

Application Wizards

- OPSC Online has been updated to allow users to request School Facility Program (SFP) Natural Disaster Assistance via the new Form SAB 195.
- Career Technical Education Facilities Grant Program (CTEFP) wizard has been updated to allow the creation of a draft application in advance of a CTEFP filing round opening.
- The certifications required by the school district's superintendent or authorized representative, now require the user to confirm they have read the Terms and Conditions. Users must scroll through text before the certification box is enabled.

NEW! 50-Year Eligibility Baselines

The SFP Eligibility interface has been updated with new baseline ledgers to track the availability of 50-year old building eligibility under the Modernization program. This information is tracked internally by OPSC and will populate OPSC Online as OPSC processes new requests to establish or update Modernization eligibility. If needed, OPSC may be able to update specific sites, by request of the school district, to assist in planning future funding applications.

NEW! Notifications

- OPSC has added the ability for users to “subscribe” to applications to be notified via email when an application has been submitted, the status has changed, or a document has been uploaded. The functionality is turned “off” by default and all users will need to subscribe to new applications as well as previously submitted applications.
- OPSC has added visual banners for school districts prohibited from participating in State Allocation Board administered programs as a result of depositing proceeds from the sale of a site into the General Fund. The banners also notate when a Material Inaccuracy finding exists and the school district is prohibited from self-certifying program information.

Bug Fixes

Fixed an issue in the *Enrollment Certification Projection* (Form SAB 50-01) that removed data from Part C and Projection data after submittal and exporting to PDF.
