 06/30/1997
Event: INVESTIGATION COMPLETE

Event date: 11/03/1997
Event: INVESTIGATION WORKPLAN APPROVED

SOLAR TURBINES INC (Continued) **1000154490**

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 123
. Waste name: Unspecified alkaline solution

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 172
. Waste name: Metal dust (see 121) and machining waste

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB's

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 461
. Waste name: Degreasing sludge

. Waste code: 491
. Waste name: Unspecified sludge waste

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 611
. Waste name: Contaminated soil from site clean-ups

SOLAR TURBINES INC (Continued) **1000154490**

. Waste code: 723
. Waste name: Liquids with chromium (VI) > 500 mg/l

. Waste code: 724
. Waste name: Liquids with lead > 500 mg/l

. Waste code: 726
. Waste name: Liquids with nickel > 134 mg/l

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D001

. Waste code: D011
. Waste name: SILVER

. Waste code: D018
. Waste name: BENZENE

. Waste code: D028
. Waste name: 1,2-DICHLOROETHANE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: D038
. Waste name: PYRIDINE

. Waste code: D040
. Waste name: TRICHLORETHYLENE

. Waste code: D043
. Waste name: VINYL CHLORIDE

SOLAR TURBINES INC (Continued) **1000154490**

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: K003
. Waste name: WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF MOLYBDATE ORANGE PIGMENTS.

. Waste code: K005
. Waste name: WASTEWATER TREATMENT SLUDGE FROM THE PRODUCTION OF CHROME GREEN PIGMENTS.

. Waste code: U151
. Waste name: MERCURY

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 3060

SOLAR TURBINES INC (Continued) **1000154490**

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 52

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 65536

Waste code: D008
Waste name: LEAD
Amount (Lbs): 3003

Waste code: D011
Waste name: SILVER
Amount (Lbs): 15

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 2387

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 1380

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 1380

Case Type:	Cleanup Program Site
Case Worker:	KK
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
File Location:	Local Agency
Potential Media Affected:	Soil
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Polychlorinated biphenyls (PCBs), Lead, Diesel, Waste Oil / Motor / Hydraulic / Lubricating
Site History:	The former Goodyear Auto Care was damaged in a fire. Soil sampling & analysis detected TPH and chlorinated solvents. The RP proposes excavation to remove impacted soil. The Department of Environmental Health, Site Assessment and Mitigation Program (SAM), reviewed the environmental investigation reports related to the above-referenced property, prepared by Geocon Consultants, Inc. The reports summarize site investigation activities performed at the above-referenced location and propose excavation of hydrocarbon- and chlorinated solvent-impacted soil. The Voluntary Assistance Program Application requested that SAM provide oversight and concurrence with proposed removal action. Prior to SAM approval of the excavation workplan, the property owner notified SAM that the proposed land use for the property was a paved grade level parking lot. After conducting research of the site and surrounding area, SAM determined and subsequently notified the property owner that implementation of the proposed excavation activities was not necessary for the proposed site use. Regardless, on May 25, 2010, SAM was notified that the excavation activities would continue at the site. The consultant subsequently provided a remediation report outlining excavation activities conducted at the site. SAM was instructed not to review or comment on the document and to provide regulatory case closure based on the proposed site use as a paved parking lot. As a result, SAM has no knowledge of the excavation activities conducted at the site or their effectiveness. Therefore, provided that the information presented to SAM was complete, accurate, and representative of existing site conditions, this agency concurs that the site investigation goals established for the subject site have been met. Please be advised that this letter does not relieve the responsible party of any liability under the California Health and Safety Code or the Porter Cologne Water Quality Control Act. If previously unidentified contamination is discovered which may affect public health, safety and/or water quality, additional site assessment and cleanup may be necessary. SAM understands that the proposed land use for the site is a paved grade level parking lot, which at this time is the only approved land use for the property. Changes to this land use will require reevaluation of the property to determine if the revised land use could result in a risk to public health.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 09/18/1996
Comments: A Preliminary Assessment was completed under U.S. EPA grant. No further assessment action is warranted by U.S. EPA. However, DTSC requires a Preliminary Endangerment Assessment due to heavy metals on the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/26/1995
Comments: Site was identified from a non-emergency release report dated August 1994. The San Diego Unified Port District, a prospective buyer, conducted a Phase I and Phase II assess- ments and found that the site is contaminated with copper, zinc, and lead. A PEA notification letter was sent to the Port.

Latitude:	32.7138187764328
Longitude:	-117.154264905091
Case Type:	Cleanup Program Site
Case Worker:	TS
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Soil
Potential Contaminants of Concern:	Lead, Total Petroleum Hydrocarbons (TPH)
Site History:	This VAP Case was opened in 2015 for DEH oversight of the handling and export of soil impacted with lead and petroleum hydrocarbons prior to redevelopment of the site as a 7-story mixed residential and commercial use building with two levels of underground parking. Based on a Phase I environmental site assessment (ESA), portions of the site have historically been used for automobile repair, commercial businesses, and paved parking. The primary source of the petroleum hydrocarbons and volatile organic compounds (VOCs) appears to be the previous automotive service activities. Possible sources of the lead contamination identified by the consultant include historical burning of trash (generating burn ash), lead-based paint, aerial deposition of automobile exhaust from the combustion of leaded gasoline, and the import of fill soils with lead contamination. A Phase II ESA was conducted at the site in September 2014. Two trenches were excavated to depths of 7 to 9 feet below ground surface (bgs), and thirteen borings were advanced to a maximum depth of 15 feet bgs. Soil sampling results indicated that the upper approximately 1 to 3 feet of soil across an estimated 19,000 square feet of the site was fill soil containing elevated concentrations of lead. The maximum lead concentration (4,750 milligrams per kilogram [mg/kg]) was detected in a soil sample collected at 5 feet bgs in the vicinity of a former cistern filled with trash and possible burn ash. Elevated concentrations of arsenic, cadmium, copper, mercury, and zinc were also detected in the soil sample. A maximum total petroleum hydrocarbons (TPH) concentration in the oil range (TPH-o) of 620 mg/kg was reported in a soil sample collected at 5 feet bgs in the immediate vicinity of a former in-ground hydraulic lift (Lift 1). Polychlorinated biphenyls (PCBs) were not detected in any soil samples. Additional areas of impacted soil were found during excavation activities at the site. Lead-bearing soil was identified in a second cistern discovered beneath the former auto repair garage. During the excavation of Lift 1, elevated concentrations of TPH as gasoline (TPH-g), TPH as diesel (TPH-d), TPH-o, and various VOCs were reported in a soil sample collected at 11 feet bgs. On September 2, 2016, petroleum hydrocarbon-bearing soil cuttings were generated during the installation of a shoring piling at the property line. The consultant concluded that the impacted soil associated with the drill cuttings is limited in extent and unlikely to result in a risk to human health or groundwater quality. DEH approved an August 2015 Soil Management Plan (SMP) for excavation monitoring, confirmation soil sampling, and handling of contaminated soil. A Community Health and Safety Plan for site activities was approved by DEH in October 2015. The SMP proposed that exported soil from the site that does not meet the Regional Water Quality Control Boards (RWQCB) Resolution No. R9-2014-0041 Conditional Waiver No. 10 (Waiver) criteria for inert waste soil would be segregated, characterized, and transported offsite to an appropriate licensed disposal or treatment facility.

F11 MIXED-USE (Continued) **S100178277**

Inert soil was defined in the SMP as not being impacted by elevated concentrations of metals (i.e., generally above Tier I Soil Screening Levels [SSLs]) or by detectable concentrations of TPH, VOCs, or PCBs. The consultant did not request a Waiver from the RWQCB. The excavation, segregation, and export of contaminated soil was primarily conducted between June 23, 2016 and July 25, 2016. Additional soil disposal was conducted in September 2016. Following the conclusion of excavation activities, confirmation soil samples were collected from the sidewalls and bottoms of the excavations to confirm that metals and petroleum-hydrocarbon-impacted soil was mitigated. Since areas of the site with elevated concentrations of metals other than lead also contained elevated lead concentrations, an assumption was made by the consultant that these areas would be mitigated by removing the lead-impacted soil. In the same manner, TPH was assumed to be an acceptable surrogate to indicate the removal of VOCs. Therefore, confirmation samples were only analyzed for lead and/or TPH. Three of the confirmation sidewall samples collected along the site boundary had elevated lead concentrations of 109 mg/kg to 236 mg/kg (above the cleanup goal of 27 mg/kg). However, the consultant states that since the soil represented by these samples is considered to be outside the limits of the excavation, is limited in extent, and will ultimately be covered by hardscape (including a cast-in-place concrete wall and/or concrete flatwork), there is a low likelihood of exposure pathways to the residual material. Lead concentrations in the remaining confirmation samples collected at the sides and bottoms of the excavations met site cleanup goals, and TPH was not detected in confirmation soil samples collected from residual soil along the sides and bottoms of the site excavations. A total of 4,702.44 tons of waste material excavated as part of the site mitigation efforts was disposed to three different facilities as follows: Approximately 3,559.33 tons of lead and petroleum hydrocarbon-impacted soil was transported as nonhazardous waste to the Otay Mesa Landfill in Chula Vista, CA. Approximately 178.75 tons of petroleum hydrocarbon-impacted soil was transported as nonhazardous waste to Soil Safe of California in Adelanto, CA. Approximately 964.36 tons of lead-impacted soil was transported as non-RCRA CA hazardous waste to the Copper Mountain Landfill in Wellton, AZ. In addition, an estimated 18,121 cubic yards (approximately 27,181 tons) of inert waste soil was exported from the site for unrestricted reuse in San Diego County. The consultant states that contaminated soil beneath the site was properly excavated, handled, transported, and disposed in accordance with the SMP. Based on the results of site assessments and the post-excavation confirmation soil sampling, the consultant recommends No Further Action for the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/19/2019

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Next Scheduled EDR Contact: 01/13/2020
Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/14/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

RESD STATE STREET
STATE ST
SAN DIEGO, CA 92101

TARGET PROPERTY COORDINATES

Latitude (North):	32.719352 - 32° 43' 9.67''
Longitude (West):	117.166044 - 117° 9' 57.76''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	484439.6
UTM Y (Meters):	3619997.0
Elevation:	54 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5622832 POINT LOMA, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

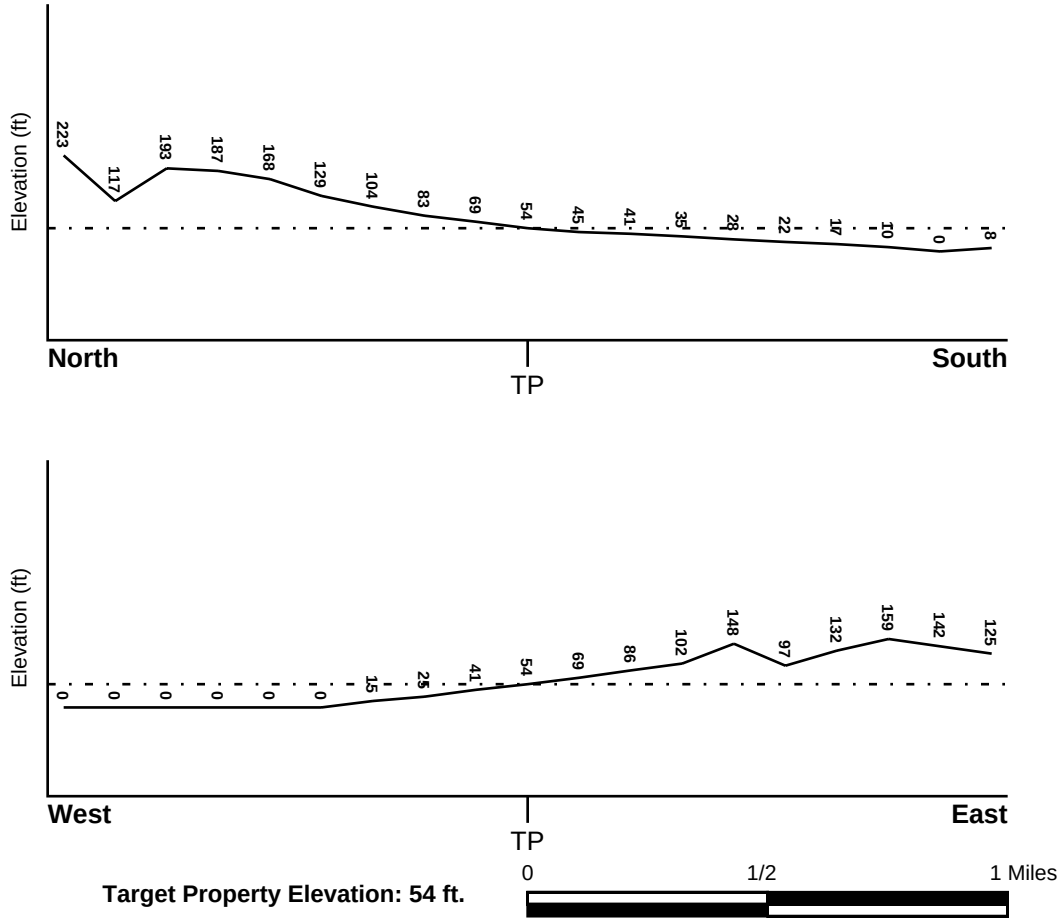
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 54 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06073C1885G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06073C1882G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
POINT LOMA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile SSE
Site Name:	Super Plating
Site EPA ID Number:	CAD983658485
Groundwater Flow Direction:	Southwest
Measured Depth to Water:	22 feet to 29 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifer(s) underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

VOC	volatile organic compound

1.0 INTRODUCTION

This report documents a Phase II investigation of the "State Street Property," a city block located southeast of the intersection of State and Ash Streets in San Diego, California (the site). Avocet Environmental, Inc. (Avocet) conducted the Phase II investigation on behalf of the California Department of General Services, Real Estate Services Division (RESD), which is considering leasing the property for low-income housing redevelopment. The investigation was conducted pursuant to the findings of a Phase I environmental site assessment (ESA), which documented the current condition of the site in the context of the use, storage, handling, and disposal of potentially hazardous substances that could have impacted the subsurface environment or that may pose other human health risks (Avocet, May 22, 2020). It should be noted that the subject Phase II investigation did not address asbestos-containing material (ACM) or lead-based paint and coatings (LBP), although these materials likely are present in the older structures and subsurface infrastructure at the site. The location of the site is shown in Figure 1, an aerial photograph of the site vicinity is presented in Figure 2, and the investigation locations are shown in Figure 3.

1.1 OVERVIEW

The 1.38-acre site encompasses a city block in downtown San Diego and is identified as Assessor's Parcel Number 533-411-10-00. The block is bound by West Ash Street to the north, Union Street to the east, West A Street to the south, and State Street to the west. The site currently features two buildings associated with the addresses 345 West Ash Street and 1301 State Street. The building at 345 West Ash Street is an approximately 10,000-square-foot single-story garage located in the northwest corner of the site and is currently used by RESD as a materials storage facility. The building at 1301 State Street is an approximately 14,000-square-foot two-story commercial building in the southwest corner of the site and is currently unoccupied. The remainder of the site consists of asphalt-paved parking areas that are divided in the central portion of the block. The western parking area, between the two buildings, has 30 stalls and the eastern parking area, which occupies the entire eastern half of the site, has a reported 115 stalls. Vehicular access to the lots is controlled by chain link and metal fences along the perimeters with an automated gate for access/egress from Union Street to the east. An additional, small, unfenced, paved parking area is present in the southwestern corner of the site (Avocet, May 22, 2020).

The site appears to have been developed for residential purposes prior to 1888 and remained as such through the early 1920s. From the late 1920s to the early 1960s, the site usage gradually changed from residential, to mixed residential and commercial, to solely commercial. By the mid-1960s, the site appears to be occupied primarily by commercial automotive repair businesses and parking garages/lots. By the late 1960s, the site appears to have attained its current configuration, with the garage and office building in the northwest and southwest corners, respectively, and the balance of the site being used for parking.

In its Phase I ESA report, Avocet identified five Recognized Environmental Conditions[1] (RECs) and three other environmental features[2] (OEFs) associated with the site (Avocet, May 22, 2021). The identified RECs and OEFs were as follows:

Condition/ Feature	Description
REC 1	Former Aircraft Parts Factory, Automotive Repair, Auto Greasing, Tire Service, and Badge Manufacturing
REC 2	Former Auto Repair Garage
REC 3	In-Ground Hydraulic Lifts
REC 4	Possible Remaining USTs
REC 5	Possible Remaining Oil/Water Separator
OEF 6	POL staining
OEF 7	ACMs and LBPs
OEF 8	Impacted Fill

In addition to the RECs and OEFs, the Phase I ESA report also concluded that the potential presence of vapor intrusion conditions (VICs) and/or vapor encroachment conditions (VECs) at the site could not be ruled out.

While onsite for the geophysical survey, the oil/water separator (REC 5) was located under the awning on the south side of the garage, and a "biased" boring targeting this feature was included in the Phase II investigation. Conversely, as discussed in Section 2.2, the area extending up to 40 feet from the south and east walls of the maintenance garage was surveyed using geophysical methods for former or existing underground storage tanks (USTs), with no evidence of a UST (REC 4) identified. Therefore, no biased boring(s) were drilled targeting USTs.

1.2 PHASE II APPROACH

Based on the findings of the Phase I ESA (Avocet, May 22, 2021), Avocet recommended a Phase II investigation to assess whether and to what extent the subsurface environment may have been impacted by the identified RECs and OEFs. The scope of work involved the collection and analysis of soil matrix and soil vapor samples at three "biased" and 17"unbiased" locations. The biased sampling locations targeted the identified RECs, specifically the two remaining in-ground hydraulic lifts and the oil/water separator, whereas the unbiased locations were distributed throughout accessible areas of the site, with no specific identified environmental conditions to provide spatial coverage. Specifically, Avocet collected and analyzed:

[1] The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.

[4] OEFs are environmental conditions that do not meet the ASTM definition of a REC, Controlled RECs (CRECs), or Historical RECs (HRECs), but which warrant mention in the context of divesting the subject site or a portion thereof for redevelopment.

- Soil matrix samples from two biased borings (SB-1 and SB-2) advanced to 15 feet below ground surface (bgs) to assess potential subsurface impacts associated with the in-ground hydraulic lifts (REC 3).

- Soil matrix and soil vapor samples from one biased boring (SG-18) advanced to 15 feet bgs and completed with nested soil vapor probes at 5 and 15 feet bgs to assess the potential for subsurface impacts associated with an oil/water separator (REC 5).

- Soil matrix and soil vapor samples from 17 unbiased borings (SG-1 through SG-17) advanced to 15 feet bgs and completed with nested soil vapor probes at 5 and 15 feet bgs to assess areas of the site with former commercial/industrial operations, but with no specific identified environmental conditions (RECs 1 and 2).

The biased soil samples collected at the two locations targeting the in-ground hydraulic lifts were analyzed for a combination of total petroleum hydrocarbons (TPH), metals, and polychlorinated biphenyls (PCBs). The biased soil samples collected at the location targeting the oil/water separator were analyzed for TPH and volatile organic compounds (VOCs). The unbiased soil samples taken at all other locations were analyzed for TPH and VOCs, in addition, a select few were analyzed for metals. All soil vapor samples were analyzed for VOCs and oxygen.

1.3 SCREENING LEVELS

Avocet compared the results of the soil matrix and soil vapor sample analyses to screening levels developed by the U.S. Environmental Protection Agency (EPA), the California Department of Toxic Substances Control (DTSC), and the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB). Where available, the generally more conservative "DTSC-modified Screening Levels" (DTSC-SLs; DTSC, June 2020) were preferentially used, with EPA "Regional Screening Levels" (RSLs; EPA, May 2021) used for those compounds for which DTSC-SLs are not available. The SFBRWQCB "Environmental Screening Levels" (ESLs; SFBRWQCB, July 2019) were used as screening levels for TPH in soil and VOCs in soil vapor. As naturally occurring arsenic is typically present in southern California soil at concentrations above DTSC-SLs and EPA RSLs, arsenic concentrations in soil were also compared to the background range of concentrations commonly present in southern California soil (Chernoff, et al., 2008) and DTSC's screening level for school sites (DTSC, June 6, 2005). As there are no EPA or DTSC screening levels for VOCs in soil vapor, Avocet assessed the potential for vapor intrusion into existing and future buildings using conservative default attenuation factors to estimate VOC concentrations in indoor air, which were then compared to SFBRWQCB ESLs, DTSC-SLs, and/or EPA RSLs.

1.4 REPORT ORGANIZATION

Including the introduction, this report is organized into four sections. Section 2.0 documents the Phase II investigation field and laboratory procedures and Section 3.0 presents the findings. Section 4.0 presents a general summary and conclusions.

Supporting information is contained in tables, figures, and six appendices, all of which follow the text of this report. Appendix A geophysical investigation report. Appendix B contains the the boring logs for the Phase II investication. Appendices c and d contain the laboratory reports for the soil matrix and soil vapor samples, respectively. Appendix e contains the laboratory report for investigation-derived waste (IDW), and Appendix F contains IDW disposal documentation.

2.0 FIELD AND LABORATORY PROCEDURES

This section documents field, laboratory, and related procedures followed during the Phase II investigation. The Phase II field work was conducted from November 15 through November 17, 2021. The investigation involved the collection and analysis of soil matrix samples from two borings advanced to 15 feet bgs and soil matrix and soil vapor samples from 18 borings advanced to depths of 15 feet bgs. Drilling services were provided by Strongarm Environmental, Inc. (Strongarm), a C-57 licensed driller based in Fullerton, California. The locations of the Phase II borings are shown in Figure 3.

2.1 HEALTH AND SAFETY

The Phase II investigation was conducted in accordance with a site-specific Health and Safety Plan (HASP). The HASP (Avocet, November 12, 2021) identifies the potential chemical and physical hazards that may be encountered at the facility, as well as the "generic" hazards associated with working in proximity to drilling and other mechanized equipment. It also specifies the measures to be taken to avoid or minimize these hazards. The identification of potential chemical hazards was based on the types of chemicals potentially present in the subsurface based on the operations known to have been conducted at and around the site. The identification of potential physical hazards was based primarily on the type(s) of investigation equipment expected to be used during the subsurface investigation, the potential for encountering and damaging subsurface or overhead utilities, and the potential hazards posed by external factors, such as ambient temperature. Based on the identified hazards, the HASP specifies the minimum level of personal protective equipment (PPE) to be worn, the type(s) of monitoring to be conducted, the circumstances under which the minimum PPE would be upgraded, and other protective measures. The HASP also provides site-specific emergency contact information and the route to the nearest hospital with an emergency room.

All field personnel involved in the Phase II investigation were required to review the HASP prior to any fieldwork involving possible exposure to the potential chemical or physical hazards and to sign a HASP Distribution Record form to acknowledge that they have reviewed it and agree to abide by its requirements. The subject additional Phase II investigation was completed without any health and safety incidents.

2.2 SUBSURFACE UTILITY CLEARANCE AND GEOPHYSICAL UST INVESTIGATION

Prior to any intrusive field work, boring locations were marked out on the ground surface with white chalk-based paint, lath staking with white tape, and/or white 6-inch marking whiskers or "rooster tails." Visual indicators of possible subsurface utility conflicts, such as trench scars, vault alignments, and the like, were considered prior to marking the locations. Following boring mark-out, Avocet notified Underground Service Alert of Southern California (aka DigAlert) a minimum of 48 hours (two working days) prior to any intrusive investigations so that the appropriate utility companies had opportunity to check for potential conflicts.

In addition to contacting DigAlert, Avocet contracted GEOVision Geophysical Services, of Corona, California, to clear the proposed boring locations for subsurface utility conflicts and to screen for possible remaining USTs (REC 4). On November 12, 2021, GEOVision conducted geophysical surveys in 20-foot squares centered on each of the marked boring locations and screened the area extending for a distance of 40 feet from the vehicle maintenance garage's southern and eastern walls for USTs. GEOVision used a combination of ground-penetrating radar, a magnetometer, a terrain conductivity meter, a metal detector, as well as other utility locating equipment. While in the field, GEOVision marked any subsurface anomaly, and boring locations were adjusted, as needed, to avoid potential subsurface utilities. During and following the field work, the geophysical data was processed by GEOVision and it was concluded that there are no anomalies in the data set indicating the presence of a UST. The full geophysical investigation report provided by GEOVision can be found in Appendix A.

2.3 DRILLING AND SOIL SAMPLING

On November 15 through 17, 2021, Strongarm drilled Soil Borings SB-1 and SB-2 and Soil Vapor Probe Borings SG-1 through SG-18 to 15 feet bgs. Where necessary, the asphalt or concrete pavement was first cored to provide access to the underlying soil. The borings were initially advanced to 10 feet bgs using a standard 3.25-inch-diameter hand auger, which was decontaminated prior to first use and between borings, as discussed in Section 2.7. The borings were then advanced from 10 to 15 feet bgs using a GeoProbe® direct-push drill rig. During drilling, Avocet collected depth-discrete soil matrix samples for visual classification and possible chemical analysis. The samples were collected in 2-inch-diameter by 6-inch-long stainless-steel sleeves in a hardened steel sampling device driven into the soil using a geotechnical slide hammer. Upon retrieval from the boring, soil matrix "subsamples" for VOC analysis were collected from selected soil matrix samples in 5-gram Terra Core® devices in accordance with EPA Method 5035. After collecting the Terra Core® subsamples, the ends of the soil-filled sample sleeves were sealed with plastic end caps lined with Teflon® foil. The Terra Core® devices containing the subsamples and the sealed stainless steel sample sleeves were labeled, sealed in freezer bags, and immediately placed on ice in a cooler. Chain-of-custody procedures were followed at all times from sample collection to delivery to the Eurofins Calscience, LLC (Eurofins) laboratory in Garden Grove, California. On completion of drilling and soil sampling, soil vapor probes were installed in the 18 soil vapor probe borings as described in Section 2.6.

2.4 SOIL SCREENING AND SAMPLE ANALYSIS

Drill cuttings from the borings and excess soil from the sampling devices were carefully examined in the field and screened for indications of contamination, including, but not limited to, discoloration, excess moisture, and/or odors in ambient air. In addition, soil subsamples from the borings were screened for the possible presence of organic vapors using a calibrated photoionization detector (PID). The organic vapor screening process involved placing a soil subsample in a freezer bag, allowing organic vapors (if any) to equilibrate, and then screening the bag headspace for organic vapors using the PID. The soils encountered were visually classified based on the Unified Soil Classification System and ASTM International Standard D2488 (ASTM, 2017) and the descriptions recorded on field boring logs. No elevated PID readings were recorded

in any of the 20 borings, nor were there any other indications of environmental impacts, such as soil discoloration or odors in ambient air. The boring logs, which include a schematic of the installed soil vapor probes, are presented in Appendix B to this report.

Avocet hand delivered the soil matrix samples to the Eurofins laboratory in Garden Grove at the conclusion of the drilling work. Eurofins analyzed the select soil matrix samples for the following analytes using standard EPA methods:

- VOCs, including fuel oxygenates, using EPA Method 5035/8260B
- TPH using EPA Method 8015B (modified) for carbon chain ranges C_6 to C_{44}
- Title 22 metals using EPA Method 6010B/7471A
- PCBs using EPA Method 8062

The "SB" borings were biased borings drilled and sampled to depths of 15 feet bgs to investigate the hydraulic hoists. Soil matrix samples collected from depths of 7.5, 10, 12.5, and 15 feet were analyzed for TPH, with the 7.5- and 10-foot bgs soil samples further analyzed for PCBs. Except for SG-18, which was a biased boring targeting an oil/water separator, the "SG" borings were largely unbiased borings drilled and sampled to depths of 15 feet bgs to investigate areas of the site with no specific identified environmental conditions. Soil samples collected from the SG borings at depths of 5 and 15 feet were analyzed for TPH and VOCs. Finally, soil samples from depths of 1 foot and 5 feet in all of the odd-numbered borings (i.e., SB-1, SG-1, SG-3, etc.) were analyzed for Title 22 metals[3].

The results of the soil matrix sample analyses are summarized in Tables 1 through 4 and presented in full in the three Eurofins laboratory reports in Appendix C. The Eurofins laboratory in Garden Grove is certified by the State of California for the analytical methods used.

2.5 SOIL MATRIX QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

Field QA/QC measures associated with the collection and analysis of soil matrix samples included the analysis of trip blank samples and the collection and analysis of equipment decontamination blank samples.

2.5.1 Soil Matrix Trip Blank Samples

Soil-matrix-related trip blank samples consisted of distilled, deionized, organic-free water provided in 40-milliliter (mL) vials by the analytical laboratory. The trip blank samples were shipped from Eurofins in the same coolers or boxes as the empty sample containers and remained with the sample containers at all times while onsite. The trip blank samples were then returned, unopened, to Eurofins for analysis along with the soil-filled sample containers. Three soil-matrix-related trip blank samples were analyzed for VOCs using EPA Method 8260B and the results are summarized in Table 2. As indicated in the table, VOCs were not detected in the trip blank samples.

[3] In Soil Boring SB-1, rather than the 5-foot soil sample, the 7.5-foot soil sample was analyzed for metals.

2.5.2 Soil Matrix Equipment Decontamination Blank Samples

Soil-matrix-related equipment decontamination blank samples consisted of distilled water poured over or through soil sampling equipment to assess the effectiveness of the equipment decontamination process. Three soil-matrix-related equipment blank samples were collected in bottleware supplied by, and returned to, Eurofins along with the soil matrix samples. The soil matrix equipment blanks were analyzed for VOCs using EPA Method 8260B and the results are summarized in Table 2. As indicated in the table, VOCs were not detected in the equipment blank samples.

2.6 SOIL VAPOR PROBE INSTALLATION AND SAMPLING

Following drilling and soil matrix sample collection, Strongarm installed dual-nested soil vapor probes in each of the SG borings, as outlined below. Vapor probes were installed and sampled in general accordance with current California guidance for active soil vapor investigations (DTSC, et al., July 2015).

2.6.1 Probe Installation

To provide vertical concentration gradient data throughout the site, nested soil vapor probes were installed at nominal depths of 5 and 15 feet bgs in Borings SG-1 through SG-18. The soil vapor probes featured a porous 316 stainless steel tip, with a 50-micron filtration rating, connected to ⅛-inch outside diameter Nylaflow® tubing extending approximately 2 feet above the ground surface. The porous tip is designed to be gas permeable while preventing the intrusion of fine-grained material that could potentially clog the Nylaflow® tubing. The upper and lower probe tips were installed at the mid-point of a nominal 12-inch filter pack of clean No. 3 silica sand and isolated from one another by granular bentonite hydrated in place in 6-inch lifts with potable water. The annular space above the upper probe was sealed in a similar manner to approximately 1 foot beneath the surface grade. Each dual-nested probe was completed at the surface with a gas-tight valve to prevent off-gassing and protected inside a 4-inch-diameter traffic-rated vault set in concrete and finished flush with the surrounding pavement.

2.6.2 Soil Vapor Sampling and Analysis

In accordance with current regulatory agency guidance (DTSC, et al., July 2015), probes installed in 3.25-inch-diameter borings must be allowed a minimum of 48 hours to equilibrate prior to being purged and sampled. On November 24, 2021, after allowing well over 48 hours for equilibration, Avocet purged and sampled all of the probes installed as part of the subject investigation. Avocet used a sampling pump to purge the probes of three "sample train volumes" at a rate of 200 mL per minute in accordance with current regulatory agency guidance (DTSC, et al., July 2015). Soil vapor samples were then collected from each of the depth-discrete probes in 1-liter, batch-certified SUMMA canisters provided by Eurofins. On completion of sampling, the SUMMA canisters were hand delivered to the Eurofins laboratory in Garden Grove, where they were analyzed for VOCs, including fuel oxygenates, using EPA Method TO-15. The results of the soil vapor sample analyses for VOCs are summarized in Table 5 and presented in full in the Eurofins laboratory reports in Appendix D.

2.6.3 Soil Vapor QA/QC

QA/QC measures associated with soil vapor sampling and analysis included the following:

- A shut-in test was conducted on each vapor probe to check for leaks in the aboveground sample train. For the shut-in test, the aboveground sample train was evacuated, using a syringe, to at least 100 inches of water with the block valves on the attached SUMMA canister and at the probe head closed. If a noticeable loss of vacuum had been observed, the sample train would have been reassembled and the test repeated; however, no significant loss of vacuum was observed at any sample location.

- The use of 1,1-difluoroethane (1,1-DFA) as a leak detection compound (LDC) to verify the integrity of the sample train during sample collection. In brief, 1,1-DFA was applied to paper towels placed around the probe and the sample train during the sampling process and 1,1-DFA was included in the analytical suite as an indicator of the integrity of the probe and the sample train. The LDC was detected in one of the 40 soil vapor samples submitted for testing: the 5-foot sample from Probe SG-6 (36 micrograms per cubic meter [µg/m^3]). Pursuant to current regulatory guidance (DTSC, et al., July 2015), since the concentration of LDC in the sample was greater than or equal to 10 times the reporting limits for the target analytes, the reported soil vapor concentrations from this sample are considered estimates. Overall, the soil vapor data are considered useable for decision-making in the context of divesting or repurposing the State Street Property.

- Four duplicate soil vapor samples were collected from Probes SG-10, SG-13, SG-16, and SG-18 as a check for sample homogeneity and laboratory precision. The duplicate samples were collected in parallel with the primary soil vapor samples and handled in the same manner as the primary samples. The duplicate samples were analyzed for VOCs, including fuel oxygenates, using EPA Method TO-15. Data precision for the soil vapor duplicate samples are discussed further below.

- The SUMMA canisters and the associated flow regulators and vacuum gauges were provided by Eurofins and were batch-certified as "clean" using EPA Method TO-15 certification criteria.

Four field duplicate soil vapor samples were analyzed for VOCs using EPA Method TO-15 to assess data precision. Pursuant to EPA guidance (EPA, June 2018), precision criteria for VOCs in nonaqueous samples may be evaluated in one of two ways based upon the analyte concentrations relative to their sample quantitation limit (SQL[4]), as follows:

[4] Note that the SQL, as defined by EPA, is the method detection limit corrected for sample dilution and other sample-specific adjustments (EPA, 1991). As such, the SQL can be considered synonymous to the Reporting Limit (RL).

- **Scenario 1** – Where concentrations of both the primary and duplicate samples are greater than or equal to 5 times the SQL, the relative percent difference (RPD) must be less than or equal to 50 percent.

- **Scenario 2** – Where one or both sample/duplicate concentrations are less than 5 times the SQL, the absolute difference must be lower than 4 times the SQL. If the SQLs for the primary and duplicate samples are not equal, the lower, more conservative SQL is used for comparison.

RPDs and absolute differences were calculated for the VOCs, as summarized in Table 7. Based on those calculations and the above-described scenarios, with the exception of acetone, a common laboratory artifact, the data from the primary and duplicate samples from Probes SG-16 and SG-18 satisfied the precision criteria for Scenarios 1 and 2. In the primary and duplicate samples from Probes SG-10 and SG-13, the reported concentrations of one or more of benzene, carbon disulfide, *o*-xylene, tetrachloroethene (PCE), and/or toluene marginally exceeded the precision criteria. The samples from Probe SG-10 at 5 feet were analyzed by the laboratory in two different batches and with different dilution factors, so the minor exceedances of the precision criteria may be explained by laboratory practices and likely do not extend to other samples. In light of these facts and the associated uncertainty, concentrations of benzene, carbon disulfide, PCE, and toluene in samples from Probe SG-10 are qualified as estimated. Two analytes, *o*-xylene and toluene, in the samples from Probe SG-13 exceeded the precision criteria. Therefore, in accordance with regulatory guidance, detected and nondetected results for these analytes are qualified as estimates in the 5-foot samples from Probe SG-13[5] as well as in the 5- and 15-foot samples from Probes SG-11 and SG-12, which were analyzed as part of the same batch. The aforementioned exceedances of the precision criteria are not considered indicative of a systematic precision issue and, therefore, the soil vapor data are considered useable for decision-making in the context of divesting or repurposing the State Street Property.

2.7 EQUIPMENT DECONTAMINATION

Drilling, soil sampling, and related equipment was decontaminated, as appropriate, between borings and sampling attempts. Field equipment likely to come into contact with the soil matrix samples was cleaned in a solution of Alconox® and potable water. Cleaned equipment was double rinsed with potable water and given a final deionized or distilled water rinse. Wherever possible, dedicated and/or disposable equipment was used to minimize the potential for cross-contamination between borings. The effectiveness of the cleaning process was assessed by collecting one equipment decontamination blank sample for each day of drilling and soil matrix sampling for VOC analysis. As described in Section 2.5.2, VOCs were not detected in any of the equipment blank samples.

[5] It is noteworthy that the 5- and 15-foot samples from Probe SG-13 were analyzed in different batches.

2.8 INVESTIGATION-DERIVED WASTE MANAGEMENT

IDW generated over the course of the subject Phase II investigation included drill cuttings and equipment decontamination rinsate. These solid and liquid wastes were combined and sealed in three 55-gallon drums, supplied by American Integrated Services (AIS), of Wilmington, California, which were labeled and placed in temporary storage at the site. To profile the IDW for disposal purposes, Avocet used a representative sample collected on November 24, 2021. The sample was hand delivered to the Eurofins laboratory in Garden Grove, where it was analyzed for TPH, VOCs, and Title 22 metals. Upon receipt and review of the analytical data (Appendix E), the waste was classified as nonhazardous. AIS transported the drums to the Soil Safe thermal treatment and recycling facility in Adelanto, California. A copy of the IDW manifest is included in Appendix F.

3.0 FINDINGS

This section presents the findings of the Phase II investigation in terms of lithologic conditions and the results of the analysis of the soil matrix and soil vapor samples from the 20 newly installed borings.

3.1 SUBSURFACE CONDITIONS

The State Street Property is underlain by a variable thickness of artificial fill, which, in turn, is underlain by the Bay Point Formation, a Quaternary-aged near-shore marine and nonmarine, poorly consolidated sedimentary deposit that is about 100,000 years old. The Bay Point Formation is composed of marine and non-marine poorly consolidated, fine- and medium-grained, pale-brown, fossiliferous sandstone with subordinate silty and clayey interlayers. Groundwater was not encountered in any of the onsite borings but reportedly occurs at depths ranging from 46 to 49 feet bgs and flows toward the southwest into San Diego Bay.

3.2 SOIL MATRIX RESULTS

Twenty borings were drilled at the site (SB-1 and SB-2, and SG-1 through SG-18) as a part of the Phase II investigation. SB-1 and SB-2 were located in the vehicle maintenance garage targeting the two in-ground hydraulic lifts, SG-18 was located under the metal awning attached to the south wall of the vehicle maintenance garage targeting the oil/water separator, while the remaining nonbiased borings were distributed throughout the site for spatial coverage (Figure 3). Soil matrix samples were collected from each boring at various depths up to 15 feet bgs and were analyzed for one or more of TPH, VOCs, PCBs, and Title 22 metals using the analytical methods listed in Section 2.4. The TPH, VOCs, metals, and PCBs results are described below, summarized in Tables 1, 2, 3, and 4, respectively, and are presented in full in the Eurofins laboratory reports in Appendix C.

- TPH (carbon chain C_6 through C_{44}) was reported in 7 of the 44 soil matrix samples analyzed (Table 1), at concentrations ranging from 4.8 to 130 milligrams per kilogram (mg/kg). The TPH concentrations were reported primarily in the high molecular weight oil range and are well below the SFBRWQCB commercial/industrial ESLs and the more conservative and applicable residential ESLs. As such, the reported TPH is considered a *de minimis* condition.

- None of the four soil matrix samples analyzed contained detectable concentrations of any PCBs (Table 4).

- Acetone was reported in 10 of the 36 samples analyzed for VOCs (Table 2), at concentrations ranging from 18 to 110 micrograms per kilogram (µg/kg). Acetone is a common laboratory artifact and it is likely that most or all of the reported acetone concentrations reflect laboratory contamination. Moreover, all of the reported acetone concentrations are several orders of magnitude below potentially applicable residential and commercial/industrial screening levels. 2-Butanone (or methyl ethyl

ketone [MEK]) was reported in 1 of the 36 samples analyzed for VOCs (Table 2), at a concentration of 18 µg/kg, several orders of magnitude below potentially applicable residential and commercial/industrial screening levels. As such, the detected VOC concentrations are considered *de minimis* environmental conditions.

- Metals occur naturally in soil, so evaluation of the metals data must occur in the context of the range of concentrations known to occur naturally in California soil. For purposes of this evaluation, we rely on the work of Bradford, et al. (1996), entitled "Background Concentrations of Trace and Major Elements in California Soils." Of the 17 metals included in the Title 22 list, 10 were detected in 1 or more of the 22 soil matrix samples analyzed. Seven of the ten metals, including barium, beryllium, chromium, cobalt, copper, nickel, and vanadium, were detected in essentially all of the 22 soil matrix samples analyzed, at concentrations within the range of values characterized by Bradford, et al. (1996) as naturally occurring as well as at concentrations below the most conservative residential screening levels.

- Arsenic was detected in 1 of the 22 soil matrix samples at a concentration of 3.33 mg/kg, a value just slightly greater than the RL (2.5 mg/kg). However, as is often the case in California soils, the detected value is above risk-based screening levels. Because arsenic occurs naturally in soils at concentrations above risk levels, its presence is commonly evaluated in terms of regional background concentrations. Statistical studies conducted in association with DTSC have established a conservative upper bound estimate of 12 mg/kg for background arsenic in southern California soils (Chernoff, et al., 2008). Other studies using smaller data sets have established a more conservative upper bound estimate of 6 mg/kg for background arsenic in soil at Los Angeles Unified School District sites (DTSC, June 6, 2005). Based on this information, the arsenic concentration is well within the established range of background values and is considered a *de minimis* environmental condition.

- Lead was detected in seven soil samples and zinc in ten, and there does appear to be an association between these two metals. All seven of the soil matrix samples that contain lead also contain zinc. Lead concentrations in the seven soil samples range from 11.6 to 76.1 mg/kg, and zinc concentrations in the ten soil samples range from 9.8 to 49.5 mg/kg. Although none of the lead concentrations exceed the maximum naturally occurring concentration in California soils (97.1 mg/kg; Bradford, et al., 1996), five of the seven are greater than the California average concentration (23.9 mg/kg), suggesting a possible anthropomorphic contribution. Although the potential exists that lead and zinc reflect low levels of shallow soil contamination, all of the detected concentrations are less than the most conservative residential screening levels (lead: 80 mg/kg; zinc: 23,000 mg/kg). Therefore, the presence of slightly elevated concentrations of lead and zinc in shallow site soil (OEF 8 – Impacted Fill) is considered a *de minimis* environmental condition and not a significant constraint to site redevelopment for residential use.

3.3 VOCs IN SOIL VAPOR AND VAPOR INTRUSION ASSESSMENT

Soil vapor samples were collected from dual-nested soil vapor probes at 18 locations throughout the State Street Property. Including duplicates, a total of 40 soil vapor samples from 18 dual-nested probes were analyzed for VOCs, including fuel oxygenates, using EPA Method TO-15. Consistent with the extremely low RLs achievable using EPA Method TO-15, all 39 soil vapor samples contained detectable concentrations of 1 or more of 25 VOCs (Table 5), excluding 1,1-DFA (the LDC), as follows:

VOCs in Soil Vapor Samples
(Units are micrograms per cubic meter or µg/m^3)

Compound	Detection Frequency	Concentration Range	
		5 feet bgs	15 feet bgs
1,1,2-Trichloro-1,2,2-trifluoroethane	9 / 40	16 - 44	12 - 20
1,1-Difluoroethane	1 / 40	36	ND
1,2,4-Trimethylbenzene	4 / 40	8 - 9.6	26
1,3,5-Trimethylbenzene	4 / 40	2.5 – 3.3	8.6
2-Butanone (Methyl Ethyl Ketone)	30 / 40	4.5 - 26	4.7 - 22
4-Ethyltoluene	2 / 40	3.1	4.8
4-Methyl-2-pentanone	1 / 40	34	ND
Acetone	39 / 40	12 - 79	10 - 35
Benzene	23 / 40	1.8 - 94	2.7 - 20
Bromoform	1 / 40	12	ND
Carbon disulfide	17 / 40	8.3 - 73	9.2 - 99
Chloroethane	1 / 40	21	ND
Chloroform	4 / 40	9.4 - 16	4.8-16
Chloromethane	2 / 40	150	1.2
cis-1,2-Dichloroethene	2 / 40	2.9 - 11	ND
Dichlorodifluoromethane	11 / 40	2.6 – 5.1	3 – 5.1
Ethanol	36 / 40	9.7 – 5,600	10 - 54
Ethylbenzene	14 / 40	2.5 - 13	3.4 – 5.4
Isopropanol	23 / 40	12 - 120	12 - 57
m,p-Xylene	13 / 40	13 - 49	8.7 - 28
Methylene Chloride	1 / 40	24	ND
o-Xylene	19 / 40	2.7 - 16	2.2 - 12
Tetrachloroethene	33 / 40	3.4 - 110	3.5 - 200
Toluene	33 / 40	4.2 - 60	2 - 27
