Notice of Preparation and
NOP Comments

NOTICE OF PREPARATION

Date:	March 3, 2026
To:	Responsible Agencies, Interested Parties, and Organizations
Subject:	Notice of Preparation of an Environmental Impact Report for the Capitol Mall Office Buildings Demolition Project
Lead Agency:	State of California Department of General Services
Contact:	Stephanie Coleman, Senior Project Planner Department of General Services, Real Estate Services Division, Project Management and Development Branch Mailing Address: P.O. Box 989052, West Sacramento, CA 95798 Street Address: 707 3rd Street, 4th Floor, MS-509, West Sacramento, CA 95605 Phone: (916) 376-1602
Comment Period:	March 3, 2026 to April 2, 2026

PURPOSE OF NOTICE

The California Department of General Services (DGS) is the lead agency responsible for preparation of an Environmental Impact Report (EIR) for the proposed Capitol Mall Office Buildings Demolition Project (proposed project), located in downtown Sacramento on Capitol Mall and N Street.

Pursuant to provisions of the California Environmental Quality Act (CEQA), DGS has prepared this Notice of Preparation (NOP) for the proposed project. Once a decision is made to prepare an EIR, the lead agency must prepare a NOP to inform all responsible and trustee agencies (agencies) that an EIR will be prepared (CEQA Guidelines Section 15082). The purpose of this NOP is to provide agencies, interested parties, and organizations with sufficient information describing the proposed project and the potential environmental effects to enable meaningful input related to the scope and content of information to be included in the EIR.

PROJECT LOCATION

The proposed project involves demolition of three state-owned office buildings in downtown Sacramento located on Capitol Mall and N Street; the Employee Development Department (EDD) Headquarters at 800 Capitol Mall (this building has structures on both the 700 and 800 blocks of Capitol Mall but the address is 800 Capitol Mall); the EDD "Solar Building" Annex at 751 N Street; and the State Personnel Board Building at 801 Capitol Mall (see Exhibits 1 and 2, below). Locations for project support facilities that may be needed outside these parcels, such as for equipment parking or staging areas, have not yet been identified. The EIR will also consider, at a programmatic level consistent with Section 15168 of the State CEQA Guidelines, a potential future development scenario at the building demolition sites.

PROJECT DESCRIPTION

The project would involve the demolition of three state-owned office buildings that have a combined gross floor area of approximately 729,700 square feet (sf), including approximately 479,300 sf at the EDD Headquarters at 800 Capitol Mall, approximately 166,000 sf at the EDD Solar Building Annex at 751 N Street, and approximately 84,400 sf at the State Personnel Board Building at 801 Capitol Mall. The total project area is approximately 5.5 acres. The purpose of the demolition is for DGS to remove underutilized office space and allow for the future development of other uses within these parcels.

Upon completion of the demolition, the site is intended to be ready for construction of future uses. DGS has been in discussions with California State University, Sacramento (hereinafter referred to as Sacramento State or University) for the potential reuse of the site. DGS has granted Sacramento State a period of exclusivity to evaluate the redevelopment potential of the site and DGS may, but has not guaranteed to, ultimately transfer the site to the California State University (CSU) system for use by Sacramento State. The intent of the proposed project is to demolish the subject properties regardless of whether a transfer to Sacramento State occurs.

The University is in early stages of developing a program for the site and intends to eventually prepare a master plan development proposal. The current vision is a Downtown Sacramento campus of Sacramento State, with various uses being considered, including but not limited to a school of public affairs, student housing, event center, Artificial Intelligence (AI) center, hotel, indoor performing arts and music venue, market rate housing, ground floor retail, and structured parking, along with interim uses of the site (e.g., surface parking, temporary/modular construction). The Downtown Sacramento campus could include up to 6,000,000 sf of building space. Any future buildings would be subject to height limits, setbacks and other constraints prescribed by the Capitol View Protection Act.

Because the University has only identified a preliminary range of possible uses for the project site but has not yet developed specific plans, there is insufficient detail at this time to analyze future uses at a project level of detail in the EIR (see CEQA Guidelines Section 15161). Accordingly, as identified above, the EIR will evaluate the site's future development at a programmatic level consistent with CEQA Guidelines Section 15168. Once the future land recipient is confirmed and a more detailed development scenario is identified, the CSU or other appropriate lead agency is expected to prepare a separate CEQA analysis for that scenario.

RESPONSIBLE AGENCIES

For the purposes of CEQA, the term "Responsible Agency" includes all public agencies other than the Lead Agency that have discretionary approval power over the project (CEQA Guidelines Section 15381). Discretionary approval power may include such actions as issuance of a permit, authorization, or easement needed to complete some element(s) of the proposed project. It is anticipated that approval from various City of Sacramento departments will be required to complete planned building demolition, removal of demolished building materials, utility modification or abandonment in City streets, and similar activities. Where City approval may constitute a discretionary decision, it is expected that the City will use the EIR for the Capitol Mall Office Buildings Demolition Project to support these decisions. It is anticipated that building demolition will also require consultation with and concurrence from the State Historic Preservation Officer regarding historical significance and impacts of proposed redevelopment. Other agencies whose approval may be required for the project include but may not be limited to the Central Valley Regional Water Quality Control Board, California Department of Transportation, Sacramento Metropolitan Air Quality Management District, and Sacramento Municipal Utility District.

POTENTIAL ENVIRONMENTAL EFFECTS

The EIR will describe the direct and indirect environmental impacts of the Capitol Mall Office Buildings Demolition Project. It is anticipated that the EIR will address potential impacts associated with the proposed project for the issue areas described below. In addition, the EIR will evaluate cumulative impacts, growth-inducing impacts, and project alternatives. The EIR would evaluate the site's future development at a programmatic level as described above.

Land Use

The project site is located in downtown Sacramento; the demolition of the existing office buildings and future development of the site would not physically divide this community. The demolition project would not include development of new roadways/freeways/arterials, lengthy walls or fences, or other physical impediments to cross-community access. Although the project site is located in the City of Sacramento, the site is under the jurisdiction of the State; therefore, the project is not subject to city land use plans or zoning. Nonetheless, in addition to evaluating

consistency with the State's Capitol Area Plan, the EIR will discuss the project consistency with relevant City of Sacramento planning policies. There are no habitat conservation plans or natural community conservation plans applicable to the project area.

Population, Employment, and Housing

The EDD Headquarters building is in the process of being decommissioned and will be vacated in Spring 2026. The EDD Solar Building Annex is currently vacant. The State Personnel Board Building is currently occupied, and staff will be relocated to other existing DGS office buildings or commercially leased space. Removal of the office buildings would bring new demolition workers into the downtown area until demolition is complete. Given the proposed possible future uses of the site, including housing, site development could bring new employees and residents. Therefore, the EIR will include a programmatic analysis of the existing population and housing characteristics of the region and downtown area and potential effects of the project on population and housing, including the need for additional housing, effects on existing housing in the Capitol Area, and the effect on the local housing inventory.

Transportation and Circulation

The EIR will evaluate the project's demolition-period AM and PM peak hour trip generation and how the project may affect roadway, bicycle, pedestrian, and transit systems. Vehicle miles traveled (VMT) and access to the project will also be assessed. A programmatic analysis will be conducted for the future development of the site.

Utilities and Infrastructure

The EIR will identify and assess any utility modifications resulting from demolition of the buildings. For example, the three buildings proposed to be demolished would be disconnected from the Central Plant, which provides heating and cooling to multiple State-owned buildings in the Capitol Area. In addition, the EIR will evaluate the project-related impacts to infrastructure and capacity of water supply and treatment, sewer and wastewater treatment, drainage and stormwater, electricity, and natural gas at a programmatic level for the potential future use of the site. Wastewater treatment and disposal for the proposed project would be provided by the Sacramento Area Sewer District's Sacramento Regional Wastewater Treatment Plant (SRWTP). Under existing conditions, wastewater generated in the project area is conveyed to the SRWTP by the City's combined stormwater runoff and sanitary sewer system. The City of Sacramento is the water supplier for the project site. The EIR will programmatically evaluate the environmental effects of any new or modified utility infrastructure associated with the potential future development of the project site.

Air Quality

The proposed project site is located within the Sacramento Valley Air Basin (SVAB), within the jurisdiction of the Sacramento Metropolitan Air Quality Management District (SMAQMD), which administers local, state, and federal air quality management programs for Sacramento County. As is typical of construction and demolition projects, movement of equipment and wind over demolition debris and bare soils could generate airborne dust. Heavy equipment and vehicles would emit exhaust, including ozone precursors, particulate matter, and air toxics. The air quality analysis in the EIR will analyze air quality effects from the demolition activities and provide a programmatic assessment of potential future development consistent with SMAQMD's air quality screening criteria.

Greenhouse Gas Emissions and Climate Change

Demolition of the office buildings and future development of the site would generate greenhouse gas (GHG) emissions. Therefore, the EIR will quantify GHG emissions from building demolition and, programmatically, for future construction and operational activities (i.e., building energy, vehicle trips) associated with potential future

development. The GHG analysis will also include a qualitative discussion of any potential for the project to exacerbate the adverse effects of climate change, including increased risk of flooding associated with changes to precipitation patterns.

Energy

Demolition of the office buildings and future development of the site would require energy use. The EIR will estimate energy use and evaluate where implementation of the project could result in the inefficient, wasteful, or unnecessary consumption of energy during demolition and, at a programmatic level, operation of potential future development.

Noise

Implementing the proposed project would result in short-term and long-term increases in ambient noise levels. The EIR will include a description of the existing noise environment, including noise sources and sensitive receptors in the project area. The EIR will assess potential short-term (i.e., demolition/construction) and, programmatically, long-term (i.e., operational) noise impacts to sensitive receptors. Operational noise changes may be generated by proposed stationary sources such as ground floor commercial uses, emergency backup generators, HVAC equipment, and parking facilities, as well as mobile sources such as vehicle trips. Because future uses are as yet conceptual, operational noise will be evaluated at a programmatic level in the EIR.

Geology and Soils

No known faults or Alquist-Priolo special studies zones are located in or adjacent to the City of Sacramento; therefore, the proposed project site would not be subject to fault rupture. Project design for the future use of the site will be required to comply with applicable seismic building codes. Although future development would adhere to these construction standards, and the seismic risk in Sacramento is low, the risk associated with constructing future development at the site will be assessed programmatically in the EIR, including geologic and soils hazards such as liquefaction, expansive soils, and lateral spread. Soils exposed during demolition, construction, and grading can be susceptible to erosion and erosion potential will also be evaluated in the EIR.

Hydrology and Water Quality

It is anticipated that the project's principal water quality concerns will be related to demolition and construction activities, which could result in increased erosion and sedimentation associated with stormwater runoff. Urban contaminants such as oil, grease, heavy metals, and pesticides and herbicides from proposed development could also be present in runoff. The project would need to comply with the requirements of the National Pollutant Discharge Elimination System General Permit for Construction Activities, including preparation and implementation of a Storm Water Pollution Prevention Plan and site-specific erosion control measures and Best Management Practices. Because the project site is currently developed with impervious surfaces of various types (e.g., buildings, driveways, sidewalks), the project would not result in a substantial increase in impervious surfaces such that interference with groundwater recharge would occur.

Hazardous Materials and Public Health

Evaluations of the potential presence of hazardous materials are being prepared for the project and additional contaminant testing is being conducted, which will identify any known hazardous materials or sources of potential hazards (e.g., contaminated soil or groundwater, asbestos, lead paint) on the project site or vicinity. If present, hazardous materials could be released during demolition of the existing buildings and grading/earth moving during demolition and construction. The future use of the project site would not involve activities such as industrial or manufacturing uses that could generate hazardous emissions. However future uses at the site would involve the use

and storage of small quantities of hazardous materials, such as cleaning materials, commonly used at office and commercial locations. The routine transport, use, and disposal of such materials would be limited. Federal, state, and local laws regulate every aspect of hazardous materials transport, use, and storage. These regulations are designed to avoid significant hazards to the public and environment. Nonetheless, these issues will be analyzed further in the EIR.

Historical, Archaeological, and Tribal Cultural Resources

The project would demolish three buildings, two of which are known to be contributors to a historic district (EDD Headquarters and the State Personnel Board Building); the third, the Solar Building, will be evaluated for potential historical significance. The demolition and future redevelopment could also affect off-site historically significant buildings, including the adjacent Sutter Club and nearby Stanford Mansion. The EIR will use the results of a historical resources analysis to determine potential impacts to the existing buildings and the historic setting, and facilitate consultation with the State Historic Preservation Officer per Public Resources Code Section 5024/5024.5 addressing the treatment of State-owned resources. In addition, outreach to the Native American community will be conducted to solicit information on tribal cultural resources concerns or issues. There is potential for buried precontact and historic-era resources within much of downtown Sacramento, and potential impacts to these resources during project activities will be considered in the EIR.

Biological Resources

Sensitive biological resources are those protected by federal, state, or local resource conservation agencies and organizations. The project site is developed with urban uses and is not anticipated to support sensitive habitats or habitat for any special-status species. The EIR will disclose the common biological resources in the area, including vegetation and wildlife, and if identified, the EIR will evaluate the project's potential to impact common and sensitive biological resources.

Public Services

The Sacramento City Fire Department (SCFD) provides fire protection and emergency medical services to the project area, including state-owned office buildings. Demolition of the buildings will not require the need for additional services to the site, and it is assumed that any future development of the project site will be designed and constructed in compliance with all applicable fire protection regulations. The EIR will programmatically evaluate the potential impact of future development to the provision of police and fire protection services. Although it is anticipated that existing police services and facilities would be adequate to serve the future use of the site, the EIR will programmatically evaluate the future uses impact to law enforcement. The potential net increase in population in downtown Sacramento associated with the potential future use of the site will also be considered in programmatically evaluating the project's potential impacts to the provision of parks and recreation facilities and schools.

Aesthetics/Light and Glare

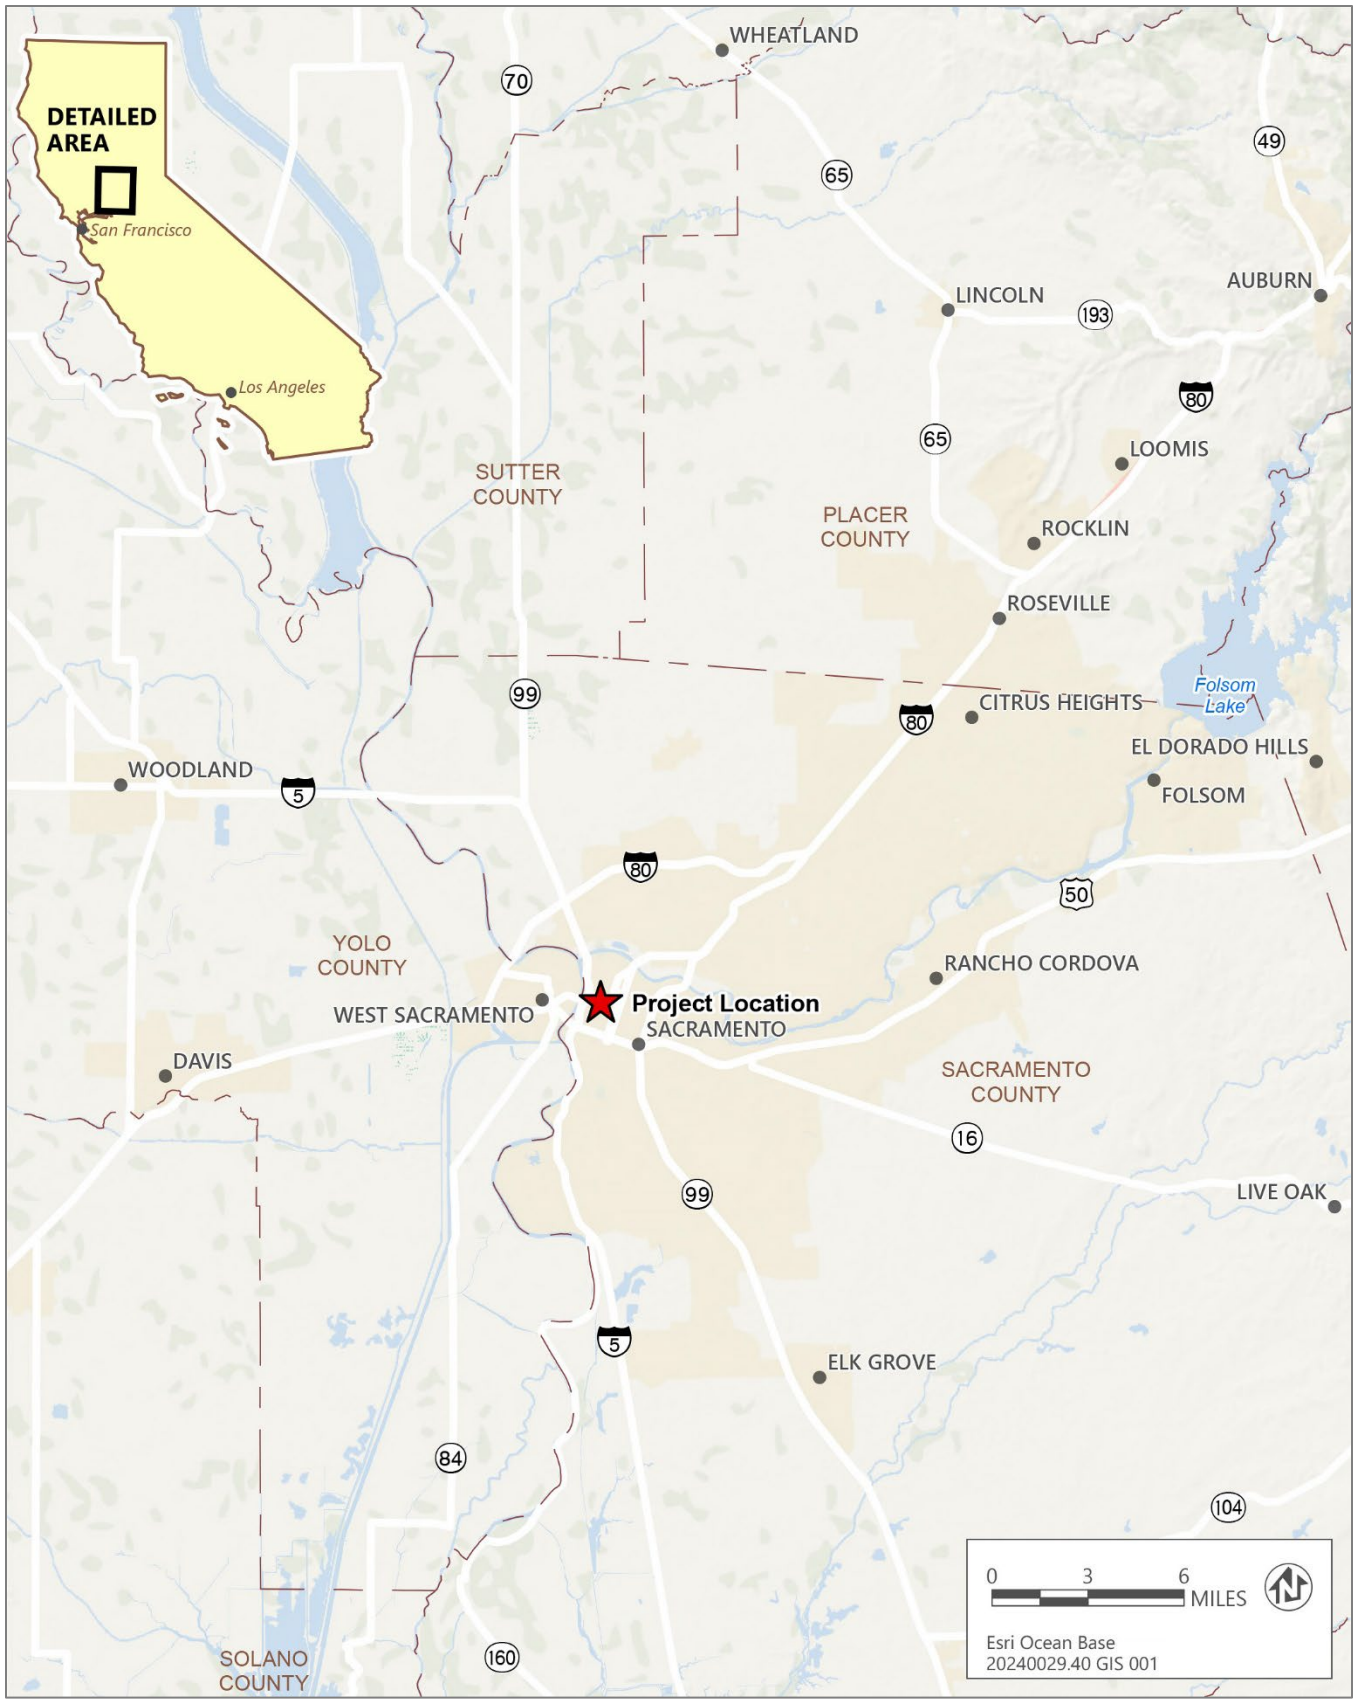
The proposed project site and areas that may be considered for related facilities are located in downtown Sacramento and are currently developed with urban uses. Demolition of the office buildings would be a temporary change to the visual character of the project area and will be evaluated in the EIR. The EIR will also programmatically evaluate the potential impacts of the future development of the site to the visual character of the developed downtown environment, including building heights, mass, and setbacks; tree removal; potential obstruction of important view corridors; any increase in light and glare or shadow effects; and compliance as applicable with the Capitol View Protection Act (Section 8162.5 et seq. of the Government Code).

Cumulative Impacts

Implementation of the proposed project could potentially result in significant impacts to the above resource areas. When considered together with the effects of past approved projects, other current projects, and probable future projects, the project's contribution to the cumulative effect of all these activities could be considerable. These conditions will be evaluated in the EIR.

Alternatives

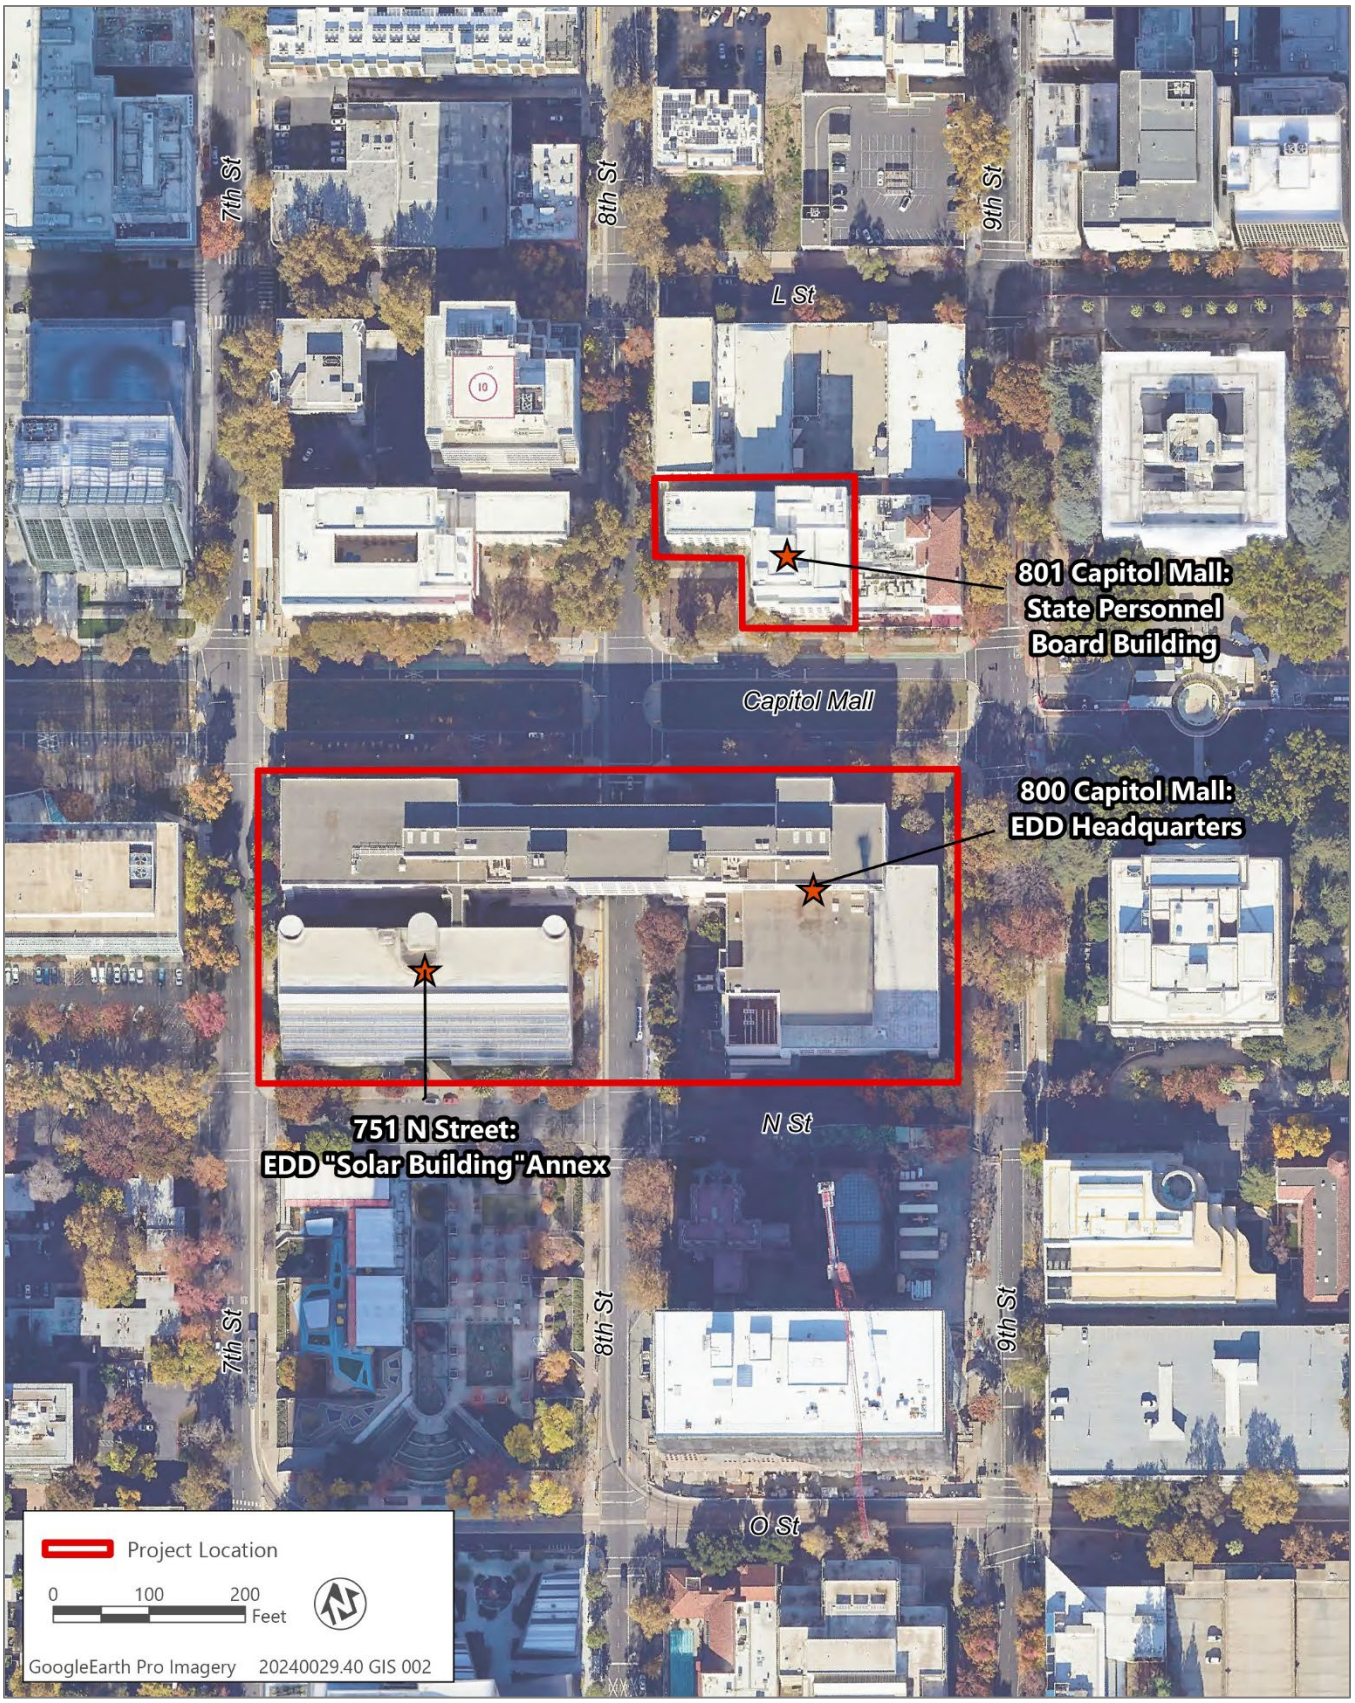
In accordance with the State CEQA Guidelines (14 CCR Section 15126.6), the EIR will describe a range of reasonable alternatives to the proposed project that are capable of meeting most of the project's objectives, and that would avoid or substantially lessen any of the significant effects of the project. The EIR will also identify any alternatives that were considered but rejected by the lead agency as infeasible and briefly explain the reasons why. The EIR will provide an analysis of the No-Project Alternative and will also identify the environmentally superior alternative.



PUBLIC REVIEW PERIOD

This Notice of Preparation is being circulated for public review and comment for a period of 30 days beginning March 3, 2026. A scoping meeting will be held from 4:30 PM to 5:30 PM on March 17, 2026 at the Sacramento Central Library, 828 I Street, West Meeting Room. Agencies and individuals are invited to attend the scoping meeting to obtain information about the project, ask questions of project team members, and provide comments. Written comments will be accepted by DGS through 5:00 PM on April 2, 2026. Comments must be delivered or mailed to Ms. Stephanie Coleman at the address listed above.

Copies of the full Notice of Preparation may be reviewed at the following locations:



- The DGS website at https://www.dgs.ca.gov/RESD/Resources/Page-Content/Real-Estate-Services-Division-Resources-List-Folder/Notices-Information-Resources-for-CEQA
- Sacramento Central Library at 828 I Street during library hours;
- Department of General Services, Environmental Services Section, between 8:00 AM and 4:30 PM; or
- Request a copy by email at environmental@dgs.ca.gov.

Your views and comments on how the project may affect the environment are welcomed. Please contact Ms. Stephanie Coleman if you have any questions about the environmental review process for the Capitol Mall Office Buildings Demolition Project.

You don't often get email from d3.local.development@dot.ca.gov. Learn why this is important

Good afternoon Stephanie,

Thank you for including the California Department of Transportation in the review process for the Capitol Mall Office Buildings Demolition Project. We wanted to reach out and let you know that we have no comments at this time.

Please provide our office with copies of any further actions regarding this proposal. We would appreciate the opportunity to review and comment on any changes related to this development.

Should you have questions please contact me, Local Development Review and System Planning Coordinator, by phone (530) 812-6874 or via email at D3.local.development@dot.ca.gov.

Thank you!

Respectfully,
Robynn Spence

PROJECT TITLE: Capitol Mall Office Buildings Demolition Project

Public Resources Code (PRC) section 3208.1 establishes re-abandonment responsibility when previously plugged and abandoned oil, gas or geothermal wells will be impacted by planned property development or construction activities. Local permitting agencies, property owners, and/or developers should be aware of, and fully understand, that significant and potentially dangerous issues may be associated with development near previously abandoned oil, gas, and geothermal wells.

The California Geologic Energy Management Division (CalGEM) has received the above-referenced project dated 3/3/2026. To assist local permitting agencies, property owners, and developers in making safe and practical land use decisions regarding potential development near oil, gas, or geothermal wells, CalGEM provides a table in the attached enclosure of the wells within the parcel boundary or in its vicinity, based on CalGEM's Well Finder database (https://maps.conservation.ca.gov/doggr/wellfinder/).

CalGEM categorically advises against building over, or in any way impeding access to, oil, gas, or geothermal wells. Impeding access to a well could result in the need to remove any structure or obstacle that prevents or impedes access including, but not limited to, buildings, housing, fencing, landscaping, trees, pools, patios, sidewalks, roadways, and decking at the landowner's expense if there is a need to access a well. Maintaining sufficient access is considered the ability for a well servicing unit and associated necessary equipment (consisting of well servicing rig, pumping equipment, pipe trailer) to reach a well from a public street or access way, solely over the parcel on which the well is located. A well servicing unit, and any necessary equipment, should be able to pass unimpeded along and over the route, and should be able to access the well without disturbing the integrity of surrounding infrastructure. Impermeable barriers such as asphalt, concrete, and plastic may trap hazardous gases and liquids underneath and could create a safety hazard if built over a well that later develops a leak.

Docusign Envelope ID: 479C0BB4-5EE8-47D5-B748-A207B08656B8

CalGEM recommends that any well for which access is impeded or built over, against CalGEM's advice, should be evaluated by a qualified petroleum professional for compliance with the statutory objectives of isolating all hydrocarbon-bearing strata; protecting underground and surface waters; prevention of subsequent damage to life, health, property, and other resources; and prevention of loss of oil, gas, or reservoir energy. CalGEM recommends that wells that do not meet these standards are abandoned or re-abandoned prior to construction. The well information can be accessed through CalGEM's Well Finder database mentioned above. PRC section 3208, subdivision (a), provides the primary statutory authority for CalGEM to oversee adequate abandonment of wells. Additionally, CalGEM has developed the regulatory guidance for operators to be followed during well abandonment, which are listed within California Code of Regulation, title 14 (CCR) section 1723 and associated sub-sections (for onshore wells), and section 1745 and associated sub-sections (for offshore wells).

There is no guarantee that a well abandoned in compliance with current Division requirements as prescribed by law will not start leaking in the future. Due to the inability to predict all subsurface conditions or changes, it always remains a possibility that any well may start to leak oil, gas, and/or water after abandonment, no matter how thoroughly the well was plugged and abandoned. CalGEM acknowledges wells plugged and abandoned to the most current Division requirements as prescribed by law have a lower probability of leaking in the future, however there is no guarantee that such abandoned wells will not leak.

CalGEM advises that all wells identified on the development parcel prior to, or during, development activities be tested for liquid and gas leakage. Surveyed locations in Latitude and Longitude, NAD 83 decimal format, and leak testing results should be provided to CalGEM. CalGEM expects any wells found leaking to be reported to CalGEM immediately.

PRC section 3208.1 gives CalGEM the authority to order or permit the re-abandonment of any well where it has reason to question the integrity of the previous abandonment. Responsibility for re-abandonment costs may be affected by the choices made by the local permitting agency, property owner, and/or developer in considering the general advice set forth in this letter. The PRC continues to define the person or entity responsible for re-abandonment as:

1. The property owner - If the well was plugged and abandoned in conformance with Division requirements at the time of abandonment, and in its current condition does not pose an immediate danger to life, health, and property, but requires additional work solely because the owner of the property on which the well is located proposes construction on the property that would prevent or impede access to the well for purposes of remedying a currently perceived future problem, then the owner of the property on which the well is located shall obtain all rights necessary to re-abandon the well and be responsible for the re-abandonment.

2. The person or entity causing construction over or near the well - If the well was plugged and abandoned in conformance with Division requirements at the time of plugging and abandonment, and the property owner, developer, or local agency permitting the construction failed either to obtain an opinion from the supervisor or district deputy as to whether the previously abandoned well is required to be re-abandoned, or to follow the advice of the supervisor or district deputy not to undertake construction that impedes access, then the person or entity causing the construction over or near the well shall obtain all rights necessary to re-abandon the well and be responsible for the re-abandonment.

3. The party or parties responsible for disturbing the integrity of the abandonment - If the

Docusign Envelope ID: 479C0BB4-5EE8-47D5-B748-A207B08656B8

well was plugged and abandoned in conformance with Division requirements at the time of plugging and abandonment, and after that time someone other than the operator or an affiliate of the operator disturbed the integrity of the abandonment in the course of developing the property, then the party or parties responsible for disturbing the integrity of the abandonment shall be responsible for the re-abandonment.

Should any wells require abandonment or re-abandonment, the responsible party must submit a Notice of Intention (NOI) to CalGEM through WellSTAR. The NOI form can be accessed in the 'Plugging and Abandonment' section of the following link: https://www.conservation.ca.gov/calgem/for_operators.

No well work may be performed on any oil, gas, or geothermal well without written approval from CalGEM. Well work requiring approval includes, but is not limited to, mitigating leaking gas or other fluids from abandoned wells, modifications to well casings, and/or any other re-abandonment work. CalGEM also regulates the top of a plugged and abandoned well's minimum and maximum depth below final grade. CCR section1723.5 states well casings shall be cut off at least 5 feet but no more than 10 feet below the surface of the ground. If any well needs to be lowered or raised (i.e. casing cut down or casing riser added) to meet this regulation, a permit from CalGEM is required before work can start.

CalGEM makes the following additional recommendations to the local permitting agency, property owner, and developer:

1. To ensure that present and future property owners are aware of (a) the existence of all wells located on the property, and (b) potentially significant issues associated with any improvements near oil or gas wells, CalGEM recommends that information regarding the below identified well(s), and any other pertinent information obtained after the issuance of this letter, be communicated to the appropriate county recorder for inclusion in the title information of the subject real property.

2. CalGEM recommends that any soil containing hydrocarbons be disposed of in accordance with local, state, and federal laws. Please notify the appropriate authorities if soil containing significant amounts of hydrocarbons is discovered during development.

As indicated in PRC section 3106, CalGEM has statutory authority over the drilling, operation, maintenance, and abandonment of oil, gas, and geothermal wells, and attendant facilities, to prevent, as far as possible, damage to life, health, property, and natural resources; damage to underground oil, gas, and geothermal deposits; and damage to underground and surface waters suitable for irrigation or domestic purposes. In addition to CalGEM's authority to order work on wells pursuant to PRC sections 3208.1 and 3224, it has authority to issue civil and criminal penalties under PRC sections 3236, 3236.5, and 3359 for violations within CalGEM's jurisdictional authority. CalGEM does not regulate grading, excavations, or other land use issues.

Should you have any questions, or if any wells are encountered that were not part of this letter, contact CalGEM at *916-322-1110* or via email at CalGEMNorthern@conservation.ca.gov.

Subject: Capitol Mall Office Buildings Demolition Project NOP (SCH# 2026030128) (SAC202603841)

Dear Stephanie Coleman:

Thank you for providing the Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) with the opportunity to review the Notice of Preparation (NOP) for an Environmental Impact Report (EIR) for the proposed Capitol Mall Office Buildings Demolition Project. This project is the demolition of three state-owned office buildings that have a combined gross floor area of approximately 729,700 square feet, to remove underutilized office space and allow for the future development of another use within these parcels. Please accept our comments below on air quality and climate considerations for project California Environmental Quality Act (CEQA) review.

Demolition
This project is jurisdictional to Sac Metro Air District Rule 902, *Asbestos*. Consistent with Rule 902, the Department of General Services must hire a Certified Asbestos Consultant to conduct thorough asbestos surveys of the buildings to be demolished; it must submit the surveys, demolition applications and associated fees in Sac Metro Air District's Online Services Portal, available on our website at www.airquality.org. Exact fees will depend on the type and quantity of asbestos identified in the asbestos survey. For questions about this process, please contact our asbestos staff at asbestos@airquality.org, or contact John Angi, Sac Metro Air District Compliance Supervisor, at jangi@airquality.org or (279) 207-1170.

CEQA Review
Please reference Sac Metro Air District's guidance on reviewing projects under CEQA, The Guide to Air Quality Assessment in Sacramento County (CEQA Guide) available on our website, in preparing the EIR. The CEQA Guide provides methods of CEQA analysis for project air quality and climate impacts, including methods of emissions quantification, thresholds of significance, and recommendations to mitigate significant project impacts. Reference CEQA Guide Chapter 5 for the analysis of toxic air contaminants including asbestos associated with demolition. The proposed level of demolition poses increased public health risk not limited to asbestos exposure.

- Sac Metro Air District recommends that the EIR include a project alternative for reuse of the existing buildings to meet future needs, or include a clear and thorough discussion of why reuse of the existing buildings cannot meet future needs.

- Sac Metro Air District further recommends that the EIR include a discussion of impacts associated with the landfilling, recycling, or reuse of demolition materials. These alternatives have climate and other environmental impacts. For example, recycling building materials can reduce Global Warming Potential compared to landfilling, but has the risk of inadvertently reincorporating asbestos into recycled materials.

The viability of Central City development is important to air quality because urban infill development is an important component of state and regional plans to reduce polluting motor vehicle emissions, including the Sacramento region's Metropolitan Transportation Plan (MTP) and Sac Metro Air District's Sacramento Regional Ozone Attainment Plan (OAP) and other plans for meeting federal and state air quality standards. Urban infill development has air quality and climate benefits including its relatively low generation of motor vehicle miles traveled (VMT) and resulting polluting emissions. Because there is currently no specified plan for use of the property after demolition, it has potential to lie vacant for a substantial amount of time post-demolition.

- Sac Metro Air District recommends that the EIR include analysis of potential impacts to implementation of plans such as the MTP and OAP, should the project area lie vacant for a substantial amount of time post-demolition.
- We further recommend that the EIR discuss project consistency with applicable local plans, including Policy LU.1.3 for Adaptive Reuse in Sacramento's Central City Specific Plan, and Policy LUP-10.1 for Existing Structure Reuse in the City of Sacramento 2040 General Plan.

Construction
When construction occurs on the project site, please note that all projects are subject to Sac Metro Air District rules and regulations at the time of construction. Please visit our website to find a list of the most common rules that apply at the construction phase of projects. All projects undergoing CEQA review must implement Sac Metro Air District Basic Construction Emission Control Practices, also available on our website, to use our non-zero particulate matter CEQA thresholds of significance.

Conclusion
Thank you for your attention to our comments. If you have questions about them, please contact me at mwright@airquality.org or (279) 207-1157.

Sincerely,

Molly Wright

Subject: **Capitol Mall Office Buildings Demolition Project / NOP / 2026030128**

Dear Ms. Coleman:

The Sacramento Municipal Utility District (SMUD) appreciates the opportunity to provide comments as part of the Notice of Preparation process related to the preparation of the Draft EIR for the Capitol Mall Office Buildings Demolition Project (Project, SCH 2023100615).

As a Responsible Agency, SMUD's review of projects include supporting the goals of our 2030 Zero Carbon Plan. This plan is a flexible road map to eliminate greenhouse gas emissions from our electricity production by 2030, which is the most ambitious goal of any large utility in the United States, while maintaining reliable and affordable service. This ambitious goal puts the Sacramento region on the map as an example to follow and a region where innovative, climate-friendly businesses want to be. As a community-owned, not-for-profit utility, our customers and community are at the heart of all we do. By pursuing zero carbon, we're helping create a cleaner and healthier region for all.

It is our desire that the Project will acknowledge any impacts related to the following:

- Overhead and/or underground transmission and distribution line easements. Please view the following links on smud.org for more information regarding transmission encroachment:
  - https://www.smud.org/en/Business-Solutions-and-Rebates/Design-and-Construction-Services
  - https://www.smud.org/en/Corporate/Do-Business-with-SMUD/Land-Use/Transmission-Right-of-Way
- Utility line routing
- Electrical load needs/requirements
- Energy Efficiency
- Climate Change
- Cumulative impacts related to the need for increased electrical delivery
- The potential need to relocate and or remove any SMUD infrastructure that may be affected in or around the project area

In reviewing the proposed Project, the existing SMUD facility impacts and estimated proposed service requirements are provided below which should be included in the EIR analysis.

- SMUD has an existing 12 kV network transformer vault (989V) located inside the building at 801 Capitol Mall. This vault is part of an interconnected network secondary system (grid) and serves multiple addresses outside of 801 Capitol Mall. *Consequently, SMUD will require up to two years' formal notice prior to the removal and/or demolition of this service.*
- SMUD has an existing 12 kV network transformer vault (8010V) located inside the buildings at 800 Capitol Mall. This vault serves other services located outside of the building, including, but not limited to streetlights and traffic and traffic signals. *Consequently, SMUD will require up to two years' formal notice prior to the removal and/or demolition of this service.*
- SMUD has an existing 12 kV network transformer vault (8010AV) located inside the building at 751 N Street.
- SMUD has existing 12 kV underground infrastructure/circuits along the west side of 9th Street from N to Capitol Mall that will need to remain in place.
- SMUD has existing 12 kV underground infrastructure/circuits along the south side of Capitol Mall between 8th and 9th Streets that will need to remain in place.
- SMUD has existing 12 kV underground infrastructure/circuits along the east side of 8th Street from Capitol Mall to the private alley just north of 751 N Street that will need to remain in place.
- SMUD has existing 12 kV underground infrastructure/circuits along the private alley just north of 751 N Street that will need to remain so long transformer vault 8010AV needs to remain in service.
- SMUD has existing 12 kV underground infrastructure/circuits along the south side of Liestal Alley between 8th and 9th Streets that will need to remain in place.
- Any unspecified demolition and/or removal of SMUD facilities may take up to a year.
- Any future/new development/buildings will be taking 12 kV network service. Please refer to SMUD Engineering Specifications T001 for additional information, including transformer space and placement requirements.
- Excavation and installation of additional underground circuits may be required along 8th Street, 9th Street, N Street, Capitol Mall and the Liestal Alley around and/or near the project site locations depending on the requested service size and service location.
- Additional impacts and changes to SMUD infrastructure and facilities not mentioned here, both on and offsite, may be required pending the final service and interconnection requirements for any future/new developments/buildings. This includes, but is not limited to, the requested service size exceeding the service capability of the 12 kV network system (e.g., primary metered service and/or dedicated primary and backup service capabilities, etc.) or other special considerations.

  Note: The estimated proposed facilities and requirements stated above are SUBJECT TO CHANGE pending final service requirements for any new construction.

SMUD is available should you have any questions regarding the comments above as well as discussing any other potential issues. We aim to be partners in the efficient and sustainable delivery of the proposed Project. Please ensure that the information included in this response is conveyed to the Project planners and the appropriate Project proponents.

Environmental leadership is a core value of SMUD, and we look forward to collaborating with you on this Project. Again, we appreciate the opportunity to provide input on this Project. If you have any questions, please do not hesitate to contact me at 916.732.7406, or by email at jerry.park@smud.org.

Sincerely,

Jerry Park

Subject: Notice of Preparation for the Capitol Mall Office Building Demolition Project

Dear Mr. Johnson,

On March 3, 2026, the Department of General Services (DGS) posted the Notice of Preparation (NOP) for the Capitol Mall Office Building Demolition Project with the California State Clearinghouse (SCH# 2026030128). We regret that the NOP was not provided to the City of Sacramento (City) concurrently with the State Clearinghouse posting.

A copy of the NOP is attached. Although the scoping period is identified in the NOP as ending on April 2, 2026, we would like to extend the period for receipt of comments from the City to April 20, 2026, to provide the City with the full 30 days otherwise granted to submit comments, if desired.

If the City would like to provide comments or pose questions regarding the project in a scoping meeting format, we would be happy to organize a virtual meeting/conference. Just let us know a preferred time and date before April 20, 2026.

If there are any questions, please contact the Department's consultant, Sean Bechta at Ascent (sean.bechta@ascent.inc; Desk: 916.930.3180; Cell: 916.494.4955). Or myself at stephanie.coleman@dgs.ca.gov Desk 916-376-1602; Cell 916217-6185.

Sincerely,

Stephanie Coleman

Hello Stephanie,

Thank you for reaching out and providing the City of Sacramento the opportunity to provide comments in response to the Notice of Preparation of an EIR for the Capitol Mall Office Building Demolition Project. I've received comments from our Dept. of Utilities and Dept. of Public Works Staff.

Comments from Utilities include the note that:

> The demolition of the structures will require the abandonment of any existing water services, if not proposed for re-use. FYI - Abandonment of water services are provided by the City of Sacramento Dept. of Utilities for a fee and required to be paid a minimum of 14 days prior to proposed abandonment. The future development of the site(s) will be subject to the Dept. of Utilities water, combined sanitary sewer, and combined sanitary sewer drainage development fees in place at the time.

Comments from Public Works include four specific comments in the attached letter and a request to be notified of future document publications and actions related to the project.

Please include our office too on future notifications related to this project.

Thank you.

Subject: Notice of Preparation (NOP) for the Capitol Mall Office Building Demolition Project

Hello Mr. Johnson,

As indicated in the attached letter, On March 3, 2026, the Department of General Services (DGS) posted the Notice of Preparation (NOP) for the Capitol Mall Office Building Demolition Project with the
California State Clearinghouse (SCH# 2026030128). We regret that the NOP was not provided to the City of Sacramento (City) concurrently with the State Clearinghouse posting.

A copy of the NOP is provided with the attached letter. Although the scoping period is identified in the NOP as ending on April 2, 2026, we would like to extend the period for receipt of comments
from the City to April 20, 2026, to provide the City with the full 30 days otherwise granted to submit comments, if desired.

If the City would like to provide comments or pose questions regarding the project in a scoping meeting format, we would be happy to organize a virtual
meeting/conference. Just let us know a preferred time and date before April 20, 2026.

If there are any questions, please contact me as the Project Manager for Ascent, who is serving as DGS's consultant for this project.

Thank you,
Sean

NOTICE OF PREPARATION

Date:	March 3, 2026
To:	Responsible Agencies, Interested Parties, and Organizations
Subject:	Notice of Preparation of an Environmental Impact Report for the Capitol Mall Office Buildings Demolition Project
Lead Agency:	State of California Department of General Services
Contact:	Stephanie Coleman, Senior Project Planner Department of General Services, Real Estate Services Division, Project Management and Development Branch Mailing Address: P.O. Box 989052, West Sacramento, CA 95798 Street Address: 707 3rd Street, 4th Floor, MS-509, West Sacramento, CA 95605 Phone: (916) 376-1602
Comment Period:	March 3, 2026 to April 2, 2026

PURPOSE OF NOTICE

The California Department of General Services (DGS) is the lead agency responsible for preparation of an Environmental Impact Report (EIR) for the proposed Capitol Mall Office Buildings Demolition Project (proposed project), located in downtown Sacramento on Capitol Mall and N Street.

Pursuant to provisions of the California Environmental Quality Act (CEQA), DGS has prepared this Notice of Preparation (NOP) for the proposed project. Once a decision is made to prepare an EIR, the lead agency must prepare a NOP to inform all responsible and trustee agencies (agencies) that an EIR will be prepared (CEQA Guidelines Section 15082). The purpose of this NOP is to provide agencies, interested parties, and organizations with sufficient information describing the proposed project and the potential environmental effects to enable meaningful input related to the scope and content of information to be included in the EIR.

PROJECT LOCATION

The proposed project involves demolition of three state-owned office buildings in downtown Sacramento located on Capitol Mall and N Street; the Employee Development Department (EDD) Headquarters at 800 Capitol Mall (this building has structures on both the 700 and 800 blocks of Capitol Mall but the address is 800 Capitol Mall); the EDD "Solar Building" Annex at 751 N Street; and the State Personnel Board Building at 801 Capitol Mall (see Exhibits 1 and 2, below). Locations for project support facilities that may be needed outside these parcels, such as for equipment parking or staging areas, have not yet been identified. The EIR will also consider, at a programmatic level consistent with Section 15168 of the State CEQA Guidelines, a potential future development scenario at the building demolition sites.

PROJECT DESCRIPTION

The project would involve the demolition of three state-owned office buildings that have a combined gross floor area of approximately 729,700 square feet (sf), including approximately 479,300 sf at the EDD Headquarters at 800 Capitol Mall, approximately 166,000 sf at the EDD Solar Building Annex at 751 N Street, and approximately 84,400 sf at the State Personnel Board Building at 801 Capitol Mall. The total project area is approximately 5.5 acres. The purpose of the demolition is for DGS to remove underutilized office space and allow for the future development of other uses within these parcels.

Upon completion of the demolition, the site is intended to be ready for construction of future uses. DGS has been in discussions with California State University, Sacramento (hereinafter referred to as Sacramento State or University) for the potential reuse of the site. DGS has granted Sacramento State a period of exclusivity to evaluate the redevelopment potential of the site and DGS may, but has not guaranteed to, ultimately transfer the site to the California State University (CSU) system for use by Sacramento State. The intent of the proposed project is to demolish the subject properties regardless of whether a transfer to Sacramento State occurs.

The University is in early stages of developing a program for the site and intends to eventually prepare a master plan development proposal. The current vision is a Downtown Sacramento campus of Sacramento State, with various uses being considered, including but not limited to a school of public affairs, student housing, event center, Artificial Intelligence (AI) center, hotel, indoor performing arts and music venue, market rate housing, ground floor retail, and structured parking, along with interim uses of the site (e.g., surface parking, temporary/modular construction). The Downtown Sacramento campus could include up to 6,000,000 sf of building space. Any future buildings would be subject to height limits, setbacks and other constraints prescribed by the Capitol View Protection Act.

Because the University has only identified a preliminary range of possible uses for the project site but has not yet developed specific plans, there is insufficient detail at this time to analyze future uses at a project level of detail in the EIR (see CEQA Guidelines Section 15161). Accordingly, as identified above, the EIR will evaluate the site's future development at a programmatic level consistent with CEQA Guidelines Section 15168. Once the future land recipient is confirmed and a more detailed development scenario is identified, the CSU or other appropriate lead agency is expected to prepare a separate CEQA analysis for that scenario.

RESPONSIBLE AGENCIES

For the purposes of CEQA, the term "Responsible Agency" includes all public agencies other than the Lead Agency that have discretionary approval power over the project (CEQA Guidelines Section 15381). Discretionary approval power may include such actions as issuance of a permit, authorization, or easement needed to complete some element(s) of the proposed project. It is anticipated that approval from various City of Sacramento departments will be required to complete planned building demolition, removal of demolished building materials, utility modification or abandonment in City streets, and similar activities. Where City approval may constitute a discretionary decision, it is expected that the City will use the EIR for the Capitol Mall Office Buildings Demolition Project to support these decisions. It is anticipated that building demolition will also require consultation with and concurrence from the State Historic Preservation Officer regarding historical significance and impacts of proposed redevelopment. Other agencies whose approval may be required for the project include but may not be limited to the Central Valley Regional Water Quality Control Board, California Department of Transportation, Sacramento Metropolitan Air Quality Management District, and Sacramento Municipal Utility District.

POTENTIAL ENVIRONMENTAL EFFECTS

The EIR will describe the direct and indirect environmental impacts of the Capitol Mall Office Buildings Demolition Project. It is anticipated that the EIR will address potential impacts associated with the proposed project for the issue areas described below. In addition, the EIR will evaluate cumulative impacts, growth-inducing impacts, and project alternatives. The EIR would evaluate the site's future development at a programmatic level as described above.

Land Use

The project site is located in downtown Sacramento; the demolition of the existing office buildings and future development of the site would not physically divide this community. The demolition project would not include development of new roadways/freeways/arterials, lengthy walls or fences, or other physical impediments to cross-community access. Although the project site is located in the City of Sacramento, the site is under the jurisdiction of the State; therefore, the project is not subject to city land use plans or zoning. Nonetheless, in addition to evaluating

consistency with the State's Capitol Area Plan, the EIR will discuss the project consistency with relevant City of Sacramento planning policies. There are no habitat conservation plans or natural community conservation plans applicable to the project area.

Population, Employment, and Housing

The EDD Headquarters building is in the process of being decommissioned and will be vacated in Spring 2026. The EDD Solar Building Annex is currently vacant. The State Personnel Board Building is currently occupied, and staff will be relocated to other existing DGS office buildings or commercially leased space. Removal of the office buildings would bring new demolition workers into the downtown area until demolition is complete. Given the proposed possible future uses of the site, including housing, site development could bring new employees and residents. Therefore, the EIR will include a programmatic analysis of the existing population and housing characteristics of the region and downtown area and potential effects of the project on population and housing, including the need for additional housing, effects on existing housing in the Capitol Area, and the effect on the local housing inventory.

Transportation and Circulation

The EIR will evaluate the project's demolition-period AM and PM peak hour trip generation and how the project may affect roadway, bicycle, pedestrian, and transit systems. Vehicle miles traveled (VMT) and access to the project will also be assessed. A programmatic analysis will be conduct

Utilities and Infrastructure

The EIR will identify and assess any utility modifications re e three buildings proposed to be demolished would be disc g and cooling to multiple State-owned buildings in the Capi related impacts to infrastructure and capacity of water sup drainage and stormwater, electricity, and natural gas at a e. Wastewater treatment and disposal for the proposed proj District's Sacramento Regional Wastewater Treatment Plan generated in the project area is conveyed to the SRWTP b wer system. The City of Sacramento is the water supplier for th e environmental effects of any new or modified utility infras nt of the project site.

The demolition of the structures will require the abandonment of any existing water services, if not proposed for re-use.

.

FYI - Abandonment of water services are provided by the City of Sacramento Dept. of Utilities for a fee and required to paid a minimum of 14 days prior to proposed abandonment.

The future development of the site(s) will be subject to the Dept. of Utilities water, combined sanitary sewer, and combined sanitary sewer drainage development fees in place at the time.

Air Quality

The proposed project site is located within the Sacramento Valley Air Basin (SVAB), within the jurisdiction of the Sacramento Metropolitan Air Quality Management District (SMAQMD), which administers local, state, and federal air quality management programs for Sacramento County. As is typical of construction and demolition projects, movement of equipment and wind over demolition debris and bare soils could generate airborne dust. Heavy equipment and vehicles would emit exhaust, including ozone precursors, particulate matter, and air toxics. The air quality analysis in the EIR will analyze air quality effects from the demolition activities and provide a programmatic assessment of potential future development consistent with SMAQMD's air quality screening criteria.

Greenhouse Gas Emissions and Climate Change

Demolition of the office buildings and future development of the site would generate greenhouse gas (GHG) emissions. Therefore, the EIR will quantify GHG emissions from building demolition and, programmatically, for future construction and operational activities (i.e., building energy, vehicle trips) associated with potential future

development. The GHG analysis will also include a qualitative discussion of any potential for the project to exacerbate the adverse effects of climate change, including increased risk of flooding associated with changes to precipitation patterns.

Energy

Demolition of the office buildings and future development of the site would require energy use. The EIR will estimate energy use and evaluate where implementation of the project could result in the inefficient, wasteful, or unnecessary consumption of energy during demolition and, at a programmatic level, operation of potential future development.

Noise

Implementing the proposed project would result in short-term and long-term increases in ambient noise levels. The EIR will include a description of the existing noise environment, including noise sources and sensitive receptors in the project area. The EIR will assess potential short-term (i.e., demolition/construction) and, programmatically, long-term (i.e., operational) noise impacts to sensitive receptors. Operational noise changes may be generated by proposed stationary sources such as ground floor commercial uses, emergency backup generators, HVAC equipment, and parking facilities, as well as mobile sources such as vehicle trips. Because future uses are as yet conceptual, operational noise will be evaluated at a programmatic level in the EIR.

Geology and Soils

No known faults or Alquist-Priolo special studies zones are located in or adjacent to the City of Sacramento; therefore, the proposed project site would not be subject to fault rupture. Project design for the future use of the site will be required to comply with applicable seismic building codes. Although future development would adhere to these construction standards, and the seismic risk in Sacramento is low, the risk associated with constructing future development at the site will be assessed programmatically in the EIR, including geologic and soils hazards such as liquefaction, expansive soils, and lateral spread. Soils exposed during demolition, construction, and grading can be susceptible to erosion and erosion potential will also be evaluated in the EIR.

Hydrology and Water Quality

It is anticipated that the project's principal water quality concerns will be related to demolition and construction activities, which could result in increased erosion and sedimentation associated with stormwater runoff. Urban contaminants such as oil, grease, heavy metals, and pesticides and herbicides from proposed development could also be present in runoff. The project would need to comply with the requirements of the National Pollutant Discharge Elimination System General Permit for Construction Activities, including preparation and implementation of a Storm Water Pollution Prevention Plan and site-specific erosion control measures and Best Management Practices. Because the project site is currently developed with impervious surfaces of various types (e.g., buildings, driveways, sidewalks), the project would not result in a substantial increase in impervious surfaces such that interference with groundwater recharge would occur.

Hazardous Materials and Public Health

Evaluations of the potential presence of hazardous materials are being prepared for the project and additional contaminant testing is being conducted, which will identify any known hazardous materials or sources of potential hazards (e.g., contaminated soil or groundwater, asbestos, lead paint) on the project site or vicinity. If present, hazardous materials could be released during demolition of the existing buildings and grading/earth moving during demolition and construction. The future use of the project site would not involve activities such as industrial or manufacturing uses that could generate hazardous emissions. However future uses at the site would involve the use

and storage of small quantities of hazardous materials, such as cleaning materials, commonly used at office and commercial locations. The routine transport, use, and disposal of such materials would be limited. Federal, state, and local laws regulate every aspect of hazardous materials transport, use, and storage. These regulations are designed to avoid significant hazards to the public and environment. Nonetheless, these issues will be analyzed further in the EIR.

Historical, Archaeological, and Tribal Cultural Resources

The project would demolish three buildings, two of which are known to be contributors to a historic district (EDD Headquarters and the State Personnel Board Building); the third, the Solar Building, will be evaluated for potential historical significance. The demolition and future redevelopment could also affect off-site historically significant buildings, including the adjacent Sutter Club and nearby Stanford Mansion. The EIR will use the results of a historical resources analysis to determine potential impacts to the existing buildings and the historic setting, and facilitate consultation with the State Historic Preservation Officer per Public Resources Code Section 5024/5024.5 addressing the treatment of State-owned resources. In addition, outreach to the Native American community will be conducted to solicit information on tribal cultural resources concerns or issues. There is potential for buried precontact and historic-era resources within much of downtown Sacramento, and potential impacts to these resources during project activities will be considered in the EIR.

Biological Resources

Sensitive biological resources are those protected by federal, state, or local resource conservation agencies and organizations. The project site is developed with urban uses and is not anticipated to support sensitive habitats or habitat for any special-status species. The EIR will disclose the common biological resources in the area, including vegetation and wildlife, and if identified, the EIR will evaluate the project's potential to impact common and sensitive biological resources.

Public Services

The Sacramento City Fire Department (SCFD) provides fire protection and emergency medical services to the project area, including state-owned office buildings. Demolition of the buildings will not require the need for additional services to the site, and it is assumed that any future development of the project site will be designed and constructed in compliance with all applicable fire protection regulations. The EIR will programmatically evaluate the potential impact of future development to the provision of police and fire protection services. Although it is anticipated that existing police services and facilities would be adequate to serve the future use of the site, the EIR will programmatically evaluate the future uses impact to law enforcement. The potential net increase in population in downtown Sacramento associated with the potential future use of the site will also be considered in programmatically evaluating the project's potential impacts to the provision of parks and recreation facilities and schools.

Aesthetics/Light and Glare

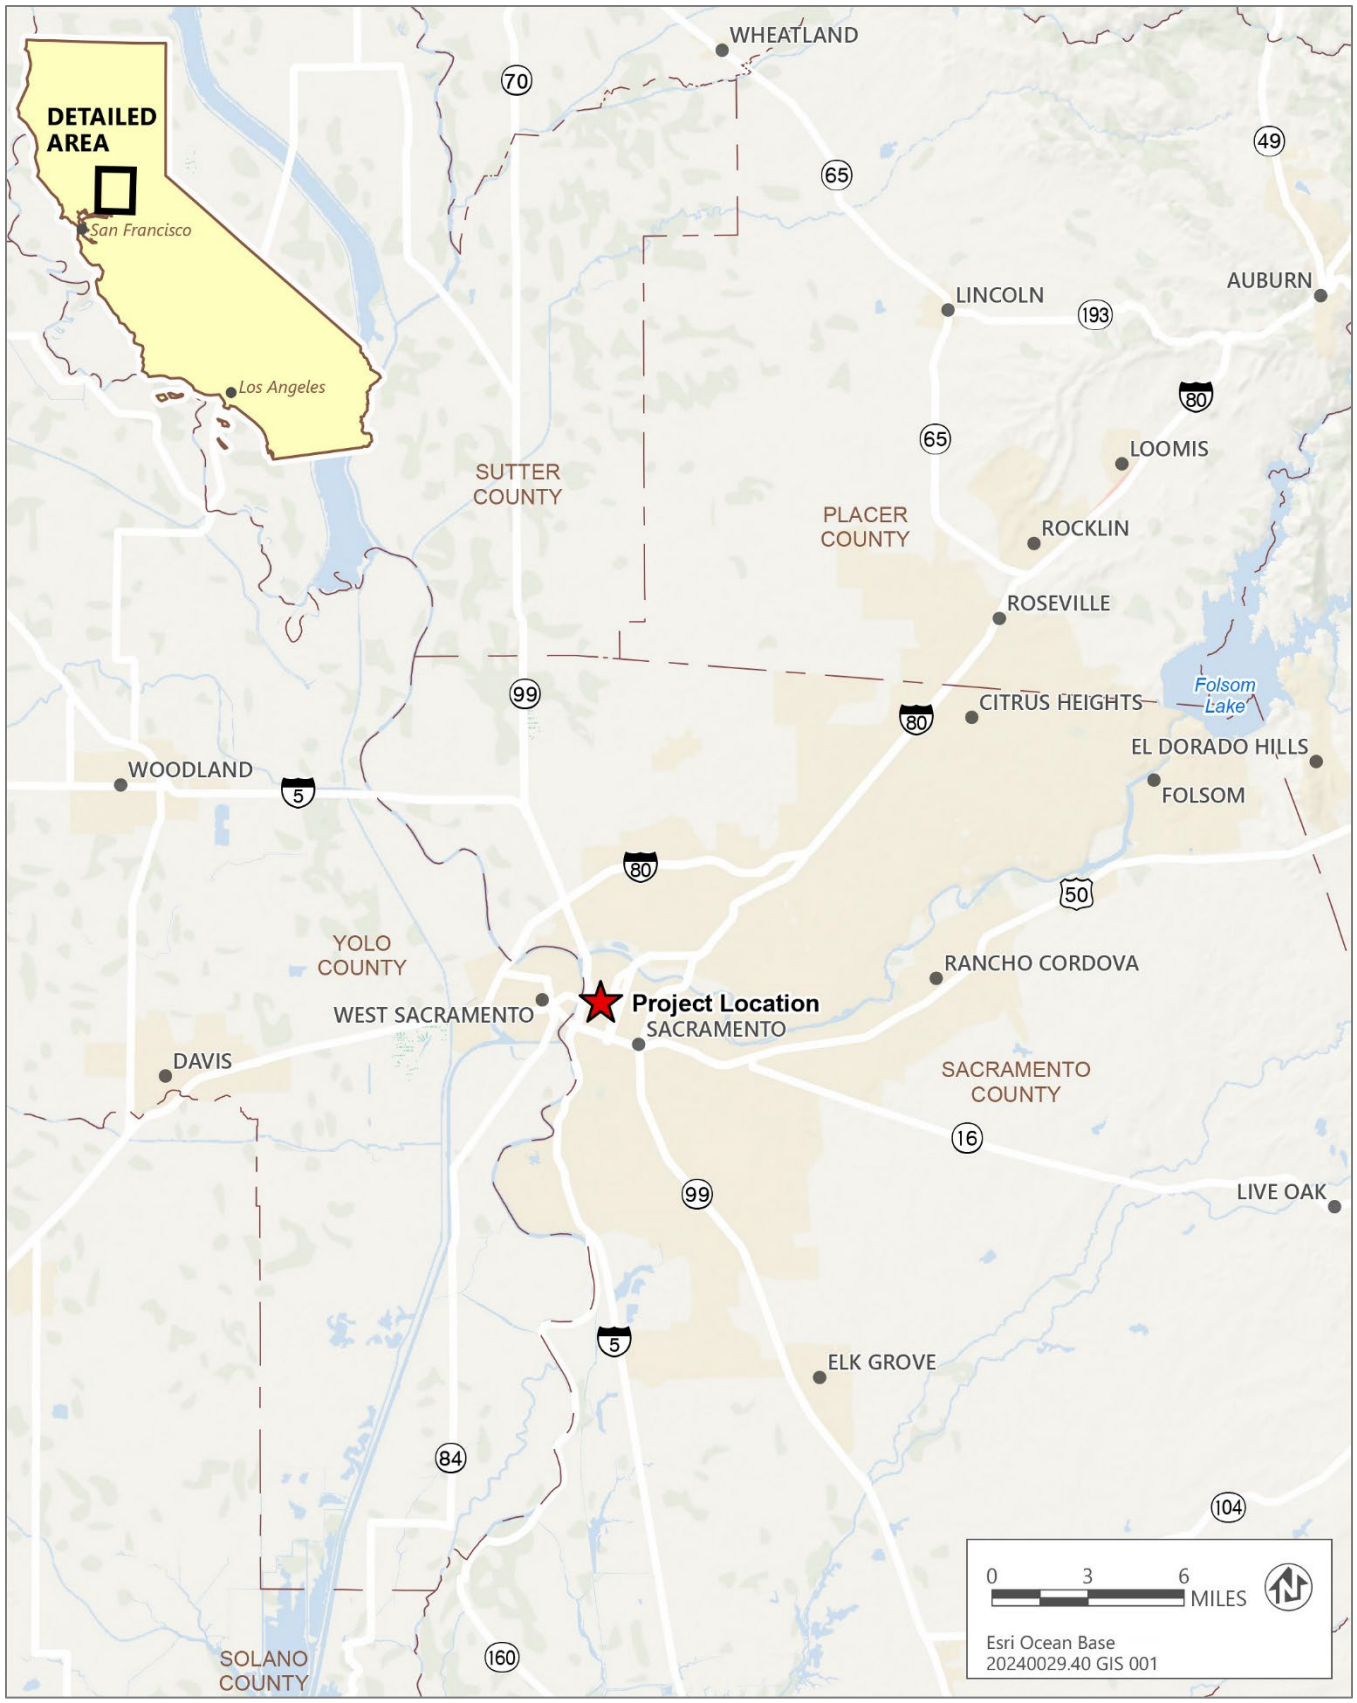
The proposed project site and areas that may be considered for related facilities are located in downtown Sacramento and are currently developed with urban uses. Demolition of the office buildings would be a temporary change to the visual character of the project area and will be evaluated in the EIR. The EIR will also programmatically evaluate the potential impacts of the future development of the site to the visual character of the developed downtown environment, including building heights, mass, and setbacks; tree removal; potential obstruction of important view corridors; any increase in light and glare or shadow effects; and compliance as applicable with the Capitol View Protection Act (Section 8162.5 et seq. of the Government Code).

Cumulative Impacts

Implementation of the proposed project could potentially result in significant impacts to the above resource areas. When considered together with the effects of past approved projects, other current projects, and probable future projects, the project's contribution to the cumulative effect of all these activities could be considerable. These conditions will be evaluated in the EIR.

Alternatives

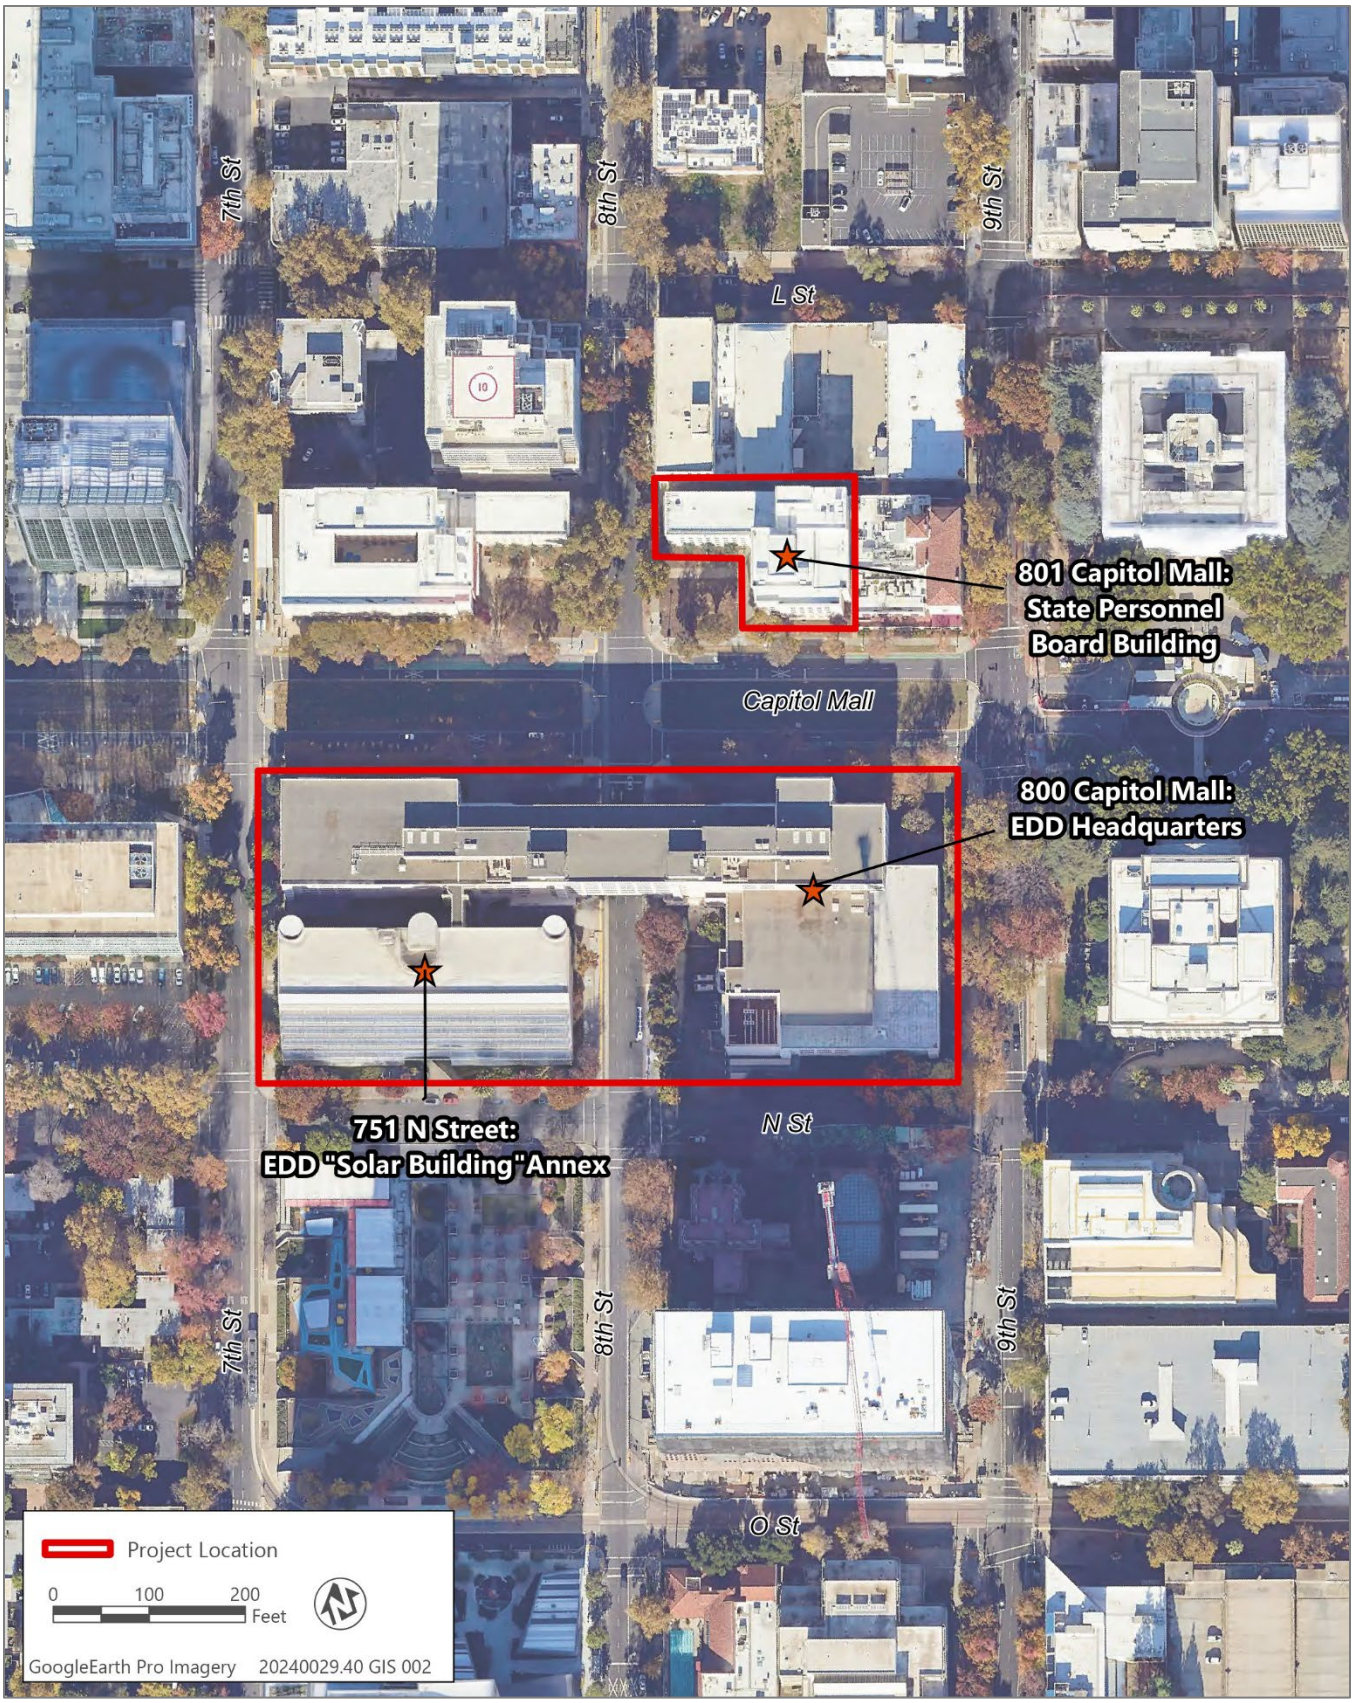
In accordance with the State CEQA Guidelines (14 CCR Section 15126.6), the EIR will describe a range of reasonable alternatives to the proposed project that are capable of meeting most of the project's objectives, and that would avoid or substantially lessen any of the significant effects of the project. The EIR will also identify any alternatives that were considered but rejected by the lead agency as infeasible and briefly explain the reasons why. The EIR will provide an analysis of the No-Project Alternative and will also identify the environmentally superior alternative.



PUBLIC REVIEW PERIOD

This Notice of Preparation is being circulated for public review and comment for a period of 30 days beginning March 3, 2026. A scoping meeting will be held from 4:30 PM to 5:30 PM on March 17, 2026 at the Sacramento Central Library, 828 I Street, West Meeting Room. Agencies and individuals are invited to attend the scoping meeting to obtain information about the project, ask questions of project team members, and provide comments. Written comments will be accepted by DGS through 5:00 PM on April 2, 2026. Comments must be delivered or mailed to Ms. Stephanie Coleman at the address listed above.

Copies of the full Notice of Preparation may be reviewed at the following locations:



- The DGS website at https://www.dgs.ca.gov/RESD/Resources/Page-Content/Real-Estate-Services-Division-Resources-List-Folder/Notices-Information-Resources-for-CEQA
- Sacramento Central Library at 828 I Street during library hours;
- Department of General Services, Environmental Services Section, between 8:00 AM and 4:30 PM; or
- Request a copy by email at environmental@dgs.ca.gov.

Your views and comments on how the project may affect the environment are welcomed. Please contact Ms. Stephanie Coleman if you have any questions about the environmental review process for the Capitol Mall Office Buildings Demolition Project.

SUBJECT: Notice of Preparation (NOP) of an Environmental Impact Report for the State Project on Capitol Mall, Sacramento, California

Dear Mrs. Coleman:

Thank you for including the City of Sacramento in the environmental review process for the project referenced above. The proposed project would involve the demolition of the existing (3) state-owned office buildings along Capitol Avenue at 800 & 801 Capitol Avenue and 751 N Street. The combined gross floor area for the proposed demolition is 729,700 sq. ft. DGS is demolishing the office buildings for future development unknown at this time. Potential development includes future buildings operated by the California State University, Sacramento; a programmatic level of review will be completed with this review, while a separate CEQA analysis will be prepared once a more detailed development scenario is determined.

City of Sacramento has the following comments which we would like to be addressed in the Draft EIR for this project:

1. The proposed project is required to comply with Sacramento City Code Section 12.20.020 to prepare a traffic control plan for any construction activities that may obstruct vehicular or pedestrian traffic on city streets. The plan is subject to review and approval of the City of Sacramento director of Department of Public Works. The City Code Section 12.20.030 outlines the minimum requirements for information that must

be provided in the traffic control plan. The traffic control plan shall also comply with the City's Criteria and Guidance to Accommodate Active Transportation in Work Zones Standard, dated 9/1/2025. The traffic control plan is subject to review and approval of the City of Sacramento director of Department of Public Works.

2. When a project provides access to parking garages and/or the project site, the location of driveways needs to be evaluated so that there will be no queuing and spill back to public streets.

3. The proposed project should take into considerations the changes into the circulation system due to the changes in the (3) demolished buildings and their new proposed uses. The interaction of those (3) buildings should be reviewed wholistically including any increased pedestrian activity across Capitol Mall between the buildings.

4. The City of Sacramento will be looking forward to see what improvements to the pedestrian, bicycle and transit system would be provided to improve all modes of transportation within the project vicinity given the close proximity to the light rail system.

Please provide our office with copies of any further actions regarding this project. We would appreciate the opportunity to review and comment on any changes related to this development and we would like to be included on early review of the proposed project site plan.

If you have any questions regarding these comments, please contact Alex Switzgable at (916)-808-7808 or by email at JSwitzgable@cityofsacramento.org.

Sincerely,

James Switzgable

1 PROJECT DESCRIPTION

This health risk assessment (HRA) evaluates the potential health risks associated with the removal of three existing state-owned office buildings in downtown Sacramento along Capitol Mall and N Street: the Employment Development Department (EDD) Headquarters at 800 Capitol Mall, the EDD "Solar Building" Annex at 751 N Street, and the State Personnel Board Building at 801 Capitol Mall as part of the Capitol Mall Buildings Demolition Project. The focus of this HRA is to evaluate the exposure of nearby off-site receptors to Toxic Air Contaminant (TAC) emissions associated with the building demolition component of the overall project. This HRA has been prepared to support the project's environmental review under the California Environmental Quality Act (CEQA).

The three existing buildings included in the proposed project would be demolished one at a time, with crews completing demolition of one building, and then moving onto the next building. Although the sequence of building demolition has not yet been determined, for the purposes of this analysis, it is assumed that the EDD Solar Annex Building would be removed first, then the EDD Headquarters Building, and then the State Personnel Board Building. Because this HRA evaluates the health risks associated with the process of removing all three buildings, and they would be demolished one at a time, the sequence of demolition does not affect the results of the analysis. The assumed demolition sequencing (or demolition phase), gross floor area by building to be removed, and haul trips associated with removing demolition materials in each phase are shown in Table 1.

Table 1 Proposed Demolition Phasing Plan

Phase	Building Removed	Timing	Demolition Workdays	Existing Building Area (sf)	Total Truck Haul Trips per Phase (one-way)	Total Truck Haul Trips per Phase (two-way)
1	Solar Annex Building	January to April 2027	86	479,300	2,004	4,008
2	EDD Headquarters	May to August 2027	87	166,000	694	1,388
3	State Personnel Board Building	September to December 2027	88	84,400	353	706

Notes: sf = square feet

2 METHODOLOGY

The project site is located in the City of Sacramento, therefore, the HRA follows the Sacramento Metropolitan Air Quality Management District's (SMAQMD's) latest CEQA and HRA guidance. Health risk parameters and calculations are consistent with the Office of Environmental Health Hazard Assessment's (OEHHA) latest 2015 guidance (SMAQMD 2013, OEHHA 2015).

This section is organized by first discussing the overall approach used to conduct the demolition HRA, and then addressing the specific inputs and calculation methods used to quantify the risks from project demolition.

2.1 HEALTH RISK ASSESSMENT APPROACH

The overall approach of the HRA follows SMAQMD guidance for source characterization and inventory, air dispersion modeling, receptor exposure, and toxicity evaluation for various TACs during demolition of the project. Inventories of TACs were developed for each air pollutant source. Source emission rates were calculated using estimated emissions and available source activity data. Air dispersion modeling with unit emission rates (i.e., 1 gram per second [1 g/s]) was conducted to obtain dispersed TAC concentrations using project-specific terrain and meteorological conditions. The unitized concentration of TACs were then scaled by the emission rates to obtain real TAC concentrations at receptors in the vicinity of the project site and truck routes. Health risks, including cancer risk, and chronic noncancer

risk at each receptor were estimated using TAC concentrations and their toxicity values (e.g., cancer slope factors, reference exposure levels [RELs]) provided in California Air Resource Board's (CARB's) Health Database. Each component of the HRA (e.g., source inventory and emission rates, air dispersion modeling, and risk impact calculations) are discussed in further detail in the following sections.

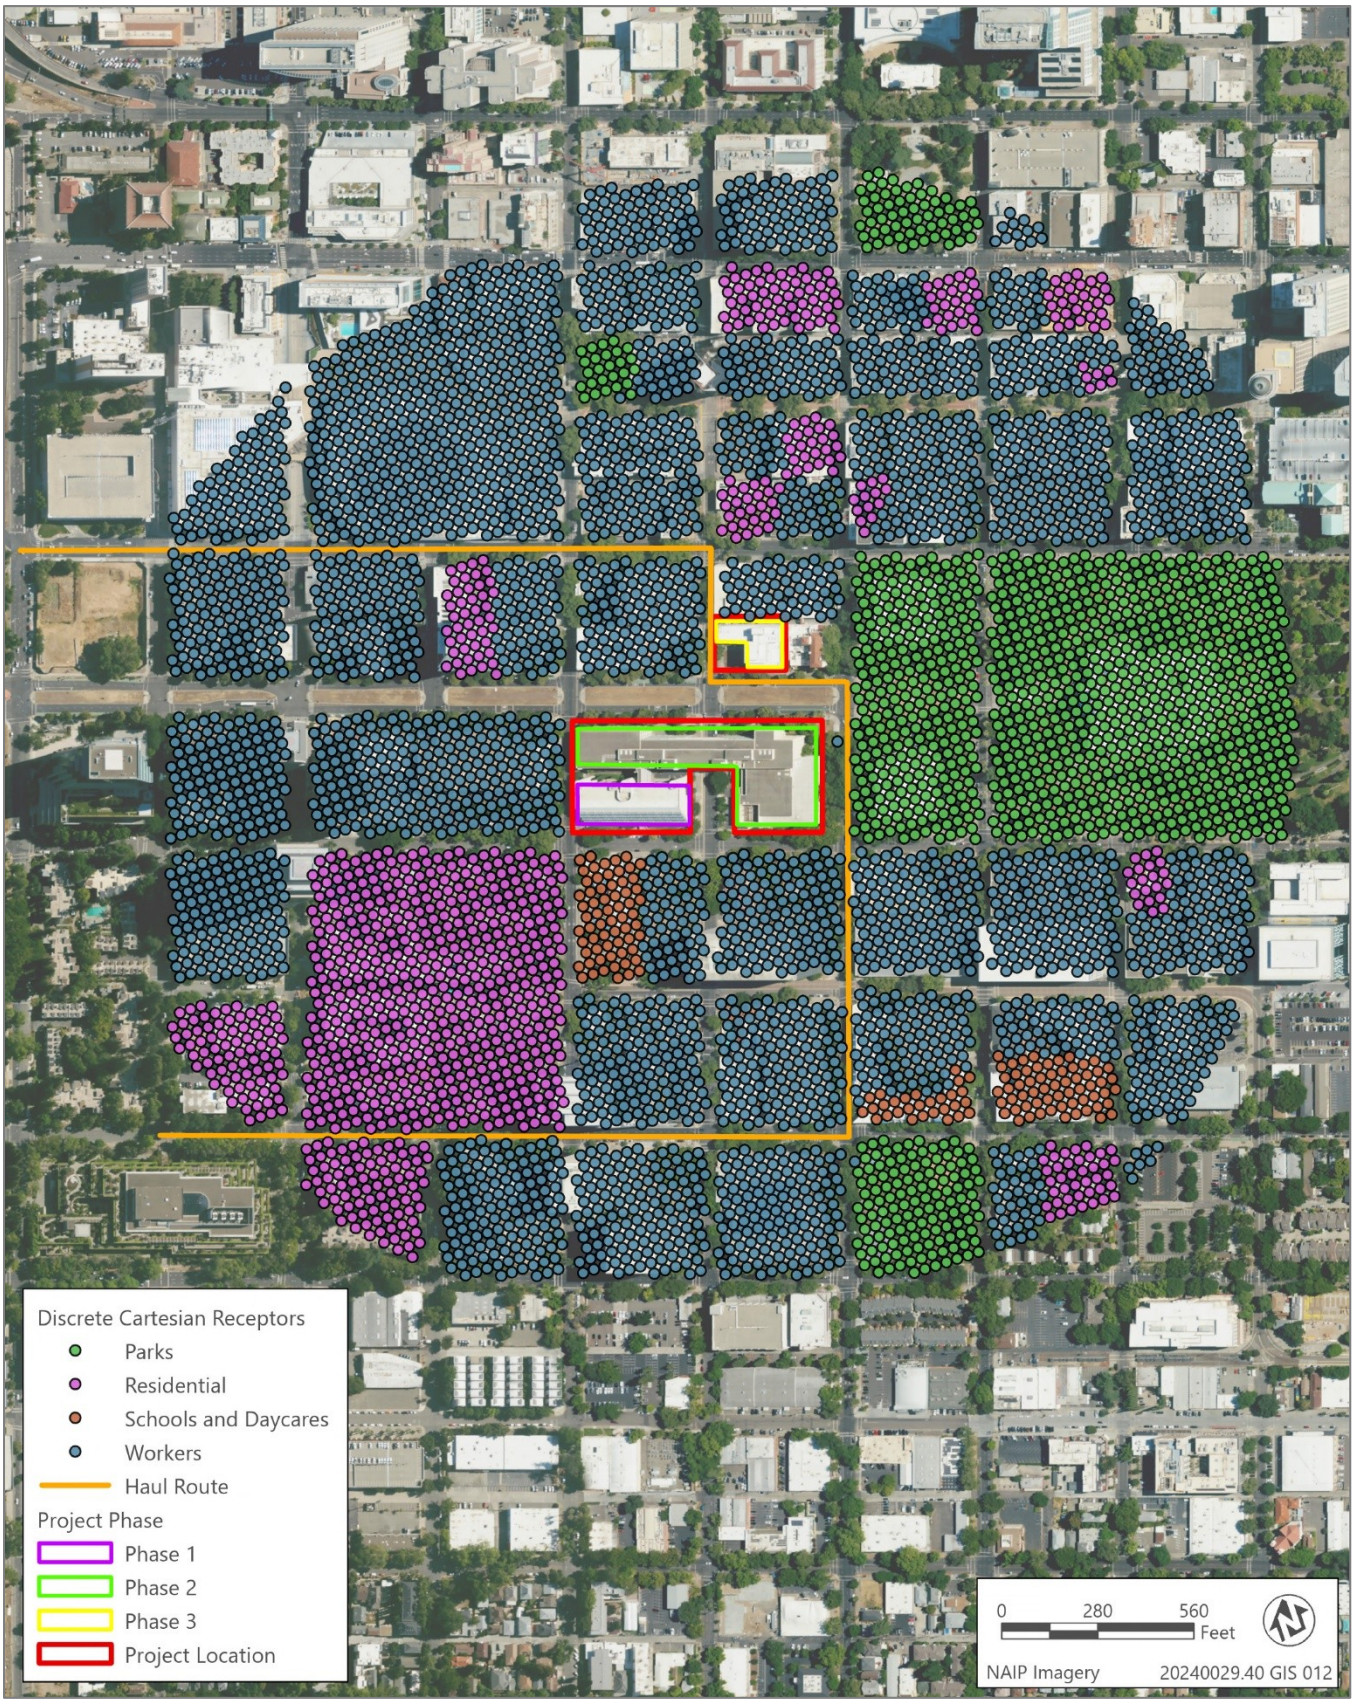
2.2 SOURCE INVENTORY AND EMISSIONS RATES

The primary demolition-generated TAC is diesel particulate matter (DPM) from diesel-powered off-road (construction/demolition) equipment, truck idling within the project boundary, and truck emissions associated with material deliveries and hauling both within the project site and along truck routes.

Table 2 lists the source types and configurations used for dispersion modeling. Figure 1 shows the locations of the modeled sources for demolition and the identified receptor grid (see discussion in subsection 2.3.4 Receptors for more details on receptor identification). The following subsections provide descriptions of the sources' activities and their TAC emission rates.

Table 2 Modeled Sources in AERMOD

Source	Source Type	Source Configuration
Off-road Equipment	Volume Sources	Release height 5 m, side length 15 m
Haul Trucks	Line-volume	Adjacent configuration, Plume height 6.8 m, plume width 8 m, release height 3.4 m
Onsite Water Trucks	Line-volume	Adjacent configuration, Plume height 6.8 m, plume width 8 m, release height 3.4 m



Notes: m = meter

Source: Data compiled by Ascent in 2026.

2.2.1 Diesel Equipment and Vehicles

Exhaust Particulate Matter with aerodynamic diameter of 10 micrometers or less (PM_{10}) emissions were used as a proxy for DPM emissions. Proposed demolition and the use of onsite equipment, haul truck deliveries, and usage of onsite water trucks would occur, were assumed to occur for 8 hours per workday, Monday through Friday. Thus, variable emissions were modeled to only emit pollutants during primary daily demolition activities from 9 a.m. to 5 p.m., Monday through Friday. Note that activities could occur, on a limited basis, during other hours of the day (e.g., earlier in the day or nighttime depending on specific project needs); however, primary activities would occur during these daytime hours, and therefore, more fine-tuned diurnal profiles cannot be determined at this time. Project-specific quantities and schedules of on-site equipment operation and on-road diesel vehicles were used and modeled using the California Emissions Estimator Model (CalEEMod). Construction equipment and haul trip emissions factors were based on CalEEMod defaults for the project region.

It was estimated that 3,051 total two-way truck trips (6,102 total trips) would be required to remove approximately 140,815 cubic yards (cy) of demolished materials from the project site. Based on previous DGS demolition projects, it was assumed that 70 percent of the truck trips removing material would be 60 cy truck/trailer combinations, 20 percent would be 40 yard trucks, and 10 percent would be 20 yard trucks. Because the specific route/direction haul trucks would take to dispose of demolished materials is not known at this time, two haul routes were modeled, one stopping at the Interstate 5 (I-5) freeway entrance at L Street providing access to I-5 north, and one stopping at the I-5 freeway entrance at P Street providing access to I-5 south. As a conservative approach and to not underestimate health risk impacts from haul trips at any singular receptor, it was assumed that all 6,102 haul trips could occur on each haul routes. Therefore, the modelling assumed that 6,102 haul trips used the L Street route, and an additional 6,102 trips used the P Street route. Thus, in the unlikely event that all project generated haul trips use just one of the identified haul routes, the modelling results provide emissions, exposure levels, and health risk results consistent with that worst case scenario. However, if haul trips are split among the two haul routes, which is much more likely, emissions, exposure levels, and health risk impacts per haul route would be less compared to what was modeled.

Source: Adapted by Ascent in 2026.

Figure 1 Demolition Sources and Receptor Locations

Modeled haul route-related mass emissions were adjusted based on the length of the haul route delineated in the air dispersion model to adjust emissions on a grams per mile of haul route basis. Each phase of demolition was modeled separately to calculate the emission rates associated with the specific equipment use and truck trips associated with each phase.

Table 3 lists the DPM sources during demolition and emission rate estimates. Detailed assumptions and calculations are presented in Attachment A.

Table 3 DPM Source and Emission Rates during Demolition

Source Name	Demolition Component	Annual PM_{10} Exhaust Emission (pounds per year)	Emission Rate (g/s)
SPBEQ	State Personnel Board Building Demolition Equipment	10.4	$1.91x10^{-3}$
EDDEQ	EDD Headquarters Building Demolition Equipment	11.5	$2.09x10^{-3}$
SOLAREQ	Solar Annex Building Demolition Equipment	10.2	$1.83x10^{-3}$
SPB_OM	State Personnel Board Building Onsite Water Trucks	$1.36x10^{-2}$	$2.49x10^{-6}$
EDD_OM	EDD Headquarters Building Onsite Water Trucks	$1.34x10^{-2}$	$2.43x10^{-6}$
SOLAR_OM	Solar Annex Building Onsite Water Trucks	$1.32x10^{-2}$	$2.38x10^{-6}$
SPB_NHAUL	State Personnel Board Building Northern Haul Route	0.95	$4.60x10^{-6}$
SPB_SHAUL	State Personnel Board Building Southern Haul Route	0.95	$5.49x10^{-6}$
EDD_NHAUL	EDD Headquarters Building Northern Haul Route	1.86	$8.95x10^{-6}$
EDD_SHAUL	EDD Headquarters Building Southern Haul Route	1.86	$1.07x10^{-5}$
SOLAR_NHAUL	Solar Annex Building Northern Haul Route	5.39	$2.55x10^{-5}$
SOLAR_SHAUL	Solar Annex Building Southern Haul Route	5.39	$3.05x10^{-5}$

Notes: g/s = grams per second; PM_{10} = Particulate Matter with aerodynamic diameter of 10 micrometers or less; Demolition sources are named for the site of demolition. Demolition emissions are the total of exhaust from off-road equipment and truck travel. Demolition schedule is 9 a.m. – 5 p.m., Monday through Friday.

Source: Data compiled by Ascent in 2026.

2.3 AIR DISPERSION MODELING

2.3.1 Approach

Dispersion modeling was conducted using CARB's approved American Meteorological Society/Environmental Protection Agency Regulatory Model Improvement Committee modeling system (AERMOD) Version 24142 using site-specific parameters (e.g., local terrain, meteorological data).

To determine the health risks and pollutant concentrations at specific locations (i.e., receptors), air dispersion modeling was conducted to generate the ground-level pollutant concentrations prior to risk calculations, using unit emissions rates (i.e., 1 g/s) as mentioned previously, for modeled sources and source groups. This approach is used so that the resulting ground-level concentrations (GLCs) can be easily scaled for various scenarios (e.g., default model runs, reduced emissions scenario) without running AERMOD multiple times. The GLCs from the AERMOD run at each receptor location were multiplied by TAC emission rates to obtain the actual GLCs for TACs.

2.3.2 AERMOD Model Configuration

The air dispersion modeling used standard regulatory defaults, including local terrain and urban dispersion parameters. Terrain in the project vicinity is generally flat. The area justified urban classification via Auer's (1977) land use technique, per US Environmental Protection Agency (EPA) guidelines (EPA 2017). Land use within 3 kilometers

(km) is mostly developed, urban areas in downtown Sacramento. Hence, urban dispersion coefficients were applied in the dispersion model. Summarized input parameters used in the model run include:

- Projected Coordinate System: Universal Transverse Mercator (UTM) zone 10N;
- Geographic Datum: World Geodetic System (WGS) of 1984;
- urban land use;
- period averaging of concentrations;
- unit emission rate of 1 g/s for all sources;
- Daily variable emission rates (8-hour active demolition period, daily); and
- US Geologic Survey North American Datum NAD 83 terrain data.

2.3.3 Meteorological Data

Sacramento International Airport meteorological station (Surface Station ID: 93225) is located approximately 9.5 miles northwest of the project site and has similar geography and meteorological conditions. The most recent available preprocessed data (2014–2018 data) were downloaded from the SMAQMD website. The most recent three years of data were used for dispersion modeling. The model used time-averaged atmospheric transport to estimate pollutant dispersion based on local winds. Concentrations were averaged over the period 2016-2018 for chronic health risk assessment and over 1 hour for acute risk assessment. The prevailing wind direction measured is south-southeast to north-northwest.

2.3.4 Receptors

Receptors are specific points within the project area where pollutant concentrations and potential health risks are assessed. As shown in Figure 1, a uniform grid was configured in AERMOD for the project following SMAQMD guidelines, with spacing of 10 meters, extending out 400 meters, and a flagpole receptor height of 1.5 meters. There is a total of 6,275 near-site receptors, among which 1,018 are residential receptors, 1,168 are receptors at parks, 154 are school and daycare receptors, and 3,935 are worker receptors. Figure 1 shows all receptors along with the project site and truck routes modeled.

2.4 RISK IMPACT ASSESSMENT

2.4.1 Health Risk CEQA Thresholds of Significance

According to SMAQMD, a project's impact on health risks would be considered significant under CEQA if the project-related increase in risks exceeded the thresholds shown in Table 4. Results of this HRA are compared to the SMAQMD-adopted thresholds of significance.

Table 4 Significant Health Risk Levels

Project-Level	Significance Risk Threshold
Cancer Risk[1]	10 in a million
Health Hazard Index[2]	1

[1] A cancer risk of 10 in a million represents the maximum lifetime excess cancer risk estimate (per million) at any individual receptor (OEHHA 2015).

[2] Health Hazard Index is the sum of the ratios of the average annual exposure level of DPM's Relative Exposure Level (REL).

Source: SMAQMD 2013.

2.4.2 Exposure Parameters

Exposure parameters were established according to the OEHHA guideline (OEHHA 2015) and are summarized in Table 5. Detailed model assumptions and HARP input are included in Attachment A.

Table 5 Exposure Parameters at Receptors

Risk Parameter	Residential Value	School Value	Park Values	Worker Values
Exposure Duration	1 year	1 year	1 year	1 year
Averaging Time	70 years	70 years	70 years	70 years
Starting Age	3rd trimester	2>16	0>2	16>30
Exposure Frequency[1]	0.96 (350 days per year)	0.16 (180 days at school, 8 hours per day)	0.08 (350 days per year and 2 hour per day)	0.24 (261 workday per year and 8 hours per day)
Fraction at Home	1	n/a	1	1
Daily Breathing Rate	OEHHA Derived Method	OEHHA Derived Method	OEHHA Derived Method	OEHHA Derived Method
Exposure Pathway	inhalation, dermal, soil ingestion, and mother's milk	inhalation, dermal, soil ingestion, and mother's milk	inhalation, dermal, soil ingestion, and mother's milk	inhalation, dermal, soil ingestion, and mother's milk
Deposition Velocity	0.05 m/s	0.05 m/s	0.05 m/s	0.05 m/s

[1] Exposure Frequency is the representation of time receptors will be exposed to DPM during demolition. The numeric value is the percentage of 8,760 total hours in a year the receptor would be exposed (e.g., Exposure of 24 hours a day for 350 days is 8,400 hours. 8,400 hours divided by 8,760 hours in a year equals 0.96).

Note: HRA = health risk assessment; OEHHA = Office of Environmental Health Hazard Assessment; m/s = meter per second; Starting Age: X>Y = X to Y years old (e.g., 2>16 is 2 to 16 years old). This is the convention used in the OEHHA guidelines to represent age.

Source: Data compiled by Ascent in 2026.

2.4.3 Risk Assessment Method

A spreadsheet, provided in Attachment A, was used to calculate the concentration of DPM and the associated long-term cancer and noncancer risks at each receptor.

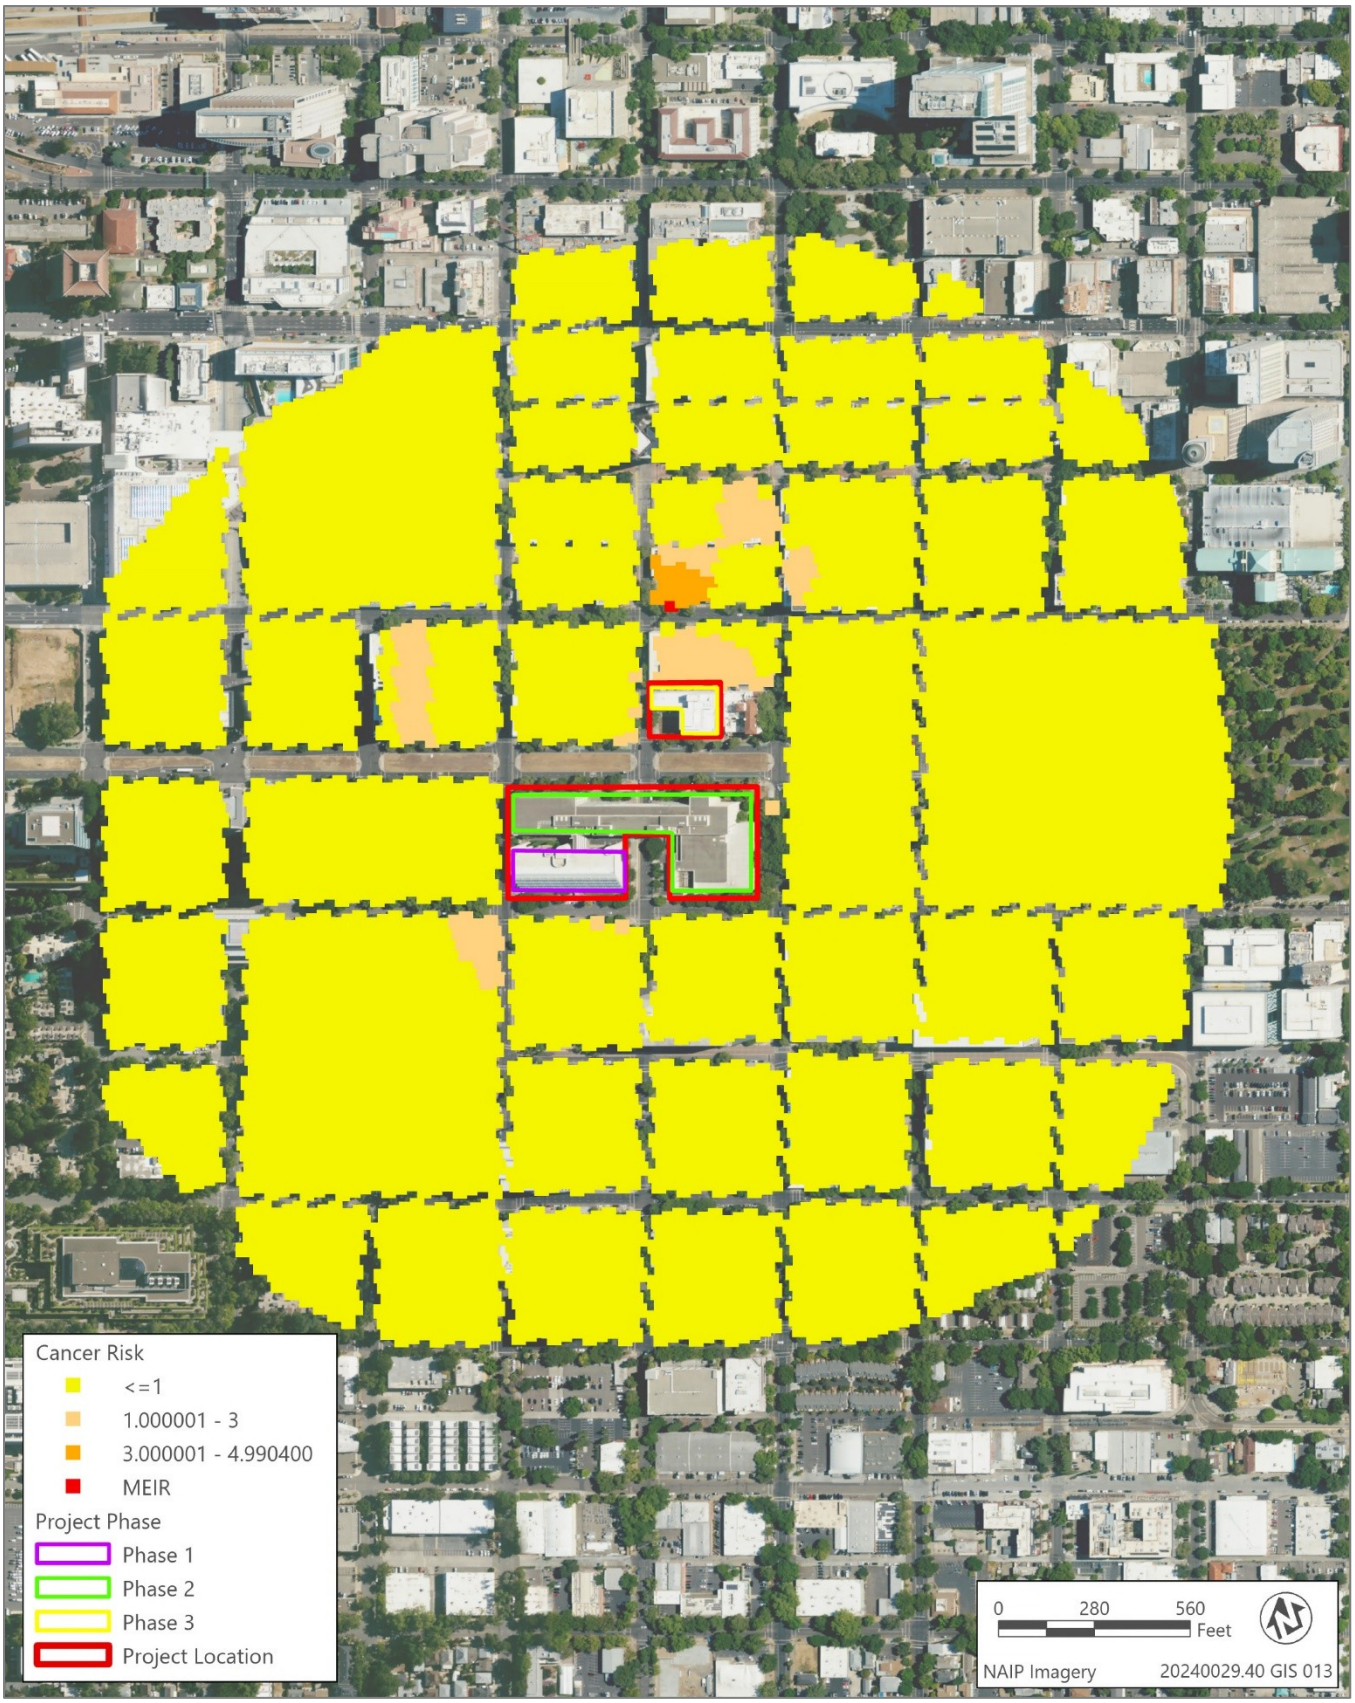
Cancer risks were calculated for each age group, using the maximum GLC of each phase, specified exposure duration (Table 5), OEHHA recommended age-specific exposure parameters, and a cancer slope factor of 1.1 micrograms of DPM per kilograms of body weight per day. The demolition risk is the sum of cancer risks over all age groups through the active demolition period. To estimate the noncancer health impacts from inhalation, a chronic hazard index (HI) of DPM concentrations at each receptor was calculated by dividing the GLC by DPM's inhalation REL of 5 micrograms per cubic meter. Detailed calculations and assumptions are included in Attachment A.

3 RESULTS

3.1 NONCANCER AND CANCER RISKS

Table 6 summarizes the cancer and non-cancer risks for the maximumly exposed individual receptors (MEIRs) and cancer risk is displayed in Figure 2. Noncancer risk impacts at all sensitive receptors are below the HI threshold of 1. The cancer risk of MEIR is calculated at 4.99 chances in a million. Considering SMAQMD threshold of significance of 10 chances in one million for cancer risk, the cancer impact of demolition would not be significant.

Table 6 Demolition Cancer and Non-Cancer Risks



Cancer Risk	MEIR	
	Cancer Risk (1/Million)	Health Hazard Index
Residential	4.99	<0.1
Parks	0.91	<0.1
Schools	0.22	<0.1
Workers	2.11	<0.1

Notes: MEIR = Maximum Exposed Individual Receptor, HI = Health Hazard Index.

Source: Modeled by Ascent in 2026.

3.2 CONCLUSION

As shown in Table 6, demolition would increase cancer risk at the MEIR between 0.22 and 4.99 chances in a million and would increase the non-cancer index by less than 0.1. Demolition would not expose nearby receptors to significant cancer risk nor chronic non-cancer risk and would not exceed thresholds presented in Table 4.
